KINAROS

(38086)

By Kamares, 2.10 3-4—Dam, Russula, dam of five including Bergen, 2.06 3-4.

The breeders of King's County again have the opportunity of breeding to this great Standard Bred stock horse.

His colts are all large stylish drivers, and are bringing big prices on the markets today.

Why breed to untried horses, when you can secure the services of a horse with a good stock reputation?

KINAROS, will make the season of 1915, at the Montague Livery Stables. All mares at owner's risk.

Further particulars on application.

THE FARM

(Continued from page nine)

case, and many others who may know of losses entailed by it.

In response to many requests for information as to the prevention and treatment of contagious abortion of cattle, the department's specialists in animal diseases have recommended the following method of combating the infection:

The disease is caused by a specific infection agent, the Bacillus abortus, infrequently from other causes. Many persons have thought that abortion was due to injury, such as blows, horn thrusts, falls, or to the eating of spoiled feed or certain herbs, but careful investigation have proved these views to be largely unfounded. Contagious abortion is a very insidious disease, and as it does not markedly affect the health of the individual cow its presence may not be recognized until the infection has extended throughout the herd. In economic importance it ranks second only to tuberculosis.

Efforts have been made to discover some medicinal agent which would cure the disease, and attempts have also been made to produce a serum, but this work is still in the experimental stage and no reliable curative agent has yet been discovered. placed upon the careful and repeated disinfection of premises and of animals, together with the separation of healthy from diseased animals.

Disinfection of Premises

The thorough disinfection of premises is essential. This may be satisfactorily accomplished by carrying out the following directions:

1. Sweep ceilings, side walls, stalls partitions, floors, and other surfaces until free from cobwebs and dust.
2. Remove all accumulations of filth by scraping, and if woodwork has become decayed, porous, or absorbent, it should be removed, burned, and replaced with new material.
3. If floor is of earth, remove 4 inches from the surface, and in places where it shows staining with urine a sufficient depth should be replaced to expose fresh earth. All earth removed should be replaced with earth from an uncontaminated source, or a new floor of concrete may be laid, which is very durable and easily cleaned.
4. All refuse and material from stable and barnyard should be removed to a place not accessible to cattle or hogs. The manure should be spread on fields and turned under while the wood should be burned.

WHOLE FAMILY USES THEM

"Fruit-a-tives" Keeps Young And Old In Splendid Health.

J. W. HAMMOND Esq.

SCOTLAND, ONT., Aug. 25th. 1913

"Fruit-a-tives" are the only pills manufactured, to my way of thinking. They work completely, no griping whatever, and one is plenty for any ordinary person at a dose. My wife was a martyr to Constipation. We tried everything on the calendar without satisfaction, and spent large sums of money until we happened on "Fruit-a-tives". I cannot say too much in their favor.

We have used them in the family for about two years and we would not use anything else as long as we can get "Fruit-a-tives".

Their action is mild, and no distress at all. I have recommended them to many other people, and our whole family uses them.

J. W. HAMMOND.

Those who have been cured by "Fruit-a-tives" are proud and happy to tell a sick or ailing friend about these wonderful tablets made from fruit juices.

50c. a box, 6 for \$2.50, trial size 25c. At all dealers or on receipt of price by Fruit-a-tives Limited, Ottawa.

5. The entire interior of the stable, especially the feeding troughs and drains, should be saturated with a disinfectant, as liquor cresolis composing (U. S. P.), or carbolic acid, 6 ounces to every gallon water in each case. After this has dried, the stalls, walls, and ceilings may be covered with whitewash (lime wash), to each gallon of which should be added 4 ounces of chlorid of lime.

The best method of applying this disinfectant, and the lime wash is by means of a strong spray pump, such as those used by orchardists.

This method is efficient in disinfecting diseases of animals, and should be applied immediately following any outbreak, and, as a matter of precaution, it may be used once or twice yearly.

6. It is important that arrangements be made to admit a plentiful supply of sunlight and fresh air by providing an ample number of windows, thereby eliminating dampness, stuffiness, bad odor, and other insanitary conditions. Good drainage is also very necessary.

If the use of liquor cresolis, compositus, carbolic acid, or other caustic products is inadmissible because of the readiness with which their odor is imparted to milk and other dairy products, bichlorid of mercury may be used in proportion of 1 to 800, or 1 pound of bichlorid to 100 gallons of water. However, all portions of the stable soiled with manure should first be thoroughly scraped and cleaned, as the albumin contained in manure would otherwise greatly diminish the disinfecting power of the bichlorid. Disinfection with this material should be supervised by a veterinarian or other person trained in the handling of poisonous drugs and chemicals, as the bichlorid of mercury is a powerful corrosive poison. The mangers and feed boxes, after drying following spraying with this material, should be washed out with hot water, as cattle are especially susceptible to mercurial poisoning. The bichlorid solution should be applied by means of a spray-pump, as recommended for the liquor cresolis compositus.

In addition, the yards should be cleaned by removing all litter and manure and disinfected by sprinkling liberally with a solution of copper sulphate, 5 oz. to a gallon of water. Milking stools and all other implements should also be thoroughly disinfected.

Disinfection and Treatment of Animals

To prevent the bull from carrying

SIRE

CROWN RIGHTS 10182, Imp. CANADIAN HORSE SOCIETY 2862. DAM

ROSA CONNAUGHT 21036, Imp.

Brown face and legs white. Foaled 1906.

Bred by McIntyre Bros., Park View, Griffen by Belth.

Sire Cataclysm 11649, by Hiawatha 10067, Prince Robert, by Prince of Wales.

2nd Dam Maid of Griffen 21035, by Pride of Blacon 10837, by Baron's Pride 9122.

3rd Dam Rosenthal 13523, by Prince of Albion 6178.

4th Dam Rose Lawrence 13522, by Prince Lawrence.

5th Dam Bute Rose 9949, by Springhill Darnley 2426.

In this stallion is found as good a blending of the Clydesdale champions of Great Britain as in any draft horse in Canada, and that he will prove a great sire I feel confident. He is five years old, brown with white trimmings—face and legs.

Will make a season in the stud at S. Rustico.

Albert Craswell, manager in charge. Service fee \$10. Mare at owner's risk.

A. A. LECKIE, Veterinary Surgeon, Owner.

9483-4-10Mtut8wpd

the infection from a diseased cow to a healthy one, first clip the tuft of long hair from the opening of the sheath, then disinfect the penis and sheath with a solution of 1/2 per cent. of liquor cresolis compositus, lysol, or trikaseol, or 1 per cent. creolin or carbolic acid, or 1 to 1,000 potassium permanganate in warm water. The only apparatus necessary is a soft rubber tube with a large funnel attached to one end, or an ordinary fountain syringe and tube would serve the purpose. The sheath and the foreskin held with the hand to prevent the immediate escape of the fluid. Elevate the funnel as high as possible and pour in the fluid until the preputial sack is filled. In addition to this, the hair of the belly and inner sides of the thigh should be sponged with antiseptic. This disinfection should invariably precede and follow every service.

An aborting cow should receive immediate attention, and the animal should be removed to separate quarters where she can receive appropriate treatment. The fetus, membranes, and discharges are particularly dangerous and should be gathered up and destroyed immediately by burning or burial in some safe place, and this followed by thoroughly disinfecting the stall. The uterus should be irrigated daily with one of the antiseptics mentioned for the bull, using the same apparatus, and irrigation should be continued until discharge ceases. In addition, the external genitals, root of tail, escutcheon, etc., should twice as strong as that used for irrigation, and this latter treatment should be given the non-aborters as well. Should the preliminary symptoms of abortion be detected, the animal should be removed from the herd and treated as above.

After abortion, breeding should not again be attempted within two months, or until the discharge shall have ceased, as the uterus would either not conceive or would abort again in a short time.

Great care should be used in purchasing cattle, and cows not known to be free from the disease should be kept in separate quarters until this point is determined. If a herd bull is kept, then great care should be exercised to know that the animal used is free of disease and before and after service.

Whenever it becomes necessary to separate diseased and healthy animals, it is especially important that different attendants and utensils be provided for the two groups.

It is manifestly impossible to go into details within the scope of a short article, and it is therefore suggested that a competent veterinarian be employed to supervise disinfection of premises and advise as to the methods of treatment.

Farming with Fertilizer is the Scientific Way

There are many ways in which many things may be done, but of all the different ways there is but one right way. Although the right way seems always to be the last you think about, it is nevertheless the simplest and easiest.

Farming with fertilizer is the most profitable, most pleasing and satisfactory method—the only right way. You will find the work easier, the crops larger and better, and the cost of cultivation smaller.

Our Unmixed Fertilizers are the very best plant foods possible to procure. Unlike the ready-mixed kinds, you can apply these fertilizers in just the right proportions to suit the individual requirements of your soil—you can supply just the elements your land lacks. They are more economical and better in every way than any other.

Ours Are The Better Quality Farm Seeds

The thoroughly tested, carefully selected kind—the kind that grow. We have a full line of Wheat, Barley, Buckwheat, Corn, Peas, Vetches, No. 1 Tomothy, No. 1 Clover, Mangel and Turnip Seed. Get your farm Seeds here, and you'll get the high quality kind at about the same price as you must pay elsewhere for inferior Seeds.

Call or write us today for prices and other information. Get your supply from this big shipment we have JUST RECEIVED today.

A. Horne & Co.

Kent Street, Ch'town Water Street, S'side

A Superb Showing of Canadian Carriages

If you are interested in what is new and nice in Carriage styles you shouldn't fail to see this splendid exhibit of McLaughlin, Canada, Tudhope and Dominion Carriages at our showrooms now. The new line of wire wheel runabouts shown here now is especially nice. Call and see these Carriages while they're all here, you'll find it easier to make a pleasing selection.

Give Our Unmixed Fertilizers An Opportunity To Prove Their Superiority---

All that we ask you to do in order to make you like many others, a walking, talking advertisement of the merits of our unmixed fertilizers, is to give them an honest trial. We know our fertilizers will prove their superiority to your delight and profit.

Science has yet to produce a better crop cultivator—a stronger and more effective plant food than these unmixed fertilizers that we are now offering. Besides being superior in quality they are more economical than others.

Write today for prices and full particulars regarding our unmixed fertilizers. We have some nicely printed booklets containing many helpful hints on how to make your worn out land productive and profitable—ask for them, they're free.

AULD BROS., Limited, Lower Queen Street Charlottetown
