In Canada as compared with over 5,000 in 1948. This increase can be attributed to the low initial cost and the fact that many of the field operations can be performed by the one-plow tractor and its equipment. Although the one-plow tractor costs approximately one-half as much as the two-plow tractor, and will normally accomplish at least half the amount of work, the new cost per drawbar horse power is usually 25 per cent greater for the one-plow tractor than for large tractors. It has been estimated that a one-plow tractor will plough an acre of land for about \$4 while a two-plow tractor will do an acre for about \$3.50. This higher cost for the one-plow tractor is partly due to the increased labour cost, since one man can do approximately half as much with a one-plow tractor as with the two-plow tractor. These costs are based on operations under average field conditions; the above figures indicate that the one-plow tractor involves less investment but does not necessarily result in a reduced cost per acre when compared with the larger tractors, says Allan Magee, Field Husbandry Division, Central Experimental Farm, Ottawa.

The complementary mounted implements available are usually well designed and cost less than similar equipment for larger tractors. Many farms are using a one-plow tractor in place of two or three horses. This size of tractor will haul most two horse equipment under normal field conditions. In addition, the tractor will supply belt power for various operations.

When operating a one-plow tractor it should not be overloaded. For example, some operators endeavor to draw a 5-foot tandem disc harrow, and greatly overload the tractor which may be designed to pull a 5-foot single disc. This results in reduced efficiency and dissatisfaction.

Whole Grain Mash Tests For Poultry

Dry mash and whole grain form the basis of standard rations for laying poultry during both summer and winter. The plan usually followed is to supply a well-balanced mash in a self-feeder and allow the birds access to this feed continuously. Too generous feeding of whole grain is commonly considered dangerous from the standpoint of causing laying stock to come overly fat and consequently increasing the death rate. Supplying approximately fifty per cent by weight of the ration in the form of dry mash, and fifty per cent by weight in the form of whole grain, has been considered good feeding practice.

A series of five feeding tests using a total of almost two thousand pullets was undertaken at the Dominion Experimental Farm, Brandon, Man., says R.M. Hooper, the superintendent, to determine the effect, if any, upon laying ability of increasing the proportion of whole grain fed in the ration. The dry mash used in the tests was made up of ground, home-grown grains together with the essential protein, mineral and vitamin supplements. The whole grain mixture was made up of wheat, oats, and barley in the proportions of two, one, one. Each of the five tests was continued for a period of eleven months. The percentages by weight of whole grain used in the tests were: 10, 20, 30, 40, and 50. With each of the rations, dry mash made up the balance.

In the first four tests, the amount of meat meal included in the mash was increased for the pens of birds fed rations that included seventy or eighty per cent of whole grain. This was done to ensure the intake of protein being approximately equal for the birds consuming the different rations. All pens received buttermilk for drink. The performance of the birds consuming different proportions of mash and whole grain in these tests, as measured by the number of eggs laid, mortality rate, pounds of feed consumed per pound of eggs laid and the effect upon body weight of the birds, showed only small differences.

In the fifth test the rations supplied were the same as those in the first four, excepting that no buttermilk was supplied and the amount of meat meal in the mash was not increased for the birds consuming the larger proportions of whole grain. In this test, the protein intake of the different groups of test birds was not equalized. The results of this test indicated a difference in mortality rate caused by the two rations, and that there was no appreciable effect upon egg production nor the other factors of economic importance in poultry keeping.

The results of this series of feeding tests indicate that rations that

Georgetown Wins Southern King's Baseball Title

The end of the rainbow was reached on Sunday by Georgetown's smart baseball team when they clinched the Southern King's baseball championship by winning smartly over Peakes by a 14-10 score before a large crowd at the local diamond. The team is slated to go into Provincial intermediate class "B" playdowns in the near future but the winning of the Physical Fitness trophy was their main goal. The game was raggedly by the locals which netted them four runs, was an indication of being able to put on the pressure when it counted. Each team used two pitchers, the locals relieving Dickie with MacLean and the losers replacing their starting pitcher MacAulay with Smith. Sparking the Georgetown team in the field and at bat was Jim MacConnell, who although he has spent little action this season was a tower of strength to his team.

Farm Help When Harvest Comes

An interesting article in the July Labour Gazette sketches the background of the movement of seasonal agricultural workers in Canada. As early as 1896, the railways were sponsoring the movement of grain harvesters from eastern Canada to the Prairie Provinces, and at about the same workers from Quebec to Maine and Vermont drifting to sugar workers to the United States began, and has continued, with little formal direction, but the western harvest movement was fully organized from its inception. Transient and immigration help proved adequate for a few years; then outside help in large numbers during harvesting operations became a necessity. Two general policies have been followed: the period from 1896 to 1919, including the special wartime measures; and the governmental policy, which started in 1920 and has continued with few changes down to the present. Since 1942 movements of seasonal farm workers have been organized through the National Employment Service and provincial Departments Dominion-Provincial Farm Labour Committees in each province.

That these organized movements

\*ANNIVERSARY AT STURGEON—A very "warm" welcome was accorded the Rev. W. E. Dudley, D.D., and the large congregation attending the sixty-sixth anniversary of the present Sturgeon United Church. The church was filled in the afternoon and in the evening, listened through the open windows as a prelude. The building was at a premium. The messages of the preacher were listened to with evident appreciation. His intriguing texts were: "And David longed, and said Oh that one would give me water to drink of the well of Bethlehem, which is by the gate," and "That those things which are not shaken may remain." The present and the future are to be linked together, but are not to be so linked to it that progress is impossible. God and beauty and truth abide and we are to use it that our hearts do not depart. Beautiful flowers adorned the church and the music was of a high order.

Mr. and Mrs. Waldron Stewart and Mrs. Edley McKay of Norboro spent Sunday at St. Peter's with Mr. McKay's sister, Mrs. Edward and Mr. Edward Quigley.

Mr. and Mrs. Mabon Bynon, Summerside, and Mrs. John Walker and daughter Mrs. Kennington, were weekend visitors at St. Peter's, the guests of their cousins, Albert and Eddie Quigley.

Bay Fortune Notes

The Messrs. Hazel and Shirley Jenkins of Dundas, were visitors to Fortune this week, being the guests of Mr. and Mrs. Charles Mills.

A large gathering attended the "Ray Little Cowboy Show," held in Fortune Bridge Hall on Tuesday evening August 30th, sponsored by the Fortune Bridge Women's Institute.

The sympathy of the surrounding communities goes out to Mr. and Mrs. Raymond MacDonald, of eastern Canada to the Prairie Provinces, and at about the same workers from Quebec to Maine and Vermont drifting to sugar workers to the United States began, and has continued, with little formal direction, but the western harvest movement was fully organized from its inception. Transient and immigration help proved adequate for a few years; then outside help in large numbers during harvesting operations became a necessity. Two general policies have been followed: the period from 1896 to 1919, including the special wartime measures; and the governmental policy, which started in 1920 and has continued with few changes down to the present. Since 1942 movements of seasonal farm workers have been organized through the National Employment Service and provincial Departments Dominion-Provincial Farm Labour Committees in each province.

Mr. and Mrs. R.J. McKenzie, Souris, were visitors to Fortune and Harve Bay on Sunday.

Messrs. Sterling Burke and son Roger, George Wood, William McKinnon, and Mrs. Howard Wood were visitors to Charlottetown this week-end.

Mr. Ed. Townsend and Mr. William Acorn, Souris, were visitors to Fortune during the week.

Miss Jean Bevan, Charlottetown, is enjoying a pleasant visit with her grandmother, Mrs. Jack McKie.

Mr. and Mrs. Aubrey Aitken, have as their guests, Mrs. Aitken, provided an important addition to local farm labour requirements is seen from the record for the 1948 harvest. Fifteen individual movements took place, involving approximately 16,000 persons, and eight of these covering 9,000 workers were international in scope, involving movements to, or from, the United States.

In the international field, Canada supplied the United States with potato pickers, maple sugar workers, sugar beet harvesters, apple pickers and combine harvesters. In return the United States helped out with tobacco harvesters in Ontario and Quebec. In Canada, workers were moved to help on the Prairies, with haying in Ontario and Prince Edward Island, picking apples and fruit in Nova Scotia and British Columbia, and to help out the potato harvest in Prince Edward Island.

The movement of seasonal farm workers will continue this year.
