CUTICURA SOAP & OINTMENT

Yes, you can be sure of Firestone tires standing up to any practical speed you will ever travel. Wilbur Shaw, the famous race driver, definitely proved that for you in an actual speedway test.

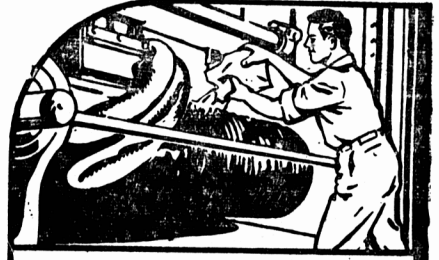

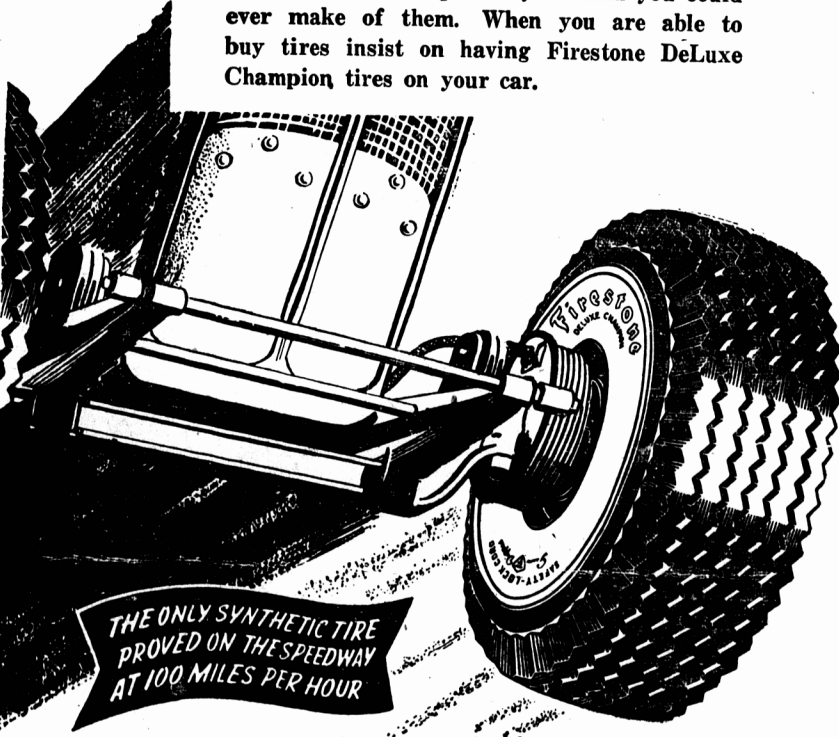

Shaw drove for 500 miles at an average speed of 100 miles per hour - on the straightaways he hit 135 miles per hour.

Not a skid or blowout occurred in this gruelling test - equal to 50,000 miles of ordinary driving.

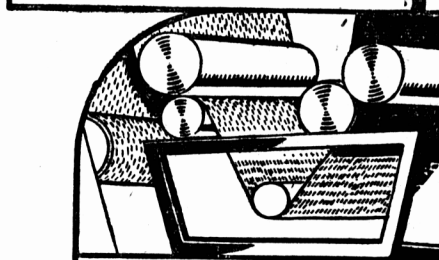

The test was made under supervision of the American Automobile Association.

Regular Firestone tires taken from STOCK were used.

You may never want to drive at 100 miles per hour but it's mighty comforting to know your Firestone tires have the reserve strength and stamina to stand up to any demand you could ever make of them. When you are able to buy tires insist on having Firestone DeLuxe Champion tires on your car.

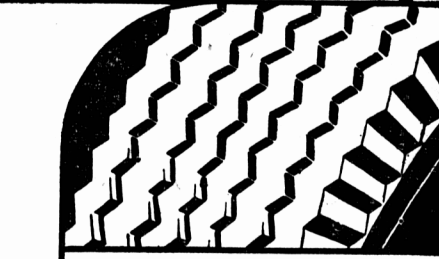

VITAMIC RUBBER. The rubber used in both the tread and cord body contains Vitamin, a rubber vitamin developed by Firestone, which gives extra protection against weather and wear and keeps rubber live and tough.

SAFTI-LOCK GUM-DIPPED CORD BODY. The long-staple cotton fibers of every cord are locked together for extra strength. These cords are then dipped in a special rubber solution for extra protection against blowouts.

SAFTI-SURED CONSTRUCTION. There are two major parts of a tire - tread and cord body. Safti-Sured Construction means that the tread and cord body are welded together inseparably into a unit of extra strength.

GEAR-GRIP TREAD. 3,456 sharp-edged angles in the tread design provide extra protection against skidding. Greater non-skid volume of rubber in the tread and greater tread width give extra traction and extra mileage.
