

PHONE SO LIFE-LIKE

In the Antarctic with Commander Byrd

In the silence of the Antarctic... Locked in the icy wastes close to the South Pole... Commander Byrd and his intrepid companions are yet only a split-second from civilization—via radio.

Regularly they enjoy the news and music of home—over a Kolster set.

In outfitting history's most scientifically organized Polar Expedition, Commander Byrd, after the most searching tests, selected complete Kolster Radio equipment.

For 21 years Kolster has blazed a trail of leadership in radio. First the Kolster Radio Compass—used on the great ocean liners of today. Then—Kolster Radio—the development of that same genius, Dr. Frederick A. Kolster.

Tens of thousands of people in Canada, Great Britain and the United States have—like Commander Byrd—selected Kolster Radio. Kolster research and high standard of quality, ensure the Kolster owner every modern radio advancement—as can be seen in Kolster's exclusive feature—the Selector Tuner.

You will agree that the New Kolster is "more than ever a fine set". Hear it. Convince yourself.

The New Kolster is available in four All-Electric Models priced from **\$215** and up, less tubes. There are two Battery models priced from **\$60** and up, less tubes.

Made in Canada by **CANADIAN BRANDES LIMITED** TORONTO CANADA

Quicker, easier tuning—only Kolster has it

Removing Carbon

When a liquid solvent of any kind is used for the removal of carbon, the customary way of using it is to pour a certain amount into the spark plug openings, but only a small portion of the surface is covered in this manner. A far better way to apply any solvent is to use an ordinary atomizer, or bulb syringe. This will spray the liquid over a much greater surface and consequently prove more effective in dissolving the carbon.

Re-set the Springs

After springs have been in service for a considerable length of time it is advisable to have them re-set. Oftentimes springs are neglected until

they become so weak that they are not strong enough to hold the body of the car sufficiently when going over a large bump. If the springs have been allowed to become this weak it may be necessary to add another leaf when re-setting them.

The Spare Tire

The spare tire should be given the same attention as to inflation and care as any of the others, for it is the one that is most needed in time of tire trouble on the road. A tire cover should be used to protect it from the sun and rain. It should be tested for air every time the other tires are inspected. And in addition to this, it should be put into service at frequent intervals to keep the rubber from hardening. When

kept out of use too long it loses its elasticity. An idea as to its deterioration when not in use can be proved by placing an ordinary rubber band in a box and allowing it to remain for several weeks, particularly during hot weather. It renders the value of the band useless, and the very same thing applies to a tire that is not used.

There is nothing more important in the job of grinding valves than to see at the finish of the work that every particle of grinding compound is removed from the valve chamber, the valve parts and valve guide. If any particles of the compound are left they will quickly score the cylinder and other parts. Wash all parts thoroughly with gasoline or kerosene.

Guy Axworthy's Pedigree

By W. H. Gocher

Guy Axworthy is the leading sire of trotters. This year his service fee was \$2,000. The speed and racing qualities of his get placed him at the top. For several years his get dominated the colt stakes. This season he led in the aged events with Full Worthy High Noon, and Gayworthy, while his son Mr. McElwyn is represented in the two year old events by Main McElwyn. The returns show that Guy Axworthy has sired four two minute trotters, one hundred 2:10 performers and four hundred with records of 2:30 or better.

Notwithstanding this flood of speed no steps were taken to trace the remote crosses in Guy Axworthy's pedigree and connect his inheritance with the racing qualities of his get. Peter the Great, the super sire of his day, had a bogus cross in his pedigree almost to the end of his career. In the case of Guy Axworthy his maternal line stopped with a doubt as to the sire of his grandam.

Guy Axworthy was foaled in 1902. He was bred by John H. Shults and registered as a bay colt by Axworthy, dam Lillian Wilkes by Guy Wilkes, grandam Flora said to be by Langford, a son of Williamson's Belmont. If anybody felt disposed to make further inquiry the records showed that his dam Lillian Wilkes trotted in 2:17% and that his grandam was registered as Flora, racer—m, foaled 186—said to be by Langford, son of Williamson's Belmont. Bred by—California, owned by William Corbett, San Mateo Farm, San Mateo, Cal.

Neither the color, age or breeder of Flora appears in the Register. Without these the name of the alleged sire should have been dropped. A list of Flora's foals up to 1884 appears under her name. One of them, Joe Arthurton, retired with a trotting record of 2:20%.

Lillian Wilkes was foaled in 1886. After being raced in California she was consigned to a New York sale. John H. Shults purchased her. He bred a number of foals from her. All of them disappeared except Guy Axworthy. Guy Thistle made a pacing record of 2:18% and sired Lotta 2:08%. Lilly Stranger trotted in 2:15%. She produced the trotters T. S. Bingen 2:18%, Tohila Ochato 2:19%, and the pacer Ditt Will 2:14%.

Lilworthy was a sister of Guy Axworthy. She produced the champion yearling pacer Frank Perry 2:15 Worthy Cord 2:16%, and the trotter Lil Cord 2:26. Guy Axworthy was the last foal Lillian Wilkes dropped at Shults-hurst. He made a four year old race record of 2:08%.

John H. Shults considered Guy Axworthy and Olcott Axworthy the best horses bred at his farm. Olcott Axworthy went blind and was sold. Guy Axworthy remained at Shults-hurst until the trotters were disposed of.

For a time Guy Axworthy had an uncertain career. Senator Bailey took him to Lexington where he got Ante Guy 2:03%. The next trip to the auctions put him in New Jersey where he got Lee Axworthy 1:58%. From there he went to Foughkeepsie where he sired Arion Guy 1:59%. The next transfer was to Walnut Hall Farm, where he sired Mr. McElwyn 1:59% and Guy McKinnon 1:58%.

Last June when I was in California C. A. Harrison told me that he had talked with Asa V. Mondenhall in reference to the breeding of Flora, the grandam of Guy Axworthy. Later he put me in communication with Mr. Mondenhall, whose father and uncle bred this mare.

Mr. Mondenhall reports that Flora was a bay mare and a model in conformation. She had extreme endurance, was a good roadster and a trotter.

His father and uncle bred several foals from Flora by stallions owned on their ranch. They sold her to Count Valensin. From his farm Flora passed to William Corbett who bred Joe Arthurton 2:20% and Lillian Wilkes 2:17% her two performers.

Flora was by Langford, a son of Williamson's Belmont, her dam being Pet. She was foaled in 1866. Pet was by General Taylor, the horse that in 1857 made the thirty miles trotting record to harness, which has never been reduced, at San Francisco, time 1 hour, 47 minutes, 59 seconds.

Pet's dam was Dora by Red Bill, sire of the pacer Longfellow. He made a record of 2:19% at Sacramento, May 10, 1872. He also paced three miles to wagon at Sacramento, Sept.

POTATOES WANTED
