

The Least Excitement Made Her Heart Palpitate and Flutter

Mrs. Ambrose Orser, Elginburg, Ont., writes: "I suffered for some time with a bad heart which seemed to be controlled by my nerves. The least excitement would cause it to flutter and palpitate, and at times I would have real bad spells. I suffered in this way for some time when, one day, I saw

advised, so I decided to try them. I had only taken a few boxes when I felt better, so I continued taking them and in a short time my heart felt entirely different.

Horticultural Notes

It would seem that very often the great deterrent in planting an apple orchard or even only a few trees is the cost of the young trees. This item with its attendant care, acre or more, especially if plums and pears and cherries too, are considered, is considerable at nurserymen's first prices, amounting in the latter case to upwards of one hundred dollars per acre. This difficulty can very easily be overcome by growing one's own nursery stock, but it takes two years to get young trees ready for planting out. There is nothing mysterious nor difficult about this work and it can be done quite easily by anyone who will follow instructions and will plan their work in fruit growing a few years in advance.

At this time we will outline this work as it may be taken up now and leave the other details for a future time when the young stock shall be ready for the work upon them.

To propagate young apple trees it is necessary to get what is called the stock or roots upon which the desired variety can be worked. This stock is young apple trees grown from seed and the very best seed for this purpose is the seed of our crab apples. For this work crab apples should be gathered at this season the same as any other apples and stored in a place where they will keep reasonably well. Then at any time during the winter the seeds can be taken from the
