Tasmania

TASMANIAN RAZOR BLADES

The production of safety razor blades, which are likely to command a ready sale on the Australian market, has been commenced in Tasmania. The factory which has been established at Hobart is producing several thousand blades a day. The blades are manufactured from specially imported high-grade Swedish steel, and it is claimed that the product will be at least equal to the best imported razor blades. The Australian market absorbs about 1,000,000 blades weekly, and the Tasmanian venture hopes eventually to secure the whole of the Commonwealth market, as well as that of New Zealand and other countries.

TIMBER INDUSTRY REVIVAL

Improvement in the timber trade in Tasmania has brought about increased activity in the saw-milling industry in the State, and there are now twice as many mills operating as there were a year ago. In the North and North-east of the State, over fifty mills are in operation, compared with twenty at the beginning of 1932. The benefit of the revival has not been felt to the same extent in Southern Tasmania, but there are nearly twenty mills working in the fertile Derwent Valley (near which the paper pulp industry is being established), and the outlook is brighter than it has been for a considerable time. An improvement in the building trade in the other Australian States has been the forerunner of increased activity in Tasmanian saw-mills. The improvement does not mean a boom in the industry, but it does represent a tendency towards normal conditions, after the abnormal period of the last two years.

HIGH QUALITY EGG PULP

Recent shipments of Tasmanian egg pulp have been declared by London experts to be "equal to the finest grade of Chinese," which is the highest estimate essential for the future of this young industry. Hitherto Chinese egg pulp has been regarded on the London market as the best obtainable, and is so well-known that it has held priority on the market. Nevertheless, the Tasmanian egg pulp marketed in London has sold satisfactorily at prices as high as those realized by the Chinese. The Tasmanian product has the advantage of being free of duty, whereas Chinese pulp is subject in Britain to a 10 per cent. impost.

CARRIAGE OF FRUIT

A development of great importance to the Tasmanian fruit export industry has been the experimental shipment made recently to Europe in a chartered Dutch ship. The fruit was carried by the non-refrigerating system on the upper decks of the vessel. If the experiment succeed, no doubt further shipments will be made in similar circumstances. The scheme was adopted as a means of augmenting the shipping space available for the heavy crops this season. Special keeping varieties of apples were selected, and if it can be proved that the hardest of varieties can be carried successfully in this manner the benefit to Tasmania will be great. On previous occasions apples have been carried without refrigeration for long distances in Australia, on journeys that have occupied as long as two weeks, and it is hoped to extend this period to four or five weeks. Success will mean the development of a valuable market in Holland.

TOURIST TRAFFIC BENEFITS

Tourists and other travellers have not been slow to avail themselves of the facilities made available to them in consequence of the temporary concessions granted by the Commonwealth Government to overseas shipping companies to engage in the passenger trade between Tasmania and other Australian States. The relaxation of the prohibitive Navigation Act provisions

has undoubtedly stimulated the Tasmanian tourist traffic, and local trade has benefited considerably. Ships which were previously debarred from bringing passengers to the State have landed many hundreds of travellers at Hobart, and in addition tourists have visited the port in transit in even larger numbers. Incidentally, a record for Tasmania was established when the palatial liner Starhaver (22,547 tons) visited Hobart. She is the largest vessel that has traded with Australian ports, and had on board over 1000 passengers, the majority of whom were making a round trip from Sydney and Melbourne. The visit of the Starhaver resulted in a considerable stimulus to business in Hobart. In the one day that the vessel was in port the city benefited by the expenditure of nearly £2000. Each overseas liner brings over 100 passengers to Hobart.

PAPER PULP

Since the passage of the legislation granting concessions over large areas of heavily-timbered country in the Florentine Valley, in Southern Tasmania, to a syndicate which intends to undertake the manufacture of paper pulp, a large amount of preliminary basic work has been carried out. Many difficulties had to be overcome, and, in spite of the vast amount of technical work, the company is convinced that a further experimental programme at an estimated cost of £50,000 must be undertaken. During the last two years there have been important developments in the design of mechanical pulping machinery. New machines of greater efficiency have been developed for use with soft woods, but it cannot be said with any certainty that they would be suitable for use with the Tasmanian hardwoods. A shipment of logs is, therefore, to be sent to Europe for the purpose of making comparative tests to determine which type of plant should be purchased. Tentative arrangements have been made for the tests to take place in Sweden and Switzerland. They may possibly be followed by a paper-making test in Europe, under actual milling conditions.

AMALGAMATION LIKELY

In addition to the work in the Florentine Valley areas the strong likelihood of the reopening of the plant at Kermangie, in another part of Southern Tasmania, has received prominence. The Kermangie plant was opened three or four years ago by another company interested in the production of paper pulp, and, although the early experiments were promising, the company was unable to obtain the necessary capital to put the scheme into operation. Experiments have been continued, and it is now stated that the organizations interested in launching the industry in Tasmania are likely to amalgamate.

IMPROVED FINANCES

Although Government expenditure for the first eleven months of the financial year ending June 30, 1933, exceeded revenue for that period by £112,500, Tasmania's position shows an improvement compared with the last financial year, when the excess of expenditure for the corresponding eleven months was £298,000. Revenue to May 31 this year totalled £2,235,000, an increase of £97,000, compared with an estimated increase for the twelve months of £48,000. The deficit for the year is expected to be £50,000.

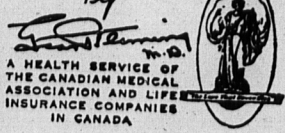

REGULATING COAL OUTPUT

A committee has been appointed by the Government to prepare detailed proposals for the stabilization of output and prices and regulation of the opening of new collieries and to foster the export trade.

MORE DAIRY SCHOOLS

The Government has arranged for short schools of instruction in dairy science to be held next month at a large number of rural centres. THE UNIQUE BARRIER REEF. The immense popularity of the wonderful Barrier Reef and the hundreds of islands dotting the

HEALTH

DANGER

The months of August and September are the most dangerous months for babies. This is the time of year when large numbers die from summer diarrhoea, popularly known as "summer complaint." The number is not so great as it used to be, but it is still large—over five thousand each year in Canada.

It is startling to think that in this country, over five thousand homes, each year, experience the sad loss of the newest member of the family group as the result of summer diarrhoea. By far, the greatest number of these deaths occur in August and September.

That is why we cry "Danger!" to the babies' parents, because we want to warn them that there is a very grave danger at this season. We warn them of danger, not just to frighten them, but to impress on them the urgent need for extra and special care in order that the life and health of the babies may not be threatened.

Fortunate is the baby who is being naturally fed. In addition to all its other advantages, breast-milk is sterile, and because it does not require to be handled or prepared, there is no danger of its being contaminated. For these reasons, the breast-fed baby is protected in so far as his milk needs are concerned, and the result is that comparatively few breast-fed babies develop summer diarrhoea.

The milk for children who are bottle-fed or who have been weaned should be safeguarded the year round, but in summer, extreme care must be given it. In the first place, a pure, clean milk should be purchased, which practically means pasteurized milk. Upon delivery, the milk should be placed on ice, without delay, and it must be kept cold until it is used. It is also essential that the milk be covered so as to keep out all dirt and to prevent flies or any insects from gaining access to it.

During the hot weather, the baby should be kept clean, as should be everything with which he comes in contact. Keep him cool with cool baths and a minimum of clothing on hot days, adding more clothes when the day or evening is cooler. Babies, like adults, need more water on hot days, and they should frequently be offered cool, unsweetened water to drink between feedings. There is no occasion for worry if the baby takes less food during a hot spell, but if diarrhoea starts, the doctor should be sent for at once. Delay is dangerous and is often fatal, as is evidenced by the deaths of over five thousand babies each year.

Questions concerning Health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered personally by letter.

KITTEN HAS SIX LEGS

MANFIELD, O., Aug. 21.—A six legged kitten owned by Alex. Oates, of Willard, north of here, walks with its extra pair of legs near the front of its body touching the ground. Except for a peculiar gait, the kitten is healthy and normal. Oates says.

Hinchbrook Channel, particularly around the Whitsunday passage, is rapidly growing. Each year increasing numbers of tourists from overseas visit this wonderful playground. A definite move has now been made to enhance the pleasures and comforts of visitors. An influential company has secured leases of several islands, and arrangements are being made for the provision of guest houses—probably elaborate log huts—on the islands. Each island will have a motor launch service so that visits to places of interest may be quickly and economically carried out. The islands will be in touch with the mainland by wireless.

A VALUABLE DISCOVERY

The horticultural industry will hail with much satisfaction the valuable discovery made by the Dominion laboratory of plant pathology at Saanichton, B.C., that narcissus bulbs can be sterilized effectively against their most destructive parasites, the bulb nematode and the larvae of the bulb fly. Up to the present, ordinary immersion treatments experimented with by pathologists the world over have had little effect, owing to the failure of the disinfectant to reach the deeply penetrated parts of the bulbs invaded by the parasites. However, this problem has been solved by the Dominion pathologists. An investigation against nematodes and their influence upon bulb growth led to the selection of a silver nitrate solution as a promising disinfectant, but, owing to the instability of silver nitrate in the presence of chlorides and other substances in tap water and in the dirt clinging to bulbs, its use had no commercial possibilities. However, when silver salt was combined with potassium cyanide, in the ratio of one to three by weight, an effective solution of satisfactory stability was obtained. Forced into the narcissus bulbs by an evacuation process, the solution destroyed the bulb nematodes and bulb fly larvae without significant injury to bulb growth under greenhouse conditions, and with no evidence of injury in the field tests to the foliage or bloom. The discovery is of great value to commercial growers.

Queensland

MORE BUILDINGS

Activity in building has been notable. During the month a fine new seven-storey building, costing over £90,000, erected for the Shell Company, was opened, and many other large buildings in the city are nearing completion. The City Council is about to erect a wool store on the river front at a cost of £57,000. Rain is still badly needed in the Western district where farmers and graziers are experiencing an anxious time. On the coastal belt, however, good rains have been recorded which have greatly benefited dairy farmers.

GOLD YIELD INCREASED EIGHT-FOLD

There is still marked activity in gold mining, and the records for the first five months of the year to May 31 show that this year's yield is nearly eight times that of the corresponding period last year. The total gold yield for the State for the five months in 1933 was 32,723 fine ozs., compared with 4484 fine ozs. for the corresponding period of 1932. Gold has been won in many parts of the State, but the principal contributor in May was the new field at Mt. Coolon, where 2907 fine ozs. were won.

LINKS WITH THE ISLES OF BEAUTY

There is a strong agitation in Brisbane for better means of communication between the various Islands of Moreton Bay. A few facilities have occurred during the

past year or so, and it is felt that the establishment of a launch service calling periodically at the chief islands would be of great value in stormy weather. Among other suggestions is the maintenance of a lifeboat service to operate from Southport, one of the chief seaside resorts of South Queensland. There is also a proposal on foot for the provision of a boat harbour at Redcliffe, a popular seaside resort 2½ miles from Brisbane.

INCREASED TIMBER REVENUE

The Forestry Department reports an increase in timber revenue as compared with a year ago. The figures for May last were £132,381 compared with £69,050 for May 1932. The quantities of three-ply and veneer as well as decorative woods exported show a gratifying increase.

"Your methods of cultivation are hopelessly out of date," said the youthful agricultural college graduate to the old farmer. "Why, I'd be astonished if you got even ten pounds of apples from that tree."

"So would I," replied the farmer, "It's a pear tree."

TENDERS

The Misses Robertson of Summerside offer for sale by tender their valuable property on Poplar Avenue. This property which was formerly occupied by Mr. Justice Arsenault, consists of a large house with all modern conveniences, a large orchard, and a lot containing one acre of land. Tenders will be received at the office of F. E. Doiron, Solicitor, Summerside, up to noon on August 31st, instant. The highest or any tender not necessarily accepted.

THE VI-TANG GINGER ALE DRAWING

Will take place on Thursday at the Exhibition. All winners of free cases are eligible to compete in the draw for the Grand Prize, your chance of a Pony, a Silver Fox Scarf or
