HARDER THAN THE DIAMOND

The diamond, generally regarded as the hardest of all substances, meets its match in the rare metal known as tantalum. A thin sheet of tantalum was once placed beneath a diamond drill, which was kept in operation continuously for three days. The diamond was worn out, but the only effect on the tantalum was a slight indentation. Tantalum is difficult to produce, but when obtained in sufficient quantities may be used to cut diamonds and as a filament for electric lamps.—The American Bo.

"Tea and Coffee Don't Hurt Me"

Can he get away with it?
The drug, caffeine, in tea and coffee, from 1-2 to 3 grains to the average cup, hurts many tea or coffee drinkers, at some time of life, and often hurts them hard.

Caffeine is a powerful irritant that unsteadies the nerves, races the heart, disorganizes the digestive organs and plays havoc with the health of a large proportion of tea or coffee users.

Of course, there are some who go on drinking tea or coffee for years, without apparent harm, at least they don't suspect it, until the cumulative drug, caffeine, has got in its work. I n't it the best plan to play safe with health—quit both tea and coffee and use

pened to be on the wharf after the gang plank was taken down furnished some excitement. He made a run for the steamer and stepped on the projection along the side, known as the "suard" where he held tightly to a hawser, hanging from the deck above. He was quite a distance to the deck and the dangerous position of the man was not noticed by the crew until the shouts of those on the wharf drew their attention to it. Then a run was made for the man and a line lowered and he was hauled up over the rail, but not till the steamer was out in mid-stream.
