

The Prime Minister at Summerside Thursday

Quick! Ends pain at once! CORNS

In one minute your misery from corns is ended. That's how quick Dr. Scholl's Zino-pads give relief. They stop the "burning" - pressing or rubbing of shoes. Once the corn is removed, it can't come back - because Zino-pads stop it before it has time to start.

Dr. Scholl's Zino-pads are thin, medicated, antiseptic, protective, healing. No liquids, no taping, no risk, no bother. Safe, sure, quick results guaranteed. Get a box today at your druggist's or shoe dealer's - 35c.

For free sample, write The Scholl Mfg. Co., 112 Adelaide St., E. Toronto, Ont.

INSIDIOUS EYE STRAIN

We use this adjective advisedly.

Sufferers from Eyestrain may have perfect vision and therefore do not suspect the presence of any eye defect.

The motive power of the entire human organism is Nerve Energy.

Normal eyes, it is computed utilize about 20% of this Nerve Energy, but when Eyestrain is present, a much larger proportion is required. Hence defective eyes, through their consumption of an excessive amount of Nerve Energy, may seriously affect the functioning of other organs of the body, and produce ill health.

HAVE YOUR EYES EXAMINED

G. F. Hatcheson
Optometrist

DEFECTIVE EYESIGHT

does not mean disease of the eyes. Healthy eyes often give trouble in reading or other uses.

We are specialists in correcting defective sight with proper glasses. We are equipped with the latest and most scientific instruments used for eyesight testing.

Long experience and a sound business reputation is your guarantee of good service.

—DANCE AND ICE CREAM Strand Theatre, Kensington Tuesday night. Good time guaranteed. 924-7-26-21.

—OFFICE CLOSING FOR ONE week from Monday July twenty sixth until Saturday July thirty first, H. T. Colvin, optometrist, Summerside. 923-726-11

—ICE CREAM Wednesday evening July 28th, on The Maids of Honour or C. G. I. T. Lawn, Bequee. 929-7-26-11

—WELLINGTON HOTEL will be offered by Public Auction on Tuesday, August 10th. Hotel has modern conveniences. Good centre for travellers and tourists. 885-7-5-Ms10.

—CAUSE FOR COMPLAINT.—On Tuesday, the gas car without a trailer arrived at O'Leary filled to capacity. Passengers continued to crowd on as far as Richmond.

Then the run was made to Summerside without any more allowed on. This car, built to accommodate about 75 on its arrival detained over 130. A return run was made to Wellington to accommodate those who were left. Railway men who know say that the trailer could easily be taken to Port Hill where it can be run on the switch and on the following morning the car would only have to back in, connect with the train and pulled out thereby losing only a few minutes.—Summerside Pioneer.

—HIT BY FREIGHT CAR.—On Thursday morning while Mr. Wedlock of Hunter River, was driving down to Holman's Wharf a freight car struck his auto as it was crossing the track. Mr. Wedlock's car was carried several feet until it was pinned against a switch and was badly damaged. The side of the car was badly crushed, the top in ruins and one wheel broken. Fortunately no one was seriously hurt. Neither Mr. Wedlock nor Mr. Curran, who was also in the car, heard or saw the freight car as it was being shunted backward.

Minard's Liniment for Burns.

PERSONALS

—Mrs. (Dr.) J. A. Johnston returned to her home in Tignish after a pleasant visit with her sister Mrs. Brown, Bayside.

—Miss Mae Brennan, one of our Island's successful teachers in the Canadian West is spending the summer with her parents, Mr. and Mrs. J. Albert Brennan, Tignish.

—Miss Lillian Steeves, Tignish, is spending the summer in Boston.

—Miss Ruth McInnis, arrived from Boston last week to spend the summer at her home in Tignish.

Hard Or Soft Corns Quickly Drop Off

This marvelous corn solvent affords immediate escape from foot agony, and by the agency of a hot foot bath, corns or callouses drop off and leave the foot as smooth as a baby's. Do it now, and in this way: Spread a few drops of Putnam's Painless Corn Extractor over the corn or callous. The pain stops at once. Another application or two of Putnam's, followed by a hot foot bath, and the corn drops off. To get rid of your corns, you must get Putnam's Painless Corn Extractor and follow the treatment. Costs little; at druggists everywhere.

IN MEMORIAM

MRS MARY MACSWAIN

At Pleasant Valley on the evening of Thursday, July 8th, 1926, there passed from this world the spirit of one who will indeed be long remembered, Mrs. Mary MacSwain, widow of the late Donald MacSwain who predeceased her twenty eight years ago, came from Scotland with her parents who made their home at Hartsville. When she married to the late Donald MacSwain the newly wed couple made their home at Pleasant Valley where they lived until death called them by turn to their eternal home. Being good Scotch Presbyterians the family continued to make Hartsville Presbyterian Church their church home until recent years when Union ceased denominational distinctions and they associated themselves with the United Church at Pleasant Valley. Mrs. MacSwain was the last of a family of nine brothers and sisters of whom she was the youngest. She was four years, she herself being in her eight-ninth year. She is survived by one son James with whom she made her home and two daughters, Mrs. Rod. MacLeod of Hartsville and Mary of Providence R. I.

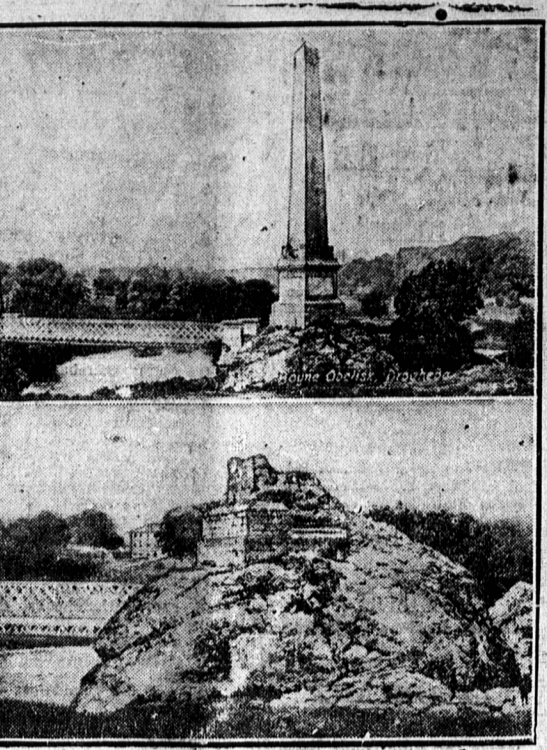

The funeral was conducted from her late home to Hartsville Cemetery on Saturday, July 10th by Rev. David Coburn of Bradabano and Mr. R. H. Baxter of Pleasant Valley.

The very large number of friends who gathered to pay their last tribute and accompany the remains to its last resting place bore testimony to the affection and esteem in which Mrs. MacSwain was held by a large community. The influence of her life and the memory of her patient, sympathetic and kindly manner cannot fail to live long in the hearts of those who survive.

MR. FABIAN A. HOWLETT.

Funeral services for Fabian A. Howlett, 25-year-old baritone singer, whose voice was familiar to thousands of New England radio listeners, will be held this morning at 9 o'clock, when a high mass of requiem will be celebrated at St. Leo's Church, Dorchester. Mr. Howlett was the son of Mr. and Mrs. James A. Howlett of 14 Atholwood St., Dorchester. He had frequently sung from Station WEEI during concert programs and had appeared at concerts in Dorchester and along the South Shore, where he was very popular. He was preparing for his debut on the concert stage when he died suddenly after four days illness at the Summer home of his parents at Houghs Neck. He had recently undergone an operation. His father is building inspector for the city of Boston. The young man was born in Souris, P. E. I., but came to Boston as a youngster. He was graduated from the William E. Russell School and later attended Boston College High School. He is survived by his parents, two sisters, Rita and Gertrude, and two brothers, Harold and Robert.

BRINGING UP FATHER—

Upper picture shows the obelisk King James' army entrenched near Drogheda, Ireland, erected in hind the Boyne and where his famous 1690, to commemorate the victory of the Duke of Schomberg over King William III. in the Battle of the Boyne in 1690. It was at this spot that King William and his troops the Sinn Feiners blew it to pieces by land mines in 1923.

Seventeen members of the Browning Granddads' Club from Walworth, England, spent their holiday by the sea at Littlehampton, where they thoroughly enjoyed themselves. They ranged in age from sixty to eighty-five. This little group was photographed on the beach.

BLACK KNOT OF PLUMS AND CHERRIES

(Experimental Farms Note)

This prominent disease of plums and cherries is exceedingly destructive in sections of Quebec and the Maritime provinces, as there has been little concerted effort to eradicate the disease except in a few commercial orchards. Black knot is found on wild cherry and plum trees as well as on cultivated varieties of plums and sour cherries. Sweet cherries are seldom affected by the disease. On account of the prevalence of black knot on wild species and the resulting infections these cause, it is difficult to bring this pest under control.

The least amount of injury may be expected where cultivated trees are distant half a mile or so from infected wild plums or cherries. In such cases the thorough pruning and cutting out of all knots will below the diseased areas and a subsequent burning of this material should be practised. This pruning is best done in late autumn, after the leaves are off or in the early spring before the buds swell, after the leaves are off or in early spring before the buds swell. Thorough applications of lime-sulphur 1.008 sp.gr. strength or Bordeaux mixture 4-8-40 sp. gr. strength when the buds are dormant, is of considerable value in controlling black knot and also plum pockets.

In sections of these provinces where an effort is being made to cultivate sweet and sour cherries on a commercial scale, it is recommended that the growers in the community cooperate to eradicate all wild species in the vicinity of their orchards and stage a vigorous campaign for control of the disease. Assistance in such efforts may be obtained by writing to: The Dominion Botanist, Central Experimental Farm, Ottawa, or to the nearest Laboratory of Plant Pathology at—St. Anne de la Pointe, P. Q., Charlottetown, P. E. I., Fredericton, N. B. or Kentville, N. S. J. F. Hickey, Dominion Experimental Station, Kentville, N. S.

CURLING HAY.

(Experimental Farms Note)

Hay, to be of the best quality, must be cut when the crop is at the right stage of maturity, and must then be cured in the large percentage of leaf, and is of inferior feed value.

In general the principles of hay making are the same for all hay crops. The crop must be cut at a stage of maturity that will give the highest yield of palatable hay. Above all, the crop must not be permitted to ripen too far or the resulting feed will be woody, with a high percentage of wastage when fed.

In the making of clover hay the best quality is obtained when the crop is cut when in full bloom, or when heads are just beginning to turn brown. It should be cut in the morning as soon as free from dew. If may be tedded or turned by hand, and then rolled in rather small but carefully made rolls, or cocks, in the evening. Hay of this type cures best under conditions which prevent very rapid drying of the leaves. If favorable weather obtains the hay may be taken up after several days, directly from the roll, although if help is available very fine hay results if the rolls are shaken out several hours previous to hauling.

When a heavy rain has fallen on

clover after it has been cut, the operation of curing becomes difficult. If very wet, and left in large coils, it will mildew; if spread out in the hot sun, the leaves blacken and break off readily, leaving a stony hay. If the weather is fine following the rain, a fairly satisfactory method is to leave the coils undisturbed during the day. In the evening, if the weather appears settled spread the coils springily and leave open all night. The hay may then be fit for drawing in the following day, or it may be necessary to coil for further curing.

Hay and store when the hay rustles nicely. The addition of one or two pounds of common salt per ton of hay as it is being stored usually adds to the keeping quality and palatability. Timothy hays and mixed hays should be cut when the seed is forming, or as most farmers say: "just after the second blossom falls". Cut in the morning after the dew is off, tedded or turned in the afternoon, and raked and rolled in large well made coils in the evening. It is frequently possible to take up hay of this type on the following day. Under favorable conditions one may dispense with the coiling, hauling directly from the windrow; when this method is feasible considerable labour is saved.

Under very favorable weather conditions, timothy and mixed hays are sometimes cut in the morning and stored away in the afternoon. There are arguments for and against such a practice. With hay cut at the proper state of maturity to ensure the greatest palatability, it is doubtful if it would keep properly in storage under such treatment. At a later stage, however, or with hay somewhat over-ripe, it is quite possible to follow such a practice successfully.

R. F. Tinney, Dominion Experimental Station, Charlottetown P. E. I.

East Bideford.—The regular monthly meeting was held at the schoolhouse. Nine members and one visitor were present. Minutes were read and adopted. A report of the Convention was given by the delegates. Next meeting to be at the home of Mrs. Gus McKinnon.

Peter's Road.—The monthly meeting of this Institute was held at the home of Mrs. Fred W. Johnson. Eight members were present. A report of the Convention was read by the delegates. It was decided to serve ice-cream to the school children on the day school closed. Mrs. Garfield Johnson gave a splendid reading: "Our Club." Next meeting at the home of Mrs. A. M. Johnson.

INSTITUTE SENDS APPRECIATION

To Miss Mary Ellen Gallant, Stanley Bridge, P. E. I.
Dear Friend:

You have been a consistent member of the Stirling Women's Institute since its beginning and have always taken a keen interest in everything that pertained to its being the recipients of your favors in the Culinary Department, particularly when ever and where ever you were asked to assist.

You had the misfortune to lose most of your earthly possessions, clothes, money, keepsakes, etc., a few months ago in the fire which destroyed your home. We offer you our sincere sympathy but we feel that sympathy is very little to offer and we would be very recreant in our duty toward a fellow member if we did not offer you something more tangible, so we ask you to accept this token of our esteem.

Signed by the members of Stirling Institute.

Mrs. J. R. Stewart, President.
Mrs. E. O. Simpson, Secretary
June 17, 1926.

COMPARATIVE VALUE OF LIQUID AND DUST BORDEAUX FOR THE CONTROL OF THE POTATO BLIGHT.

(Experimental Farms Note)

The introduction of Bordeaux dust as a possible substitute for liquid Bordeaux to control late blight and related diseases of potatoes occasions considerable demand on the part of growers for information concerning the respective merits of spray and dust applications. To afford information concerning the respective merits of spray and dust applications, the Botanical Division of the Experimental Farms System at certain of its field laboratories, the results of which indicate that the general effectiveness of dusting in controlling disease and resulting crop returns was equal, but not superior to that of liquid Bordeaux. The cost of the respective operations, taking into consideration the material required and labour necessary for its application, was found slightly in favor of spraying. The following suggestions may assist the grower in determining which method will most largely suit his individual requirements. As the time during which certain diseases, such as late blight, may be effectively controlled is very brief, (sometimes only two or three days) and whereas during these critical periods the spraying problem is one of having a sufficient number of outfits and reliable men to accomplish the work, whereas dusting affords the largest measure of protection. This particularly would apply when the acreage is large (25 acres or more) and the water supply not convenient to the potato field. In the case of small acreages, however, dusting should not supplant spraying, but if deemed expedient, supplement it. Of the several requirements for successful disease control by spraying or dusting, the most important are early application, correct solutions or dust mixtures and consistent and thorough applications at seven or ten day intervals during the growing season.

D. J. MacLeod, Dominion Experimental Station, Fredericton, N. B.
