P.E.I. Potatoes

By A. M. Bell M. D.

XIV

The P. E. Island potato producers claim that a number of factors existing contribute towards producing a superior quality potato, all of which can now be reviewed.

The type of soil over large areas of P. E. Island is admirably adapted for the development of potatoes—being sandy loam, while the sub-soil is underlain by soil containing some gravel, thus affording good drainage. It has good moisture-holding properties and is warm.

Before selecting the chemical fertilizer formula to be employed, the degree of the acidity of the soil to be used must first be ascertained, as it has been found recently that the chemical reaction of the soil must be below the neutral point—in the acid range and the pH index should not be above pH 5.

Just enough lime is thus utilized to maintain this pH index in the soil while the potato is developing.

After the potato is harvested some producers apply a requisite amount of lime so that it may be available to the clover crop, which follows in the rotation of crops employed.

It is necessary that the requisite amount of lime be used, as a magnesium deficiency appears more liable to develop where there is too much excess of acid in the soil, and a deficiency of lime in the soil.

In order for the producer to obtain optimum results, it is necessary that he have a definite knowledge of the pH index of the ground he plans to use.

For this purpose he employs a simple, yet quite reliable test, which consists in taking up with a clean trowel a little of the surface soil from six or more places in the area he plans to use for growing potatoes. A small amount (about 2-3 of a cup) of the clay from each sample thus secured is then separately prepared for the test, by placing each in a small boiled water, adding just enough to make a paste.

The strip of blue litmus paper is then pressed down into each prepared clay sample with a clean piece of wood till well mixed. Each sample is then ready for inserting the testing agent a strip of blue litmus paper obtainable at chemical and drug houses.

The strip of blue litmus paper is then pressed down into each prepared clay sample with a clean piece of wood till well mixed. Each sample is then ready for inserting the testing agent a strip of blue litmus paper obtainable at chemical and drug houses.

Another test to determine the degree of the acidity of the soil indicated by the color produced is a chemical solution—used as an indicator—a solution of brom-thymol-blue. The exact pH value can thus be ascertained from the color shade produced.

The geographical position of P. E. Island also to a considerable extent, influences the climate. Its insular position contributes several factors for potato production, it being recognized that soils generally located near the salt water coast is better suited for its production.

This results in cool nights with its accompanying nightly fall of dew contributing to the indispensable soil moisture. This is also accompanied by many bright sunny days, which is essential for development of the carbohydrate content of plants and more especially of the potato.

On the shores of P. E. Island are found large amounts of a valuable fertilizer in the form of a marine plant commonly known as seaweed. This is cast up on the shore by the action of the waves, where it is easily obtainable. This is rich in nitrogen and potash and even where it may be used as the sole source of fertilizer the potato is excellent in quality and development. The sea-spray extends inland for some distance which

with the other sea products contribute appreciable amounts of necessary elements to the soil as—potash, nitrogen, phosphorus, with traces of iodine, chlorine, iron, copper and fluorine—all of which is needed by the human system for its functioning and the only way for the body to procure it, is in the food consumed.

The snows of winter are referred to, as exerting a very beneficial influence on the soil, breaking up its surface in very fine particles, so that it is in a better state of tilth and affording greater facilities for the essential nitrification, for the production of plants.

The snows of winter are also regarded as very beneficial, as a good covering of snow over the land protects plant roots, as clovers, end in the spring when the snow melts and sinks into the lower soil strata in the form of water—a good reserve of moisture is thus available to the plant as it develops. In fact many old experienced farmers assert that a heavy fall of snow in the late Spring, is as good for the crops as the application of a coat of fertilizer.

(To Be Continued)

Ramsay - Blackwood Nuptials

(Moncton Transcript)

Miss Helen Catherine Blackwood, daughter of Mr. and Mrs. James Blackwood, 318 Cameron street, Moncton was wedded Monday afternoon to J. Archie Ramsay, son of Rev. Dr. J. A. Ramsay and Mrs. Ramsay, of Alma street. The ceremony was a pretty one, and one that attracted the interest of a large number of friends. The service was performed beneath an arch of flowers in the living room of the home of the bride's parents.

The impressive ceremony was conducted by the father of the bridegroom, assisted by Rev. W. E. Orsborn, of the First Presbyterian Church. The home was prettily decorated with flowers for the occasion and the marriage took place in the presence of relatives and close friends of the young couple. The wedding March, was played by Miss Inez Robinson.

Gowned in pink lace with that to correspond, and carrying a bouquet of roses and babies breath, the bride, who was given in marriage by her father, looked charming as the words of the ceremony were pronounced. Her only attendant was her sister, Mrs. Charles Alexander, Providence, R. I., as matron of honor, who wore a costume of pale blue lace and carried a bouquet of pink and white carnations.

The groom was supported by his twin brother, Allan Ramsay. During the signing of the register Mrs. Allan Ramsay sang a solo, "Because."

After the marriage, a buffet luncheon was served. Miss Jean O'Hanley poured tea. Those who assisted in serving were Misses Florence Rayne, Grete Read, Dora Palmer, Ruth Blackwood, Mrs. Stanley Valacer and Mrs. F. H. Ross.

Rev. Mr. Orsborn proposed the toast to the bride and the groom. The table, which was prettily decorated with a three-tier wedding cake, with silver tapers in silver candle-ticks added to the attractive picture. Sweet peas and fern were used to advantage on the table and throughout the room.

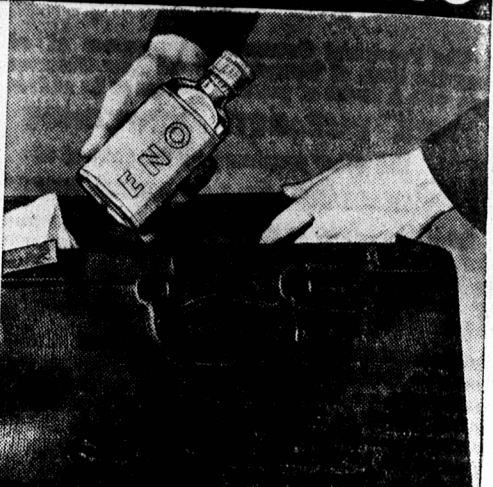

Immediately after the luncheon, the bride and groom left on a motor tour of New Brunswick and Maine.

ALWAYS TRAVEL WITH ENO'S

EXPERIENCED travellers the world over never fail to carry a bottle of Eno's "Fruit Salt". With Eno handy they do not fear train, car or sea sickness, headaches or other ills caused by sudden changes of climate, food and water. And on long trips, Eno corrects the sluggishness caused by lack of exercise.

Take Eno on your travels and keep fit. Drink a sparkling glass before breakfast, another at night. Eno is a natural corrective which keeps your digestive system in first-class order. You eat right, sleep right and feel right. You can buy Eno wherever you travel. Resolutely refuse substitutes.

ENO'S "FRUIT SALT"
THE PLEASANT-TASTING ALKALIZING CORRECTIVE

of rural centres. Symbol of the day is the infant shepherd boy St. Jean and his lamb, and in each procession there will be a float bearing a child, naked except for a loin cloth, shepherd's staff in hand and a lamb at his feet.

In cities the floats, huge and resplendent in decoration, will be motor-drawn. In villages a pair of oxen will draw a hay rack bearing the youth.

Carts and other floats, preceded by thousands of representatives in every walk of life will accompany the young St. Jean on his ride through miles of city streets. The cure and the mayor and children from the convent will walk with the village child.

Both in city and village the spirit of St. Jean Baptiste Day will go with the parade. No French Canadian will remain at home, but all will march with the boy-child or line the route of his triumphant procession.

The holiday feast will begin at night when bonfires are built atop hills surrounding their villages or cities. Receptions will be held, too, and parties in private homes.

worn by women this month, bouquets on evening gowns, fresh flowers for buttonholes and stray flowers on their hair.

INDIAN BEVER WOMEN'S INSTITUTE

The meeting was held at the home of Mrs. Joseph M. Gillis with ten members in attendance. The president opened the meeting and the institute ode was read. There was some discussion concerning the painting of the fence around the school also concerning step signs for the road leading to the school. A donation of cotton had been received from T. Eaton Co. and plans were made for its use. Mrs. Bernard MacLellan was appointed as a delegate to attend the annual convention. It was moved and seconded that a new broom be bought for the school. The sick committee for next month is Catherine Gillis and Mary Shea. The next meeting will be held at the shore beginning at 3 o'clock and the roll call will be a contest. A bountiful lunch was served by the hostess and meeting adjourned.

When preparing ham for baking, the cloves will stay in better if inserted into holes made with an ice pick.

THE FLOWERY WAY

Women are reviving the flowery times of the past—they are wearing flowers in every possible way. Great-grandmother wore them in her bonnet, and at her first ball she wore festoons or rosebuds in her white tarlatan skirts. Great-aunt wore flowers in her hair, stuck in the bun at the back of her head tucked into curls at the side. Grandmother used to clasp a little bouquet with a pie-crust felt round it—though it might only be a "property" of the cameraman. Queen Alexandra and her sister, the Empress of Russia, set the fashion of wearing Parma violets against dark gables. The Burne Jones maidens gazed steadfastly at a solitary white lilly. Flower-laden hats are being

Canada Feeling Effects Present Situation In U. S.

(Moncton Times June 22)

While business conditions are much improved in Canada, the present disturbing situation prevailing in the United States is retarding the march of progress that would, otherwise be taking place in the Dominion, stated Mr. J. A. MacLeod, of Toronto, president of the Bank of Nova Scotia, who passed through the city on the Ocean Limited yesterday, en route to Halifax to attend the funeral of the late Mr. Hector McInnes, K. C., outstanding Nova Scotia barrister and vice-president of the bank, who passed away suddenly at his home on Saturday and for whom obsequies take place today.

Mr. MacLeod who is a native of Prince Edward Island, is another Maritime man who has risen to a high place in the realm of Canadian banking and he is a past president of the Canadian Bankers Association. He was critical of the policy pursued by President Roosevelt through Mr. John L. Lewis, C.I.O. leader, of injecting politics into labor throughout the country and expressed the opinion—the course followed was part of a plan in which the chief executive calculated to secure a third term in the presidency.

Mr. MacLeod in noting the improved trend in business, spoke of the betterment in the lumber trade, as well as in the pulp and paper industry, and in the mines. He felt that in these lines advancement would continue. One of the black spots on the horizon or recovery was the disturbing situation in Alberta as a result of the Social Credit theories being experimented with in this Province, he stated.

of Sterling W.I. Next meeting to be held on July 20 at the home of Mrs. Wallace MacKay. Roll call to be answered with a Health Hint. The meeting closed with the National Anthem.

FEET TIRED?

SOOTHE them with refined herbal oils

Tired aching feet are best relieved Nature's way. Every night bathe them in hot water. Dry carefully. Then gently massage Zam-Buk's soothing, healing ointment into ankles, insteps, soles and between the insteps.

"For preventing blistering and chafing and for keeping the feet healthy I can highly recommend Zam-Buk. I can now walk ten miles a day without any trouble whatever thanks to Zam-Buk."

—Mr. D. Jones

"Being on my feet many hours a day on hospital duty made them ache and burn awfully. But Zam-Buk soon made my feet easy and comfortable. Nurses often use Zam-Buk for foot treatment."

—Nurse F. Ross

FREE. Put an end to your foot troubles immediately. Write for a free sample of this famous herbal ointment to Dept. St. Toronto.

STERLING WOMEN'S INSTITUTE

The June meeting of Sterling W.I. was held at the home of Mrs. John McGuigan with an attendance of fourteen members. The President occupied the chair. Roll call was answered with a Question Box. The minutes of the previous meeting were read and approved. The sick committee reported having made two calls and presented a bill of 60c. Lunch committee for next month: Mrs. Cranford MacKay, Mrs. Thomas Bolger, Mrs. John McGuigan, Mrs. D. J. MacLeod. The secretary reported having received the government grant of \$2.00. The correspondence consisted of a letter of thanks for fruit received, also a letter re Institute Convention.

Mrs. Austin Walsh and Mrs. Laine MacEwen were appointed delegates with Mrs. Wallace MacKay and Mrs. Thomas Bolger as substitutes.

Six members subscribed for Institute News. The program consisted of a "Watch" contest prepared by Mrs. Wallace MacKay and won by Mrs. D. J. MacLeod and Miss Carrie Woodside; also a solo "Annie Laurie" by Mrs. J. E. Fleming. A pleasing feature of the evening was a Birthday Cake with twenty four candles, brought by Mrs. H. S. MacEwen, this being the twenty-fourth anniversary
