—The citizens of Summerside were shocked last night when they heard of the death of Mrs. H. E. Lefurgy which took place about 8:30 p. m. The deceased had been in ill health for the past year and had spent the winter in California coming home in the spring somewhat improved—but about a month ago she began failing and was confined to her bed. Of late days it was not expected that she could possibly live very long but she died some sooner than expected. She was fifty-two years old and leaves to mourn a sorrowing husband and three brothers, Dr. Burpee Stevens, the Canadian West, Corey Steeves, Summerside and another in the United States. The funeral will take place Saturday afternoon at two o'clock. The Guardian extends sympathy to the bereaved.—S.

Amatite ROOFING

A Modern View of the Roofing Question

Tin makes a good roof if you paint it.
 Canvas makes a good roof if you paint it.
 Any felt makes a good roof if you paint it.
 Even paper makes a good roof if you paint it.
 But Amatite makes a good roof if you DON'T paint it.

On a painted roof, the paint is what gives the real protection. The rest of it has no function except to provide a smooth unbroken surface with no seams or cracks, to which the paint can be applied. Anything which has strength enough to keep the wind from blowing it away or the rain from beating it in, will be waterproof if you use paint enough.
 Amatite Roofing, however, needs no painting. It is a real roofing—a roofing that can be left out in the rain without the slightest damage. The wearing surface is mineral matter embedded into a heavy coating of pitch and never needs painting.

We shall be glad to send you a sample of Amatite free of charge if you will send a postal request for it to our nearest office. The sample will show you what the mineral surface is like.
