THE FOUR SOME SET

Howie Morenz Feted By His Many Admirers at Montreal

MONTREAL, May 18.—Friends and admirers of Howie Morenz gathered last week at the Club Canadien de Montreal, Sherbrooke east, to do honor to the man whose meteoric speed, general effectiveness and sportsmanlike bearing as a centre ice player of the Canadian Hockey Club has earned for him a reputation second to none in the game. As is natural at such an affair, praise for the guest of honor was the essence of every speech, but in each there was a note of earnestness and wholeheartedness that raised them above the ordinary eulogy. Leo Dandurand, director of the Canadian Hockey Club, proposed the toast to Morenz. Mr. Dandurand, in addition to speaking highly of the playing ability and unassuming manner which have made Morenz the idol of the fans, stressed his unflinching fidelity to the club ever since joining it in 1923. The modest Morenz in reply, stated that while at the time it was with some misgivings that he quitted the amateur ranks for the professional, his treatment at the hands of the Canadiens had been such as to more than justify the jump.

As tangible evidence of the esteem in which he is held, Morenz was made the recipient of a handsome set of glassware. Riley Hern, himself a star player in the days when he guarded the Wanderers' nets, made the presentation as a fellow-citizen of Morenz from Stratford. Announcement was made by Leo Dandurand that George Hainsworth, Canadian goalkeeper, was the first winner of a cup donated by the Canadian Hockey Club each year to the goaler with the best average in the National Hockey League. The trophy is dedicated to the memory of the immortal, Georges Veziua, who guarded the Canadian nets until his death. Among others who added their weight to the praise of the guest of honor were Judge Amedee Monette who presided over the banquet, Louis Letourneau, Cecil Hart, Frank Calder, Sir Henry Gray, Emile Collet, George Richer and Fred Richard. Letters expressing regret at being unable to attend were read from Hon. Athanasie David, president of Canadiens and Hon. Fernand Rinfret.

English Girl Beats U. S. Rival at Golf

NEWCASTLE, County Down, Ireland, May 18.—A stormy day of golf during which Miss Cecil Leitch, famous English champion, was struck by lightning and many players were unnerved by the electrical flashes and heavy rolling thunder, saw the first championship matches of the British ladies' open championships. The storm was particularly severe during the round between Miss Enid Wilson of Nottinghamshire, and Miss Janet Brooks, of Englewood, N. J., which Miss Wilson won by six up and four to play. The championship matches started this morning over the Seaghill court of the Royal County DDown at the foot of the Moarne Chicago, Miss Virginia Wilson of Chicago, won her way into the third round, and with two French girls, Mlle. De La Chaume, and Nanette Leblan, remains a formidable foreign challenger for the British title, which has never gone abroad. Mlle. Leblan's ability was not known, but she established the right to recognition by defeating Miss Audrey Croft, 2 and 1, then beating Mrs. A. Mellis, a strong Scottish player by the same score. Mlle. De La Chaume had a strong first round opponent in Mrs. Garon, who was runner up to Miss Leitch last year, the French girl winning 2 and 1.

All of the \$30 million gold transferred on the movement has come to the American Exchange Irving Trust Company which also handled the \$20 million of gold sent to New York by France last January. SUN SPOTS ARE CAUSE OF HEAVY RAINFALL

OTTAWA, Ont., May 18.—Unusually heavy rainfall occurring throughout many parts of the world may be due to the action of sun spots, according to Dr. Ralph E. Delury of the Dominion Observatory. Dr. Delury said today the sun spot cycle, which is completed every eleven years, is now nearing its maximum manifestation. At such times the sun gives off greater heat than at others, and more moisture is lifted into the atmosphere. At the same time violet rays emitted from the fiery orb tend to split up component atoms of the atmosphere and form nuclei for the collection of cloud particles thus producing heavier rainfall.
