The Eastern Trust Company Reports Satisfactory Year

At the Annual Meeting of the Eastern Trust Company which took place in Halifax yesterday the forty-fifth annual statement presented by the Directors evidenced another year of satisfactory progress and steady growth of this

Mr. C. H. B. LONGWORTH Provincial Chairman of Directors

Maritime institution which is Canada's second oldest Trust Company. Net earnings for the year were sufficient to allow for the transfer of an additional \$25,000.00 to the Reserve Fund which now stands at \$325,000.00. In addition to this transfer to reserve \$27,000.00 has been laid aside against possible tax levies, \$16,275.91 written off assets, and a profit and loss balance of \$25,144.12 carried forward after payment of the regular dividend and provision made for all known losses during the year.

Mr. C. N. BISSETT Provincial Manager

The value of the Assets in all sections of the Balance Sheet, conservatively fixed at less than fair market value, show a satisfactory increase for the period, having been increased to \$60,878,543.91, being the highest point in the Company's history.

In his address to the Shareholders the President reviewed the financial statement and record of the Company pointing out that all operations were subjected to the usual thorough examination by the inspecting officials of the Dominion Government and other Jurisdictions and under the direction of the Inspection Committee of the Board. All items of the Company's internal condition to a point where it presented probably the soundest statement of any Canadian trust company, it can be handled.

Grain

WINNIPEG, Feb. 8 (CP)—A stronger trend at Chicago and moderate commission house buying gave Winnipeg wheat futures prices a steadier tone today. Quotations held fractional early gains and closed 1-8-3-8 cent higher, with May at 82 3-8, July 63 1-8 and Oct. 63 5-8 cents. Liverpool closed 1-8d lower to 1-8d higher. Pit-trade in coarse grains brought out a few minor purchases of barley and a little domestic interest in oats. Cash wheat transactions were negligible.

Currencies

MONTREAL, Feb. 8 (CP)—United States dollar remained unchanged at 17-32 premium on Montreal foreign exchanges today while Pound Sterling gave up 1-16 to 71 3-8. French francs backedtracked narrowly to 2.66 5-32.

Seed Box in the Window Gets the Jump on Spring

Thousands of seedling vegetable and flower plants are grown successfully each spring in small boxes of soil placed in south or east windows. They are a reliable aid to good gardening if properly handled. The preparation of the seed box is a simple task but one that needs care to be reasonably certain of bringing the seedlings to planting size. In a tightly built box it is advisable to bore holes in the bottom to assist quick drainage. By covering the holes with pieces of broken pottery, the soil is prevented from leaking through. If a drainage hole is placed together with cracks between its boards, the drainage holes may be omitted. For the finer seeds it is an excellent plan to cut burlap to fit cell plan and lay it over the coarse drainage and then place the soil upon it so that the box may be watered by setting it in a pan of water and there will be no danger of washing the tiny seeds or seedlings. Firm the soil and sow the seed thinly in rows. This is better than sowing broadcast as it will be appreciated when it comes to transplanting. Thin sowing is economy. Quantities of seed are wasted by too thick planting. The tiny plants crowd each other and none of them has a fair chance when they come up thick as fur. This necessitates early transplanting before the seedlings are strong enough to be handled. Cover the seed boxes with a damp cloth or piece of paper until germination starts, then place a pane of glass over the top. Remove the paper or cloth as soon as the first tiny sprouts break the soil. Wipe off the covering glass when water collects on it from evaporation. This will prevent moisture from dripping. During the day prop up one edge of the covering glass for ventilation. Keep seed box soil moist but not wet or water-logged. Good drainage will take care of this, provided water enough to soak the soil is applied when needed, which is likely to be once a day. Give the seed box all the sunlight possible. If the seedlings do not have sufficient light they will reach for it, growing tall, spindly and weak. Humid air is also desirable for them; a kitchen window facing south is a good place for the seed box since the kitchen air usually has the most moisture. When the seedling plants have formed their second pair of leaves they may be transplanted to another box where they will have more room.

"PAYING" GRAIN YIELDS start with CERESAN

WAKE UP to what you're losing if you don't treat seed with CERESAN—high mercury phosphate. Reduces striking most of wheat's muscle of oats; covered and black legs smuts and stripe of barley. Recommended in Bulletin 92, University of Saskatchewan, for better control of seed-borne root rot. Generally increases yields—in tests, an actual average of 8% on wheat and barley and 18% on oats. Quite as little as 30 per bushel of seed. Treat now—be ready to plant. Write for grain pamphlet and circular describing automatic treader. CANADIAN INDUSTRIES LIMITED, Halifax, N.S.
