NEW SPIRAL BEVEL GEAR 3/4 FLOATING REAR AXLE Strength, reliability and long life

New features of the FORD TRUCK

THE Ford 1 1/2-ton truck is a haulage unit carefully designed to provide unusual performance under a wide variety of conditions, and long, reliable service at minimum cost.

Rugged strength is a feature of the Ford truck. An important example is the new three-quarter floating rear axle. It is of improved construction and has a spiral bevel gear of special Ford truck design, with straddle-mounted pinion.

The new front axle and spring are heavier and stronger, as are front radius-rod, king-pins, wheel bearings and thrust bearings. Brakes on the front wheels have been enlarged to the same size as those on the rear wheels, providing increased braking area and a high degree of safety.

Dual rear wheels are available at small additional cost. Balloon tires of one size are used throughout, with the dual equipment, so that all six steel disc wheels and tires are interchangeable all around.

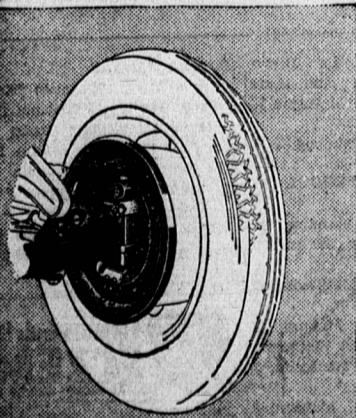

A new feature is the torque-tube drive, which relieves rear springs of all but their normal function of absorbing shocks.

Go to your Ford dealer, today, and see this truck. It is available in three distinct types—a speedy, attractive light delivery, a standard truck for general haulage, and a heavy-duty model.

LARGER BRAKES Providing a greater degree of safety
