A DOMINION CONFERENCE OF FRUIT GROWERS.

According to statistics gleaned from the 1911 Census of Canada, the total capital value of the fruit growing industry in British Columbia, Ontario, Quebec and the Maritime Provinces is in round numbers \$12,000,000. This is the estimate worked out by the Chief of the Markets Division of the Dairy & Cold Storage Branch of the Department of Agriculture, and published in the printed report of the proceedings of the third conference of fruit growers of Canada, held in Ottawa last February. This conference, which lasted three days, was a very important one from many standpoints as it was busily engaged during its six sessions with matters of greatest moment to the great and growing industry represented. Among the subjects dealt with were, co-operation, new fruits, refrigeration, fruit packages, amendments to the Inspection Sale Act, transportation, crou and market reports, etc. In addition a number of addresses were delivered by such notable men as the Prime Minister, the Hon. Martin Burrell, Minister of Agriculture, himself a large fruit grower and Dr. James W. Robertson. In order to give the fruit growers and others interested in the industry in all parts of Canada the benefit of this conference, the Hon. Mr. Burrell, Minister of Agriculture, has authorized the printing of several thousand copies of the report which will be sent free while the supply lasts to those who apply for it to the Publications Branch, Department of Agriculture, Ottawa.

FIGHTING LOCUST PLAGUE.

PARIS, July 13.—Dr. Felix D. Herelle of the Pasteur Institute, has just returned from Argentina, where he has been experimenting with bacillus for the extermination of locusts. Argentina has been overrun with locusts, which threatened to destroy the crops and cause the loss of millions of dollars. Hearing of Herelle's investigation and his discovery, which had never been practically tested, the Argentine Government invited the French savant to cross the ocean and continue his experiments in fighting the plague among the locusts themselves. Herelle's work has proved entirely successful. The locusts were infected with his bacilli and quickly spread the disease over a great space. The insects die six days after inoculation. It was found that in forty days the locusts had spread the disease over 250 miles and after three weeks only one column of locusts was left alive in the Province of Rioja. When Dr. Herelle left Argentina there were already dying by the new method of destruction. The extinction is said to be sure and swift. Moreover, the bacilli are harmless to men and cattle.

GOVERNMENT AT WORK TO SETTLE STRIKES

LONDON, July 17.—The government is making another strong effort to get the London dock strike settled. The chief liberal whip, the master of Elibank, called a conference which met at midnight at Premier Asquith's offices. The premier and Lord Devonport, representing the port authorities and the representatives of the men, who took part. The conference was adjourned on this count held today.
