

NYAL STONE ROOT COMPOUND

\$600 Contest

You can win \$100 or one of the twenty other cash prizes by making up a list of words from the thirteen letters in Nyal Stone Root. Go to the Nyal Drug Store in your locality. It has all the famous Nyal preparations, including Nyal Stone Root Compound which restores health and strength, relieves kidney and bladder troubles, rheumatism and sciatica.

Just ask the Nyal druggist for the new word contest sheets which explain everything. Be sure and go to the

NYAL DRUG STORE

Once a trial—always Nyal!

Your Asthma Too. The efficacy of Dr. J. D. Kellogg's Asthma Remedy is not something that is merely to be hoped for; it is to be expected. It seldom fails to bring relief, and in your own individual case it will be the same. So universal has been the success of this far-famous remedy that every one afflicted with the disease owes it to himself to try it.

IT PAYS TO GET THE FACTS

A large proportion of all the nerve energy generated in a normal body is expended in the act of seeing.

Eyes are often found to be defective so that although vision is still good, they are consuming twice or three times their allotted portion of nerve force, thus robbing other vital organs of their motive power.

The result is serious physical disorders—often in remote parts of the body.

Two out of every ten people are in this fix, yet the real cause of their trouble is often not even suspected until a thorough examination discloses the facts.

If there is any reason whatever to suspect eye strain, the common sense thing to do is to have a thorough examination and

GET THE FACTS ABOUT YOUR EYES.

Limbs Were Stiff, Rheumatic All Over

Wonderful Recovery Made By Mr. Duggan, Who Says "Nerviline" Did It All

Georgetown, April 4th.—These terrible pains that made life a burden to Mr. A. Duggan, of 26 South road, of this city, bother him no more. All trace of rheumatic pain has left him, thanks to the curative effect of Nerviline. "No other liniment could have done for me what Nerviline did. My legs were stiff and full of pain. My knee and ankle joints were swollen and ached. The pain penetrated and took out the pain. Stiffness disappeared. Today I am well—thanks to Nerviline."—A. Duggan.

Worms cause fretfulness and rob the infant of sleep, the great nourisher. Mother Graves' Worm Exterminator will clear the stomach and intestines and restores healthfulness.

SOFTENING HARD WATERS

(Experimental Facts Noted.) Moderately hard waters are agreeable to drink and are probably helpful in bone formation in the animal and human economy. On the other hand, in the household and laundry, in addition to being wasteful of soap, hard waters are disagreeable and troublesome. Further, their property of causing chalky deposits in kettles, boilers and hot pipes is distinctly objectionable.

1. Boiling will partially remove "temporary hardness" which is due to the presence of bicarbonate of lime and magnesia. The chemical explanation of this well known action is that boiling breaks up the bicarbonates, driving carbon dioxide out of the water as gas. Simple carbonates of lime and magnesia are left, which, being practically insoluble in water and deposited in the form of a whitish scale or "precipitate." This deposit or precipitate will settle to the bottom of the vessel allowing the now softened and practically chalk-free water to be poured off from the top.

2. Lime will also remove "temporary hardness" from water. This acts at first slight concentration as it is adding lime in order to remove (carbonate of) lime, "Clark's lime process" of softening water is, however, well known and established and is used extensively in large city reservoirs. The explanation is that fresh lime robs the bicarbonates of half their carbon dioxide, all the lime falling to the bottom as simple mono-carbonate of lime.

3. Carbonate of soda (sal soda) and borax will eliminate "permanent hardness" (due to the presence of chlorides and sulphates of lime and magnesia). Carbonate or borax of lime and magnesia are formed, again falling to the bottom as a whitish deposit. The resulting "sodic" water is not very palatable to drink but is satisfactory for laundering purposes.

4. Zeolites or permutits are all complex silicates. They possess an extremely important property of exchanging bases. This exchange property is utilized in water softening, the lime and magnesia in the water displacing the sodium of the permutit, while the sodium passes away in solution. When the permutit ceases to be effective regeneration is simply and efficiently carried out by passing through it a solution (which now has calcium or magnesium for its base) a weak solution of common salt and in this case the calcium and magnesium are carried away in solution leaving the permutit again ready for water softening purposes. Certain commercial firms in Canada and the United States make it their business to install the necessary fittings in factories and dwellings for the full working of the zeolite method of water softening preliminary to the use of the water in a boiler or a heating system.

5. Distillation will free water from all dissolved minerals including "hardness". This extreme measure has to be resorted to where the salinity is due to minerals which cannot be removed by precipitation, for example chloride and sulphate of soda. The objection to distillation is its expense and the "flat" nature of the product—due to absence of any dissolved air. The distillation may be artificially aerated by pouring it several times from one vessel to another. In some semi-arid districts of Alberta where no better sources of water can be found, water stills must be permanently installed in the houses in order to secure a regular supply of potable water.

Can. Nat. Telegraph Appointments

(Special to the Guardian) TORONTO, Ont., May 9.—A number of appointments at the Canadian National telegraphs were announced today by Mr. W. G. Barber, General Manager, Mr. R. W. Ball, formerly General Superintendent in charge of eastern lines with headquarters at Toronto has been appointed General Superintendent of Western lines with headquarters at Winnipeg. Mr. Ball will have jurisdiction over all territory west of Port Arthur to the Pacific Coast.

Mr. J. F. McLaggart formerly treasurer of the Canadian National telegraphs is appointed General Superintendent of Eastern lines with headquarters at Toronto. Mr. McLaggart will have charge of the territory East of Port Arthur to the Atlantic Coast.

Mr. G. H. Steed, formerly General Superintendent of Western lines at Winnipeg, is appointed Superintendent with jurisdiction over lines in British Columbia and with headquarters at Vancouver. The transfer of Mr. Steed to British Columbia was made necessary, General Manager Barber pointed out, owing to the importance of Vancouver and other British Columbia offices which made it necessary to increase the official representatives in the Pacific coast province, as Mr. Steed is a superior officer of the company having spent most of his time in Western Canada and as he has a better known ledger of the actual operation condition and its requirements than any other officer of the company he was selected for this important position.

A circular issued by Mr. J. A. Yates, General Treasurer, also announces the appointment of Mr. T. B. Best, Assistant to the Treasurer Central Region as treasurer of the Canadian National telegraphs. The position of the Assistant to the treasurer is abolished.

Man Dead 200 Years Cures Afflicted

COPENHAGEN, May 9.—In a back yard of a building belonging to a spiritualist congregation in Odense, on the Island of Funen, Denmark, the Hope of Light resides.

Every child in Odense has heard about the strange things behind the walls where "Brother Johannes," who died 200 years ago, is giving consultation each Monday evening, curing all kinds of sickness, and especially rheumatism and diseases of the stomach.

The authorities have recently had occasion to investigate the doings of the congregation, the members of which state that numerous miracles have taken place. One of the members, a business man named Jensen, declares that he has seen invalids throw away their crutches and walk off.

"Recently," he says, "a young girl who had been blind for eleven years called on the congregation. She had consulted various specialists without any result, but 'Brother Johannes' made her see in the course of two weeks."

He mentions another instance of a young girl who was hardly able to walk owing to overlapping toes. She went to the congregation for help, and during the séance a cloth was laid over her feet. Through the medium "Brother Johannes" laid his hand on her head and the miracle took place. When the cloth was removed her feet were quite natural.

Souris Notes

Mr. James Ferguson returned to Souris after undergoing treatment in the Prince Edward Island hospital.

On Thursday and Saturday nights very enjoyable dances were given in the B. I. S. Hall, Souris, by the crew of the Norwegian S. S. Haraldshaug. The music was furnished by the Souris orchestra.

On Friday night a dance was given in the B. I. S. Hall under the auspices of the Souris orchestra.

Expedition To Persian Wilds

(By British United Press) LONDON, May 6.—Deserts and the dangers likely to be encountered in almost unknown country hold no terrors for Mrs. F. A. C. Forbes-Leith. In the course of the next two weeks, she and her husband, Major Forbes-Leith, the English author and explorer, are leaving London for Persia in charge of an expedition. They will be away for about a year, and will collect every possible specimen of mammal, reptile and bird in the Persian country. Their search for specimens will take them into the heart of the Mesopotamian desert, and high up above the snow line in the mountains near the Caspian Sea.

Mrs. Forbes-Leith has cool brown eyes that belie her fragile appearance. She is really a "veteran" explorer, and laughs at the dangers and hardships likely to be encountered.

She is the most enthusiastic member of the party, and is quite confident that the expedition will be successful. She is hopeful, too, that a specimen of the Biblical lion will be captured. Fast dying out, the Biblical lion has been eagerly, but vainly, sought by modern museums.

Explaining the plans, which are now almost completed, Mrs. Forbes-Leith said that the party will make its headquarters near Shiraz, close to the Caspian Sea.

"Do I like the idea?" she said. "Certainly I do. The years that I spent with my husband in Persia were the happiest in my life."

Her husband is equally enthusiastic about the country.

Discussing the animals the party hopes to capture, Major Forbes-Leith said, "Although the Biblical lion is considered extinct, I have every reason to believe that it still exists in some of the barren country between the city of Kirman and the Persian Gulf."

The other specimen particularly desired—the wild ass—is so fleet that a special method of hunting it is being adopted. Every day the animals gather at a drinking-place, and when they have finished drinking they are "foggy" and lose some of their speed. With the help of Arabian horses, the hunters hope to chase the wild ass from the drinking place and ultimately exhaust it.

Another animal of which the museums of the world have failed to acquire a specimen and which the expedition will try to capture, is the snow leopard—similar to the leopard of other countries, but much more ferocious.

This animal will be sought among the highest peaks of the Persian mountains.

Major Forbes-Leith, who will direct the hunting operations, while his wife is in charge of the camp, has had a wide experience of exploration, before and since the war. He is a Fellow of the Royal Geographical Society. He was the first man to travel from England to India by motor-car—a feat which took him nearly six months, travelling 3,000 miles of the journey over country where there were no roads.

Girls Sleuths' Coups

(By British United Press) LONDON, May 9.—Baker street is once more the home of the private sleuth and has become the headquarters of a score of mere girls, who, under the training and leadership of an experienced policeman, are putting the fear of the law into the hearts of criminals from the shoplifter to the bigamist, and are assisting the official police in hundreds of other ways.

Many difficult missions it is certain that a woman detective stands a greater chance of success than a man. In cases of shoplifting so prevalent in the big London stores, to take only one example, a woman detective is less easily recognized and is far more likely to bring the culprit to book.

C. H. Kersey, who served for 25 years at Scotland Yard and Marylebone Lane Police Station, and who originated the novel scheme to train girls as detectives, says that in his experience, he has rarely known a woman detective to fail in cases that had often baffled astute men.

He gave an instance of the kind of work these girls are doing.

One of his staff was standing outside a big Oxford street shop when she overheard a woman remark to a companion, "I'll do the basement at So-and-So's, and you do the shop here."

Undertaken by the girl detective followed the two women into a public-house, ordered some beer, and listened to the women's plans as they revealed them in conversation. The result was that a smart capture was made.

"I have members of my staff in most of the principal London stores," said Mr. Kersey, "and their presence has meant that hundreds of pounds' worth of goods are saved from being stolen."

"Of course, London is not the only city in which the girls work. I am constantly being asked to send by staff abroad, and at the present time there are several employed on various missions on the Continent."

Betty: "Can't guess what I had for breakfast?"

Dicky: "What letter'd it commence with?"

"Commenced with a 'nei'."

"Negg?"

"Nope."

"Norange?"

"Nope, napple!"
