Indians Confessed And Released On Suspended Sentence

The two Indian prisoners, Gus Nicholas and Martin Thomas, charged with breaking into and entering the store of Mr. Russell G. Clark, M.L.A., Mr. Stewart, yesterday pleaded guilty before Chief Magistrate Shaw. The robbery occurred on Saturday night when a quantity of tobacco, cigarettes, etc., and the sum of \$12.60 was taken. The prisoners were given two years in Dorchester, suspended on good behavior and were subjected to a severe reprimand. The conditions of their release are that they will report every three months to the Justice of the Peace and restore what they stole. The only witnesses examined were Mr. Clark and Mr. J. J. Trainor, Mt. Stewart.

Mr. J. O. Campbell appeared on behalf of the Crown and Messrs. Mark R. McGuigan and Gordon Holmes for the accused.

SPECTACULAR ACTION DOMINATES LATEST KEN MAYNARD FEATURE AT THE CAPITOL.

Ken Maynard, the popular western star, who in the short space of one year, has won the reputation of the most daring and spectacular trick rider on the screen, is now seen in his latest, and best picture to date, "The Upland Rider" at the Capitol Theatre.

"The Upland Rider" gives Tarzan, the wonder horse, a featured role in the story. He acts an entire sequence with Raven, an equine partner and rival in the cross-country race, which is the highlight of the production.

The story deals with two rival horse ranches, one of which is breeding and raising the old reliable tough cow pony, while the other is endeavoring to introduce a horse of Arabian strain. The latter, because of his appearance, almost succeeds, but the final matter is settled by a cross-country race in which the two horses battle it out to prove superiority.

"The Upland Rider" has a human and dynamic theme, and is the most spectacular outdoor drama ever produced. The cross-country race is by far the most daring thing Ken has been called upon to do since entering pictures. There are perpendicular falls from cliffs into deep lakes, crashings over sand banks and hand to hand fights among the riders. It is pictures of this type that have won Ken his tremendous following the world over. For thrills, action and daring riding, don't miss "The Upland Rider." The Capitol serial and "Came the Dawn," a comedy riot, fill out this fine week-end bill.

PERSONALS

Miss Isabel MacDonald of Ottawa has arrived to spend her holidays with her parents, Mr. and Mrs. W. F. MacDonald, Glenfinnan.

Mr. George Buntain, accompanied by his mother, Mrs. H. V. Buntain and Mrs. C. H. Chandler arrived home Tuesday evening from a motor trip through the Maritimes.

In Memoriam

THE LATE FRANK EDSON VESSEY

The death of Frank Edson Vessey, eldest son of Mrs. Margaret Vessey and the late William Vessey occurred in the city Thursday morning, after a prolonged illness. The deceased, after graduating from Queen Square School, taking first place, and consequently winning the Governor General's Medal, entered Prince of Wales College and afterwards St. Dunstan's University, but owing to ill health this brilliant student was obliged to discontinue his studies.

He was a young man of sterling qualities, loved and esteemed by all who knew him.

He leaves to mourn besides his mother, two sisters, Evangeline and Mildred and one brother, William (Dick) all at home. A sister, Evelyn, died over two years ago.

To the bereaved, the Guardian extends sincere sympathy.

of blindness were sometimes caused by focal infection.

Dr. Gordon while endorsing the remarks of the speaker advised caution in the extirpation of organs which were thought to be the seat of focal infection. He gave as an instance a woman who, troubled with migraine (a kind of headache) had many of her organs extirpated one by one, as they were suspected of being the seat of focal infection—until at last she came to him with most of her organs gone and nothing left but the migraine.

Another speaker drew attention to the importance of the prostate and seminal vesicles as the frequent seat of focal infection. They were often overlooked.

Benign Papilloma of the Bladder

By Dr. R. E. Powell, Urologist of the Montreal General Hospital.

There are in the bladder, in many cases wart-like, benign growths which are very apt to become cancerous. Treatment is by diathermy, via cystoscope, or by supra pubic opening of the bladder, in which case excision may be advisable.

These tumors yield readily to treatment, if they have not become malignant.

He stressed the importance of examining every case of Haematuria (Blood in the urine) as it often indicates such growths.

The lecture was illustrated with an excellent series of Lantern Slides.

Pleural Pains; Their Cause by Dr. H. A. Bray, Superintendent New York Sanatorium, Saranac Lake N. Y.

There are two theories of pleural pain, the friction theory and the muscular theory. Dr. Bray added many facts which told against the friction theory.

For instance, on autopsy many patients who suffered pain before death from pleurisy, were found to have the pleura quite smooth and vice versa.

He also questioned the correctness of the muscular theory.

From an extensive experience with Lobelia Pneuonia and other cases in Bellevue Hospital and taking into consideration the fact that by far the most intense pain was on inspiration, Dr. Bray was of the opinion that the pain was caused by tension of the parietal pleura.

He explained the mechanism of this tension in inspiration in detail, explaining how pain was present in inspiration and absent in expiration. The efforts of the patient to avoid pain (posture, shallow breathing, etc.) he considered, supported this theory also. Strapping of the chest gave immobility to the ribs, thus giving relief from pain.

In conclusion, Dr. Bray said he considered the tension theory a closer approximation to the truth than the other two theories.

ed and occupied about nine months afterwards. After the fire the hospital was conducted in old Government House, a building that had been used for a hospital and convalescent home during and for a year or two after the Great War. The present building occupied now was erected by Bishop O'Leary and occupied September, 1925.

In 1884 the Prince Edward Island Hospital was opened in a building bought from the estate of the late Henry Hassard situated on Longworth Avenue. This building with additions was occupied until 1898, when the present building was erected. The members of the staff of the Prince Edward Island Hospital were:—

Dr. Richard Johnson, Chief of the Staff.
 Dr. Taylor.
 Dr. McLeod.
 Dr. Beer.
 Dr. Warburton.

These were members of the staff at its opening, all of whom have passed along.

A very successful surgical operation was performed a few days ago by Dr. G. C. Hume, when a leg was amputated from a man whilst under the influence of ether. The patient, we learn did not manifest any sense of pain, but was talking jocosely the whole while. Immediately after the operation, the influence of the ether having subsided, he faintly, upon recovering from which, he described the sensations he had experienced. He was perfectly conscious during the operation that he was losing the limb, but did not suffer either from pain or loss of blood until its termination." Taken from the Halifax Chronicle 1948.

Such are the scanty records at our disposal. In fact, whatever medical history of the Island that we have must be summed up in brief sketches of the leading Medical Men of the past years in this Province.

The first medical practitioner that landed on this Island was Dr. Rodrick MacDonald. He and his family were passengers on board the ship "Alexander" that brought here the first Scotch immigrants in 1772. He was a native of Morar, Invernesshire, Scotland, and a graduate of the University of Edinburgh. It appears that he was first after landing somewhere near Scotchfort, probably about the head of the Hillsborough River. From there he moved later with his family to Vernon River where he took up lands and engaged in farming. Here he died after several years leaving a family of several children. The doctor's family cadet of the great and noble family of the clan Ronald who owned at one time a great part of the Highlands of Scotland. There arrived another Dr. MacDonald from Scotland. He belonged to the Borodale branch of the Clan Ronald family and was I think a maternal uncle of Hon. Senator Andrew A. MacDonald of Georgetown. After practising some years in Charlottetown, he returned to Scotland and died there comparatively young.

Dr. Jenkins then went on to give a sketch of the careers of some of the more prominent physicians who later lived and practiced in this province.

The speaker claimed that we now have the knowledge which, if we put it into practice, would cut in half the sickness in the country. But there are those who will not be vaccinated, and those who quibble about the pasteurization of milk. In the future their conduct will seem absurd.

It is remarkable that so few attain complete health, considering it is such a desirable possession—both for the individual and the community.

Dr. Fleming traced the public health movement from its inception at the time of the Industrial revolution to the present.

People are strong for health work, so long as it does not cause them any trouble. But personal hygiene entails personal responsibility. There was opposition to the introduction of the first bath tub in America in Cincinnati in 1842.

People take certain measures of personal hygiene because it makes them more comfortable.

The periodic health examination, said the speaker, offers something which is to be secured in no other way. General advice is good in its way, but individuals are apt to think it is meant for someone else—not for themselves.

There are still many who sleep with their windows tightly closed, and who leave the blinds down for fear of fading the carpet. We need to be periodically checked up, and that is what the family physician will do in the periodic examination. Of late mortality has decreased but mostly in the younger age

THE VALUE OF PERIODIC HEALTH EXAMINATION
