

## Stanfield's Underwear

A Talk by the Maker to the Wearer  
(Chapter 2)

Before Shrinking

After Shrinking

**Shrinking The Wool**

In its natural state, wool consists of long, curly, silky fibres, dotted with tiny prongs or branches. These prongs, when wet, interlock with the long strands and pull together, to protect the sheep from rain and dampness.

When wool is woven, the same thing would happen, were it not for the Stanfield process, which makes the prongs on each strand of wool lie down until the knitting is finished.

Stanfield's Unshrinkable Underwear is made absolutely unshrinkable by this special process, invented and perfected by the Stanfields. It is the only method of treating wool, which renders it unshrinkable and unimpaired.

One way of getting rid of the prongs, is to burn them off by plunging the wool into a tank containing lime. As the prongs are a part of the wool, naturally the lime will "eat" the wool as well as the prongs. This is why some imported, and some Canadian-made "Unshrinkable" Underwear won't wear. It has been treated with lime in the effort to make it unshrinkable.

The illustrations above, show wool under the microscope both before and after going through the Stanfield process. They show that all the prongs that make it shrink are made harmless, BEFORE the Underwear is woven. And as there is no "shrink" in the wool, there can be no "shrink" in the Underwear.

Every garment, bearing the Stanfield label, is sold with our standard guarantee of "Money Back If It Shrinks."

All sizes from 22 to 70 chest measure. The label tells the weight—RED label for light—BLUE label for medium—BLACK label for heavy weight.
