*SHOP from Holman's Catalog... MILK FOR SALE—8c quart... TAKE CARE OF YOUR SEED CORN.

With the advent of the cold frosty days of November and December begins the danger period as far as climate is concerned for stored corn that is to be used for seed purposes.

In the areas that we consider the seed corn growing section of the country there is less danger of damp or insufficiently ripened corn being stored. Even in these more favored areas, however, damp fall weather or improper methods of storing frequently means poor vitality in the seed corn thus handled.

This low vitality of seed corn offered for sale each spring is reflected in decreased yields because of poor stands of corn. Each year good seed corn is scarce. The truth of this statement is not commonly appreciated.

Before the real severe winter weather arrives it would be worth while to examine your seed corn supply to see if it is perfectly dry. If it is not it will pay well to remove at least enough to a heated room to supply the grower's own needs.

Corn intended for seed purpose should not go into the winter with more than 10 to 12% of moisture unless it is kept in a heated room during the season of severe frost.

Careful, thorough drying immediately after harvest time to a moisture content of 19 to 22% and the use of a storage method that keeps the individual ears in a well ventilated and dry condition is the secret of producing seed corn that will give satisfaction as far as vitality is concerned.

A great deal of the very best seed corn is available at ripening time. The problem is then to keep the corn from harvesting time until planting time the following spring in such a manner that it will retain its full productivity.

Each year good seed corn is scarce. The truth of this statement is not commonly appreciated. Before the real severe winter weather arrives it would be worth while to examine your seed corn supply to see if it is perfectly dry.

According to the 1910 census the value of forest products produced on the farms of the United States East of the Great Plains was close to \$200,000,000. In 1918 over 100,000,000 cords of wood were burned on American farms or sold off the farms to town and

Why It Is a Good Family Medicine

From its splendid formula, its superb blood purifying qualities, its prompt tonic effects, and above all its unequalled record in practical use by three generations, Hood's Sarsaparilla is the favorite medicine in many homes.

Each year good seed corn is scarce. The truth of this statement is not commonly appreciated. Before the real severe winter weather arrives it would be worth while to examine your seed corn supply to see if it is perfectly dry.

According to the 1910 census the value of forest products produced on the farms of the United States East of the Great Plains was close to \$200,000,000. In 1918 over 100,000,000 cords of wood were burned on American farms or sold off the farms to town and

city dwellers. Throughout Eastern Canada the value of forest products sold on the average farm is probably greater than in the United States.

Except in the more thickly settled sections of the country, lucrative employment is found for labor and teams during the winter months cutting and hauling logs, ties, pulpwood, pit timber and cordwood.

Even in the thickly populated portions of the East the farms have been cultivated for well over one hundred years, it is a well common for farmers to haul from 100 to 200 cords of firewood in a season.

This year stove wood is selling for from \$10 to \$14.50 per cord. This will give an idea of the importance of the farm wood lot.

It is bad practice to allow sheep or cattle to pasture in the woodlot, because they destroy the young growth which should come as soon as the heavier timber is removed.

Of the hardwood trees the hard maple is the most valuable for sugar making, the wood is valuable for fuel, the manufacture of agricultural implements, furniture and distilled oil from any drug store, and in a word, other valuable hard-wood materials are, birch, beech, brown ash and elm, Basswood and

Rubber Windows

After four years of experiment and the expenditure of much money, two British chemists have succeeded in producing a variety of rubber which is as stout and elastic as the ordinary rubber and as transparent as glass.

Such a material, it is believed, will be invaluable for windows. Tests show that it is impossible to break such rubber windows in the ordinary way.

A ball bouncing against it only causes it to bend slightly and at once spring back to place again. A heavy missile striking against the pane will tear or cut it, but with no resulting danger from splinters.

Among the various uses to which the new stuff may be put, one of the nearest is the hatching cap, which will give the effect of an invisible covering showing the hair, yet keeping it dry.

SIX FLAGS OF TEXAS. Over the state of Texas, six flags have flown; first that of France, borne by the explorer La Salle, who he sailed down the Mississippi to the Gulf of Mexico, and on New Year's Day 1685, established his short-lived colony on Matagorda Bay.

A quarter of a century later came the Spaniards to plant a mission at San Antonio. In all twenty-five presidios or forts with their accompanying missions were founded on Texan soil during the hundred years of Spanish occupation, but they did not thrive.

Next Mexican rule was substituted but with little better success. After fifteen years under Mexico the Texans revolted and set up their own republic with the lone star flag for their emblem (hence Texas' popular name of the "Lone Star State.")

The Texas republic held out for nearly ten years, but in 1845 it became one of the United States. Texas suffered another change of flags when at the time of the Civil War, she threw in her lot with the southern Confederacy.

Two Irishmen were indulging in a quiet game of cards when it came to Jack's turn to deal. During the deal, Pat remarked: "Molke plwat was the last card I gave ye?"

"A spade," replied Mike. "I thought it was" replied Pat, "the way ye spit on your hands before ye picked it up."

Why are birds melancholy in the morning? Because their "bills" are all over due.
