

# AGONIZING RHEUMATISM

OF 5 YEARS STANDING COMPLETELY RELIEVED BY "FRUIT-A-TIVES"

Be good enough to publish for the information of Rheumatism sufferers how "Fruit-a-tives" relieved my Rheumatism which had at least five years standing. The trouble was in my right hip and shoulder; the pain almost unendurable. This kept up until I started to take "Fruit-a-tives". After a continuous treatment for about six months, I am now in first-class condition. This, I attribute to my persistent use of "Fruit-a-tives."

The above is the letter which Mr. James Dobson of Bronte, Ont., wrote after trying the wonderful "Fruit Treatment" — "Fruit-a-tives" — which consists of intensified fruit juices combined with tonics. If you suffer with Rheumatism, "Fruit-a-tives" will make you well and keep you well. 25c. and 50c. at dealers.

### "SAVE THE FOREST"

Be sure your match is out before you throw it away. Matches have heads but they can't think. Do it for them.

## Carters Seeds Grow

About two hundred Merchants on Prince Edward Island sell Carters Seeds. If you cannot get what seeds you want from them send to us.

Our Seeds and Seed Grain are tested at Ottawa for purity and germination.

Ask for Carters No. 1 "Nickel" Timothy No. 1 "Queen" Mammoth Clover. No. 1 "Rose" Alsike Clover. No. 1 Early Red Clover.

No. 1 Seed Wheat, Seed Oats, Barley, Field Peas, Vetches, Fodder Corn, Buckwheat and a full line of Vegetable and Flower Seeds, and Field Seeds.

Shallots, Onion Sets, Potato Onions

Early Seed Potatoes, Dahlias and Gladioli

Bulbs, etc. Don't neglect the Lawn and Grass Plots, use our "Evergreen" Lawn Grass and Lawn Fertilizer.

## Case The Dennistoun

The Most Famous Matrimonial Case Since Charles II's Time.

(Continued)

Sir Ellis Hume-Williams.—Unless the verdict of the jury makes you, you do not propose to pay back any of those sums?—I don't propose to pay anything in the circumstances. The witness said that once when his wife sent him £100 he was so relieved that he wept. It was sent to him as a present and not as a loan.

Sir Ellis Hume-Williams.—Do you also not propose to repay that £100 unless the jury makes you?—I have no intention.

Does that answer cover all the items in the statement of claim amounting to £336?—I refuse to pay now that this action has been brought.

Replying to the Judge, the witness said that no list of payments had been sent to him before the writ was issued.

Sir Ellis Hume-Williams.—Was it true to say in the original defence that the £336 were repayments to you by Mrs. Dennistoun of sums advanced by you?—They were not repayments.

The witness agreed that the allegations of immorality against Mrs. Dennistoun were not added until his letters to her had been disclosed.

Sir Ellis Hume-Williams.—Was it determined after it appeared that your wife had kept your letters that the only way in which you could possibly defend this action was to attack her and her morality and all her life? Was that why amendments were made?—I certainly had every intention of protecting myself.

Is it the fact that the production of these letters and your discovery that your wife had kept them made you think that you ought to attack her in every way you could?—I attacked her in every way I could.

Referring to his position in 1913, the witness said that he made over everything to his wife to protect it from creditors. He did not doubt that the £1,000 which Sir John Miller lent them had been repaid by Mrs. Dennistoun. They borrowed the £1,000 on the furniture which Mrs. Dennistoun had. He did not agree that the deed which was drawn up at the time made him liable for the payment of the interest.

His Lordship pointed out that both parties were liable for the interest.

The witness agreed that the debt discharged by the £1,000 were mostly his. He did not deny that Mrs. Dennistoun had paid the interest.

Sir Ellis Hume-Williams.—Is it your case that you are not going to pay the £1,000 because you transferred your furniture to her?—I transferred everything to her.

### Appointments Due to General Cowans

Sir Ellis Hume-Williams (to the witness).—Is there any doubt that the Jamaica appointment was procured for you by Sir John Cowans?—None at all.

From that time until you went to the Supreme War Council was there any appointment which was not due to Sir John Cowans?—Every single one of them.

When he took his wife to Paris in 1915, said the witness, he knew that General Cowans was going to meet them, that he was going to return to London alone, and that General Cowans was going to bring his wife back. When he received a letter from his wife about her relations with General Cowans he read it as follows:

Sir Ellis Hume-Williams.—Did she say that it was "the only way to keep him"?—Exactly; but the suggestion that she did it that I might get appointment is untrue.

Sir Ellis Hume-Williams.—It is a fact that before your wife committed adultery with General Cowans you knew that she was going to do it?—I certainly did not.

And that you knew that she was going to do it for you?—That is not a fact.

Unless this story is true that she had done this for you to your knowledge what is the meaning of those words: "It does make me so despicable myself"?—I did despise myself, but I could not stop her.

If she were giving herself to Sir John Cowans because she wanted to—that is the suggestion made on your behalf which you adopt, isn't it?—I adopt the suggestion that she gave herself to Sir John Cowans for her amusements. I say that every time.

The witness added:—I was in love with her.

Sir Ellis Hume-Williams.—In love with her! And allowed her to commit adultery with the man to whom you owed your promotion?—I acknowledge that it was weak, but she was the dominant figure all the way through. She has kept these letters to bring against me. What could I have done in the circumstances?

### Counsel's Retort

Sir Ellis Hume-Williams (with warmth).—If you ask me I will tell you. You could have told your wife that if she ever went near him again you would divorce her. Then you could have gone to London, assaulted Cowans, and to hell with your career.

Mr. Justice McCardle.—Circumstances may call for emotion, but I think that you are exceeding the necessity of the case.

Sir Ellis Hume-Williams.—I was asked what he could have done, and I told him.

ever agreed with his wife that his promotions depended on their keeping in with Sir Cowans.

On the Supreme War Council. By April 24, 1918, you had got a position on the Supreme War Council in Paris?—Yes.

As his Assistant Adjutant-General and Deputy Quartermaster-General? What was the salary? The actual staff pay was the same as an improvement on the last?—In

before, but there were allowances. At that particular moment I was receiving the allowances and my wife was drawing the pay.

What was the salary attached to the post? Was it £1,100 a year, including allowances?—It might be including allowances.

So from the date of your wife's adultery with General Cowans every new job you had received was an improvement on the last?—In

the Labor Corps it was not. From the time when you were at Jamaica at £300 a year until the time you were on the Supreme War Council at £1,100 you had increased pay jobs?—Only in the ordinary way.

You wrote on October 12, 1918: "Well, as to Mrs. H." Had your wife written to you that a Mrs. H. had been saying unkind things about your tolerance of her living

with Sir John Cowans?—I think that at the time people had begun to talk a good deal.

She wrote and told you that all the people were saying that you were acquiescing in her adultery with the general?—That was being said.

Well, as to Mrs. H. I always knew the line that I know D. very well and that he has always seen me through since the smash. You your wife and say, "You see that

took that line?—Quite so. "I have never been asked if he has lived at the flat, but I presume I can treat it as a most commonplace and ordinary thing, if I should ever be cornered that he does?"—She had told me that, I was prepared to tell any one if nobody else had.

Well, as to Mrs. H. I always knew the line that I know D. very well and that he has always seen me through since the smash. You your wife and say, "You see that

this is being said about me. Why don't you leave the General?—I did not do it; that is the only answer I can give.

EVERYBODY is a cross-word puzzle fan now—we have one for every age. Complete set 50 Cts at this office. Get one while they last.

# ONLY GUM-DIPPED CORDS

## Give You This EXTRA Strength, Safety, Comfort and Mileage

Gum-dipping is an exclusive manufacturing process developed by Firestone that has revolutionized all standards of tire performance. Gum-dipping insulates every fibre of every cord with live rubber giving extra stamina and flexing endurance to the cords. Gum-dipping so strengthens the tire carcass that blowouts, tread and ply separation are practically things of the past. Gum-dipped cords ride easier, last longer and provide safety on the road. Gum-dipping is the very foundation of balloon tire success, for balloon tires must have a super-strong flexible side wall.

You need not be a tire expert to understand the advantages of gum-dipping. These simple tests developed on the road and in the laboratory tell you the gum-dipped story in a nutshell.

Gum-dipped Cords cost no more because Firestone has perfected the process to a point of efficiency and economy. Insist upon Gum-dipped Cords from your dealer or specify them on your new car. You'll get more service from your car, more mileage from your tires; you'll experience more satisfaction and your operating costs will be lower than ever before.

### How Gum-Dipping Guards Against Internal Heat

When a tire is on the road the individual cords will rub together and generate destructive heat and friction unless they are insulated. Gum-dipping puts an extra coating of rubber on every cord, separating it from the others and preventing friction and wear. This extra rubber also acts as a bond between the plies preventing ply separation.

Enlarged section of ordinary fabric. Note how cords touch and rub.

Enlarged section of gum-dipped fabric. Note how extra rubber separates cords and prevents rubbing.

### Gum-Dipping Makes Tires Last Longer

Gum-dipping waterproofs every cord and prevents it from absorbing moisture—even moisture from the air. Ordinary cord fabric absorbs moisture from the air or from road water if the tread is cut. This lessens its ability to resist heat. The combination of moisture and the heat generated in the tire when running deteriorates the cord fabric unless it is gum-dipped as this test shows.

BURNER OVEN NO. 1 TEMPERATURE 212°

Contains gum-dipped fabric which won't absorb moisture. When removed gum-dipped fabric is unchanged—has all its strength.

BURNER OVEN NO. 2 TEMPERATURE 212°

Contains ordinary fabric. When removed fabric has turned brown like cloth on an ironing board. Is brittle and weak.

The same thing happens when a tire is running on the road. The only difference is that the heat is generated by road action instead of in the oven.

### Gum-Dipping Gives Extra Strength

Cords in a tire are bent constantly backwards and forwards by road action. The stronger the cords the longer they resist this bending—in other words the longer the tire lasts. This test shows the extra strength of gum-dipped cords and explains why they give more miles.

Two pieces of cord are stretched between two supports and flexed by a revolving arm with an action the same as the cords receive when on the road. Gum-Dipped Cord stands practically twice the amount of flexing as an ordinary cord—in other words a Gum-Dipped Cord is twice as strong. This extra strength gives added mileage and makes practical balloon tire construction with its thin side wall.

Ordinary Cord Shaded area shows how it has absorbed moisture.

### Gum-Dipping Stops Deterioration from Tread Cuts

Gum-dipping soaks every cord in pure rubber and makes the cord waterproof. When treads or sidewalls are cut, ordinary cords will take up water from the road by wicking action. Water or moisture inside the tire rots the carcass. Gum-Dipped Cords being waterproof will not absorb water.

Ordinary Cord Shaded area shows how it has absorbed moisture.

Gum-Dipped Cord Waterproofing has prevented absorption of moisture.

This diagram shows the result of an actual road test: Two tires, one with gum-dipped cords the other with ordinary cords, were purposely cut and driven several thousand miles on wet roads. The gum-dipped carcass was unaffected by moisture. In the other, the tread was loose and the cords had commenced to separate.
