Airmen Survey National Park

YORKTON, Sask., Sept. 30 (CP) — A pup named Pru, 16 Royal Canadian Air Force personnel and two yellow-colored aircraft today are engaged in Operation Duck—a project mapping out by air 6,500 square miles of the Riding mountain area from Park area in west-central Manitoba.

Large tracts of the area, about 120 miles northwest of Winnipeg are being mapped for the first time by Detachment No. five of No. 14 Photographic squadron, Rockcliffe, Ont. The detachment is using the airport at this town 100 miles northeast of Regina, as its base.

Flt.-Lt. J. M. Gibson, who served as a Spitfire pilot in North Africa, is in command of the unit. He said that on old maps of the area many lakes are marked upside down with short lines, and that reverse of their actual alignment.

Pru, a perky, police pup, the mascot of Duck, with 30 hours' flying time to his credit, has many was derived from the initials of the Photo Reconnaissance unit.

Economical Survey

Twin-engine Anson aircraft with cameras fitted in the nose are doing the job at a cost estimated at 1-10 of the former land survey methods. They cruise at about 130 miles an hour at an altitude of 12,000 to 13,000 feet and map several hundred square miles each day during clear weather.

Flying east and west over the area, the cameras take a shot every 20 seconds, making an "overlapping" strip picture of the terrain.

The undeveloped films are sent to Ottawa where they are processed and the strips fitted together to make the complete picture of the area. From this experts can identify types of rock and mineral formations, signs of oil beds, and whether trees are hard or soft wood variety.

The flying job is exciting for the pilot must keep the altitude of the plane within 50 feet of the specified level and the navigators must be accurately on his course to within a few hundred feet.

Duck is one of five R. C. A. F. detachments which are engaged in mines, fisheries, highways and forests federal departments.

The Girl From The Double R
By BETTY BLOCKINGER

CHAPTER IV

"They'll probably leave your ranch alone for a while," he was saying. "It would take a ouija board to tell where they'll strike next. Meanwhile, you keep off the range. When there are women involved, neither side can operate freely. Shortly after Rusty's talk with Doctor Westmore, she and Manny drove away.

"Gosh," breathed Manny, "he sure is one swell guy! Only he got more 'don't touches' around his spread. Don't touch this and don't go in there. There were tough guys there, too—that shed room, I mean."

"You—didn't hear anything, did you?" asked Rusty. Then, as Manny gave her a reproving look, "And don't look like that. If ever anyone was born to hear things not meant for his ears—"

"Yeah, but they were too careful," admitted her brother.

Fortified by a drug-store counter lunch, she left him at a motion-picture theater while she made the round of employment agencies in search of a cook to take Conchita's place.

Some of the reception clerks were polite; some laughed openly when she said she was looking for household help. The one or two cooks available demanded such exorbitant wages, Rusty couldn't consider them.

"You've got no better luck at the Cattlemen's Association. The secretary of the association shook his head. "Darned if I know why it's considered patriotic to assure our fighting men food; however, if we try to hold riders on the ranches when they want to go into war industries, we're accused of hindering the war effort."

Rusty went on with the doubtful assurance of "Anyone turns up, we'll send him on."

Manny, torn from an exciting reproduction of aerial warfare, boomers and machine gunning until Rusty demanded he be quiet.

"You're going to be drafted into the Double R Army," she told him, "and you're on CP anti-father notice. That wood box has to be kept filled, and the coal hod, and it's up to you to do much of Pedro's work. Feeding the chickens and the hogs and hoeing the garden!"

With Manny quieted by visions of his immediate future, Rusty's mind could return to the problem which had lain dormant throughout the day.

Doctor Herb Westmore. How could she become so interested in such a person? Yet she was. Even though she doubted him, the thought of him made her sing.

"Mecle Rowland, why did he dip through the tiny stream of the Little Sandy, and span along the road until the Big Sandy lay before him?"

"Gee, you sound happy," remarked Manny. "Guess you're in love. Doc says it affects some folks that way, makes them sing."

Rusty nearly stalled the old car in the middle of the Big Sandy. "Mecle Rowland, why did he say that? What had you said?"

"Oh, I just asked how a guy could tell whether or not his sister was going to marry a guy. I didn't mention no names, I just said I'd heard of a guy who'd heard another guy hop the question to his sister, and didn't know if she was ready for the fade-out or not because she told the guy was there was something missing, and when he asked what, she said 'mud in his hair.'"

"Manny!" wailed Rusty. "How—I mean, what did Doctor Westmore say?"

"Well, he sort of lit up, red-like. Then he began to sing, and then he said when people were in love, they sang. He said he could love a girl if he wasn't so busy. Would he mean by that? And why did he'd fight it sooner than involve her in—in—gosh, Sis, I don't remember what."

"Rusty doesn't matter," Rusty answered softly.

The lights of the ranch house glared the black hulk of the "Double R. More stars burst into the darkness when she drew up before the house. Rusty wondered if she had stumbled onto some celebration.

Decker appeared beside the car to open the door.

"Where on earth have you been? Jed you took Babe to Doc's farm? He said you weren't there nor had he!" "What?" demanded Rusty.

"After the furore he's started among the ranch girls where he said, 'I thought I'd better let him know you'd been chided, I asked to speak to my fiancée, told him she was and that I was calling from the Double R.'"

"Yes? There were sparkles in the blue-gray of Rusty's eyes. My fiancée not there, but she had made that same remark you did the other night, something about mud in my eye. Naturally, I hung up, and believe me, if we had other decent vet within five hundred miles, I'll never call him again."

"Imagine condemning a man for telling the truth," murmured Rusty, and, gathering up her new kitten, she started for the veranda.

Rusty found the house filled with neighbors, the men deep in argument in the living room, the women milling around in the kitchen.

"Community dinner," her mother told her as she entered the kitchen. "Each one brought something."

Rusty slipped into the pantry long enough to pick up a pitcher of milk. Then she carried her kitten out to a brooder pen.

"This will have to do you for the night," she said, tossing fresh straw into the little house at the end of the pen. "There's big business about, and I don't want to miss anything."

When she returned to the house, she went into the living room, to be greeted by a pause in the men's conversation.

"Well, Rusty," said her uncle. "We're organizing the ranch vigilantes."

Decker spoke up hotly. "They're trying to fight 1945 gangsters with 1845 methods."

"Your 1945 methods didn't keep above. Workmen secure severed section with ropes."

Reed Canary Grass

(Experimental Farms News)

Reed Canary grass (Phalaris arundinacea) is a hardy, long-lived perennial, characterized by its smooth, broad leaves and coarse stems. Under favourable conditions this grass may reach a height of from 6 to 8 feet and produce a yield of 2 to 4 tons of hay per acre, states F. S. Nowson, Division of Forage Plants, Central Experimental Farm, Ottawa.

This grass thrives best in moist locations which are low-lying and poorly drained. It will grow and thrive in water for considerable periods and grows particularly well where free water is near the surface of the soil. This grass, however, may be injured by deep stagnant water during the hot summer months. It is admirably adapted to fertile or fairly well decomposed peat and spreads by its underground stems.

Strangely enough, this moisture loving plant will withstand hot dry conditions on upland soils provided it is well established and there is plenty of moisture for early spring and summer growth.

Reed Canary grass is an excellent hay and pasture plant making its growth during the spring and continues well into the summer. It provides abundance of succulent and palatable fodder under conditions where other grasses fail.

The seed is very hard and should be sown shallow. On cultivated areas which dry out early enough in the spring a light winter crop may be produced. Broadcasting the seed quite satisfactorily, but may be sown thinly in drills 6 or 7 inches apart, or in rows 18 to 24 inches apart.

For good stands, 8 to 10 pounds per acre have been reported. Good results have been obtained by harrowing the heads with a combine and the rest of the stubble can be cut for hay in the usual way as the basal leaves remain green over a long period. For further information about this hardy grass, write the Division of Forage Plants, Central Experimental Farm, Ottawa, Ont.

Let's do it Together!

FROM GILBERT AND SULLIVAN down through the years to Rodgers and Hammerstein, many of the greatest successes in show business have been written by two men working together.

From apple growing to zinc mining, many a record of business success has been written by an able management working in close and constant co-operation with The Bank of Nova Scotia. Whether it's an old, established business or a new one just starting out, you'll find that this bank has the knowledge, the experience and the facilities that will help you to solve every financial problem. Just call the manager of the nearest Bank of Nova Scotia branch and say: "Let's do it together."

THE BANK OF NOVA SCOTIA

W. R. Adams, Manager, Charlottetown, P.E.I.

South Africa Has Black Markets

CAPE TOWN, Sept. 30 (CP) — South African authorities, striking against black market activities in food and other commodities, have revised control regulations to provide improvement without the option of a fine for persons convicted for the second time of profiteering.

Soap has become scarce in the Union and soap manufacturers have little hope of any immediate improvement. The soap industry is entirely dependent on an oil quota from an international pool and a trade ban imposed by the Indian government in protest against South Africa's Indian Land Tenure Act was believed chiefly responsible for the soap shortage.

Dr. Hendrik van Eck, director of food supplies, appealed for increased food production for the relief of millions of South Africans who were not receiving enough food to supply sufficient energy for working. He said large-scale experiments were under way to utilize corn meal with yeast and that the fortified meal would be produced in large quantities if the experiments were successful.

Financial relief for sugar beet growers was forecast by the Rand Daily Mail as another step toward increasing production. The Board of Trade, which investigated the sugar beet industry, has submitted recommendations for the relief of the planters.

A 10 percent out in the sugar quota to distributors was put into effect because of drought conditions in Natal and grave shortages are feared for next year unless conditions change. There has been no appreciable infall in the sugar belt since March.

The government has called for bids from private airlines which propose to establish feeder services to supplement eight trunk routes now operated by South African Airways, a government airline.

The government proposes to grant licenses to private operators.

Will Visit Quebec

NEW YORK, Sept. 30 — (AP) — Prince Charles De Bor, Archduke of Austria, arrived here today by air from Amsterdam and said he was en route to Quebec to visit the Empress Zita of Austria.

The Prince plans to remain three or four months in Quebec, after which he will go to France for an indefinite stay, he said.

BUNGAY, Suffolk, England — (CP) — Suffolk coast holiday-makers are leaving the beaches to help harvest grain.

for DANDRUFF

and Falling Hair, use Minard's exactly as you would any hair tonic. Do this 4 times a week and the result will be a Clean Head and Glossy Hair.

MINARD'S "KING OF PAIN" LINIMENT

Learning languages is fun in modern junior classrooms.

The school had its pupils build a tiny grocery store right beside the blackboard with bilingual signs, products on the shelves, etc. The pupils became grocers and customers, taking and giving orders by phone as in-person, all in French. In this scene from the National Film Board production, "Small Fry," a Canada Carries On release on child welfare fare in Canada, customer Ross Brophy (left) asks "epicure" Edward Tremblay for "carottes." The sequence was filmed in the St. Anne's High School (a misnomer since classes range from kindergarten to first year university). The classroom grocery store not only teaches languages in a practical way but subtly advises the children on nutrition, shopping manners, grammar, proper use of the telephone, weight and measures and many other incidental necessities.
