HOW TO GAIN IN WEIGHT.

You know you are too thin—you eat and eat, but never get an ounce fatter. Nerves are weak, color is bad, strength seems exhausted. Its not hard to get fat. You must eat more, digest more, exercise more. Try Ferrozone and watch your appetite grow. It turns all you eat into nutriment and building material—fills your veins with rich, red blood—gives you ambition and vigor. For a tissue builder a fattening tonic, one that restores permanently, there is nothing to compare with Ferrozone. Try it and see, 50 cts. at all dealers.

DEAFNESS CANNOT BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed. Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condition of the mucous surfaces.
We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure Send for circulars free.

The cause of numerous diseases and disagreeable habits, heretofore ascribed as constitutional, have been traced directly to the teeth. Blindness, drolling, frothing, loss of flesh, weak eyes, driving on one rein and pulling are very often due to diseased and irregular teeth. Rough edges and sharp corners of the teeth lacerate the mouth, and produce nervousness and irritability; uneven and elongated molars and incisors prevent the proper mastication of the food, producing indigestion and general debility. Decayed molars cause necrosis of the bone, abscesses nasal gleet, etc. These causes should be removed. Decayed teeth should be removed by extracting or trephanning, sharp corners and rough edges should be smoothed down and elongated and uneven molars and incisors cut of f. The common float, or file heretofore deemed sufficient to accomplish this, will not suffice but special instruments devised for the purpose are necessary.
