**Planets Harbor No Such People As Earth Folks**

(By The Canadian Press)  
MONTREAL, Aug. 23—No beings like those of this world exist on the planets, according to Dr. J. S. Plaskett, C. B. E. Victoria, B.C. astronomer homeward bound from Oxford where he lectured on the stars.  
"I am very often asked if people live on the planets," said Dr. Plaskett, who recently retired as director of the Dominion Astro-Physical Observatory at Victoria. "My answer is that I don't know. Certainly no beings exist on the planets such as exist on this earth. Only two could possibly live—Venus and Mars."  
The earth is very insignificant in the scheme of things, Dr. Plaskett said. For practical purposes the earth might be compared to a tiny fleck of dust on a large photographic record whirling endlessly in space.  
The solar system of which the earth is a tiny unit, forms one grain in the galaxy of stars, the Milky Way. This huge mass of planets is shaped something like a pancake 100,000 light years across and 5,000 light years in thickness.  
The galaxy said Dr. Plaskett, rotates on its own axis and at the dizzy rate of 200 miles a second, yet it takes 200,000,000 light years to complete the rotation.

**Canadian Ploughs and Ploughing in Cuba**

The factors which govern the kind of farm implements employed in Cuba differ in many ways from those encountered in Canada. Consequently, in the manufacture of Canadian implements for Cuba, allowance must be made with respect to some machines for slight variations from what are considered standard types in the Dominion.  
The animals used for draught purposes are oxen and a comparatively small number of mules.  
Cuban cane-land throughout a large area, says the Canadian Government Trade Commissioner in Cuba, is equalled in toughness to a very limited degree only in Southern Saskatchewan. In Cuba where the soil is hard-baked by the sun, it can be broken more readily by oxen with their slow but steady and continuous haul. Irrigation is necessary in many parts of the island, especially where potatoes, rice, and tobacco are grown. The distance between furrows and between plants in each furrow and the depth of ploughing differ from Canadian practice. Weeds and other undesirable vegetation in Cuba are very heavy and ploughs have to be designed specially with respect to clearance to allow ample space for the passage of trash. All ploughs are not so designed. Imported, specially built for sugar-cane work, is proving very satisfactory as it has these high-clearance features. It is heavily constructed to stand the resistance of deep ploughing in hard cane soil and to withstand the additional rough usage resulting from contact with tree trunks and roots.

**OPENING BUSINESS—**The Eastern Hay & Feed Company, Limited, are opening a branch in Charlottetown. A warehouse on Lower Water Street, formerly occupied by N. Robertson, has been taken over and the branch of Mr. Sackville, will be in charge and a wholesale grocery business will be conducted on a strictly cash basis. Another branch of this progressive company is soon to be opened in Bathurst.—Sackville Tribune.  
**LOBSTER SEASON—**Mr. Maud MacDonald, Washington Street, left this week for New Brunswick and Prince Edward Island in the interests of the Maritime Packers, where she will engage factory work in the lobster market, opening and operating August 15th in New Brunswick. The season in Pictou County is now closed until the first of May next year. Maritime Packers give work to over one thousand workers and is spread over Nova Scotia extending to Cape Breton and the Magdalen Islands in the spring season extending over New Brunswick, Prince Edward Island and also one part of the coast of Nova Scotia that is closed in the spring season. They have two crews working day and night to handle the market for live fish which they ship to Boston between Cape Tormentine and Boston, making the trip each way in about fifty hours. The small fish are canned and some are put up in cans fresh from the shell in Moncton. The larger fish are shipped to Boston and New York for restaurant and private use.—New Glasgow News.  
**PERSONALS**  
Mr. George Sweet, Howland, was in the city yesterday.  
Mr. Harry L. Hodgson of Malpeque is leaving this morning for Cleveland, Ohio.  
Mrs. Milton Wheatley has returned to her home in this city after a pleasant visit with relatives and friends in Cambridge and Dedham, Mass.  
Rev. E. S. Weeks of Millstream, N. B., accompanied by his son, Mr. Ernest P. Weeks, B.A., recently returned from Oxford, England, were in the city yesterday renewing friendships. They are on a motor trip through different parts of the province and return home Monday.  
**ISLAND TOURISTS**  
To our fair Prince Edward Island. Through each fertile vale and through the Kenmore hotel where dinner was served. Later Mr. and Mrs. Nickerson proceeded on a honeymoon by boat to New York and Virginia. The bride wore a striking suit of brown check with accessories to match. Mr. and Mrs. Nickerson will reside in their new home in Needham, Mass. The program is a civil engineer, a student of Cornell University, has had a class of 1926. The bride has two year preparatory course in the Latin College of Boston. Many beautiful gifts were received by the bride and groom testifying to the popularity of the young couple.

**Indians Spread Herds Multiply Land Eaten Out**

(By The Canadian Press)  
WASHINGTON, Aug. 23—One of Uncle Sam's internal problems is how to take care of his Indians of Arizona and New Mexico.  
It seems the Navajos of song and story, with their flocks of sheep and goats, are not at all of the "vanishing" type. The humans have increased from 9,000 to 47,000 and the reserves allotted to them by treaties and agreements in 1869 are now far from adequate. Flocks are existing on acres which scarcely will support them.  
Not since the 1860's have the Navajos engaged government attention to such an extent. At that time they were a daring, illusive tribe of marauders making life miserable for pioneers. Government cavalrymen dispatched against them were ambushed and led astray.  
Finally Kit Carson was enlisted to bring the tribe to terms. He burned the Navajo crops, killed their herds and destroyed their orchards, winning his argument on

the old issue of empty stomachs. The Navajos surrendered and were held prisoners for a few years. Then came the treaty of 1869, giving them the acres and stock. They slid quietly into oblivion of self-sufficiency.  
Now their people and their flocks are greatly increased, but their land is not. In 1869 they were given 3,000,000 acres. Later grants increased their tribal lands to 25,000 square miles.  
In 1869 there were about 30,000 sheep and goats. At the peak three years ago they owned 1,385,000 animals which had to be supported on the original amount of land.  
Their flocks have grazed the ranges down to the roots. Heavy rains washed off tons of earth and erosion set in. Water holes disappeared. The land, say government experts, can support only 600,000 animals now and still regenerate itself. By proper management it is thought 600,000 animals could be grazed on Navajo land.  
An attack has been made on the problem of returning the tribe to a better than subsistence level of living. Indian bureau officials are slowly educating Navajo leaders to the need for smaller flocks. Others are reviving the tribe's fabled crafts, rug weaving and silver smithing, to give them another source of cash income.

**Sea Gives Up Hoary Auction**

(By The Canadian Press)  
MONTREAL, Aug. 23—When the merchant ship Canadian Conqueror was bidding at auction to Jamaica recently Davy Jones' locker presented the departing freighter en route to Canada from Australia, with a keeprake. The rumbling winches of the vessel dragged the "mudhook" out of the water with a huge rusty anchor and chain 122 years old.  
Sailors and ship's officers crowded the forepeak to catch a glimpse of this heirloom of 1713 days before the steam-fueled with the usual business of the auctioneer. It was decided to carry the anchor and chain to the North Shore. Meeting closed with selections on the Victoria. Mrs. Sanderson invited the members to her home for the August meeting on the 28th. A dainty lunch was then served and a pleasant evening spent by all.  
**RELAX HANDS**  
The woman who sits quietly, copying the lips and neck relaxed and her hands quite still is ten times lovelier than one who fusses with her dress, frets in her chair and holds her lips in a tense, hard line. Not only does the calm, serene look better at the time, but her chance of getting wrinkles and premature lines are a good deal less.  
When you sit down, let your hands rest in your lap. If you must use them, occasionally in conversation, lift them gracefully and don't wave your arms madly. Don't frown when you read or concentrate on a subject, and don't toss your head up and down to emphasize what you have to say. Learn to make your voice do the work it was intended to do. Your speaking apparatus, used properly upon, should assist to "face and hands."  
If your hands are stiff, making you ill at ease, do some simple exercise to relax the wrists and finger joints. Make believe that you are shaking water from your fingertips. Relax the entire arm shake first one hand and then the other, "tingling fingers" snap together as the imaginary drops fly into space.  
Now pull imaginary taffy. Stretch your arms wide, bringing fingers together. Then let them open again as hands come together. Open and close fingers rapidly, twenty or thirty times. Do all the exercises whenever you are sitting alone.  
To keep lips attractive, learn to relax your tongue. It should hang loosely in your mouth, with the tip of it resting lightly against the lower teeth.  
Don't hold it stiffly against the roof of your mouth.  
**TRAIN SOLDIERS IN TROOP-PLANE**  
ALDRERSHOT, Aug. 23—The British soldier is to be made air-minded, and 200 officers and men of the Royal Norfolk Regiment have been in 10-minute flights in a 24-seater troop-carrying airplane as a starter. The object is to give them practice in entering and leaving airplanes and to accustom them to flying.  
So successful has been the experiment with the Royal Norfolk Regiment that similar flights are being made a feature of the training program. During the initial flights the airplanes passed low over the regiment's barracks, where scores of women and children waved greetings to husbands and fathers in the air.  
"mother. I can forget him."  
"No, don't forget him," said mother gently, "but make it like this. Say to yourself, I am a happy girl and I am going to be still more happy by thinking how very fortunate I am. And I am going to be very kind and thoughtful and try to help other people in trouble."  
Rosie smiled suddenly. "All right you mean that you can be sorry and be very happy, too, don't you?" she said.  
"Child, you do surprise me," sighed her mother. "That's it exactly."

**Sow Perennial Seeds Now For Next Summer**

**TRANSPLANT THIS FALL FOR NEXT SEASON'S BLOOM. COLD FRAME IS IDEAL FOR GROWING SEEDLINGS.**  
Summertime is planting time for the lovely perennial flowers which you should have for next summer's display of color.  
Don't let the hot weather put you off on this important job, or playing them in the garden is the only alternative is buying plants on the market—and taking the variety as they come—and waiting another entire season for blooming plants.  
There are, of course, a few perennials which may be bought as plants in the spring, and which will bloom the first year. Their bloom will never be as free or lovely as well established flowers, however, and most of them will not bloom at all.  
A plan has been worked out for the construction of a cold frame and frames for show tables which may be stored from year to year which has proved very satisfactory. It is a contribution to the artistic effect of the show.  
This table or bench had a double surface and was planned with the fact in view that milk bottles were used to hold the flowers. The lower table top of plants accommodated the bottles. The upper one of Bristol board was placed over the bottles, holes being cut at regular intervals to correspond with the mouths of the bottles. The flowers were thus shown without the obtrusive appearance of the bottles. The sides of the table were draped with cloth and the cardboard of which the upper surface was made was painted green.  
Another detail of importance in staging a garden club show is to provide aisles of sufficient width between the tables. If the club has a large number of tables, the crowding of spectators in narrow aisles is very likely to disarrange the exhibits. Six feet as a minimum and a wider space if the hall accommodates it has been found practicable.  
The width of the exhibition tables should not be more than 4 feet for practical work among the displays, particularly if it is more than a one-day show and it is necessary to replace faded flowers. Too wide tables holding too many exhibits are as distracting as a 4-rung circus.  
**Prune Flowers For Continuous Blooms**  
Summer work in the garden consists largely in pruning. This term may often be applied to the operation of cutting off the faded flowers of annuals and cutting back the top growth of perennials which have finished blooming and which will give a fall crop of flowers if they are so treated. Pruning it is, and the purpose in general is the same as for all pruning. Pruning should not be more than 4 feet for practical work among the displays, particularly if it is more than a one-day show and it is necessary to replace faded flowers. Too wide tables holding too many exhibits are as distracting as a 4-rung circus.

**Add Liatris For Perennial Border**

Tall flowers with graceful spikes are useful in the garden for backgrounds, and as arrangements indoors. The larkspur and lupin are familiar subjects in most gardens, and we might well add the liatris, or Kansas gay feather as it is sometimes called.  
This hardy perennial grows naturally in most of the central and eastern states, and may be easily started from seed now and transplanted into the garden in September. Their rose purple flowers on spikes from 3 to 4 feet in height make an impressive sight in the border, and when used with gladioli in an arrangement they are unexcelled. A peculiar trait of the liatris is that the flowers open at the top of the spike first and continue downward.

This hardy perennial grows naturally in most of the central and eastern states, and may be easily started from seed now and transplanted into the garden in September. Their rose purple flowers on spikes from 3 to 4 feet in height make an impressive sight in the border, and when used with gladioli in an arrangement they are unexcelled. A peculiar trait of the liatris is that the flowers open at the top of the spike first and continue downward.

**Add Liatris For Perennial Border**

Tall flowers with graceful spikes are useful in the garden for backgrounds, and as arrangements indoors. The larkspur and lupin are familiar subjects in most gardens, and we might well add the liatris, or Kansas gay feather as it is sometimes called.
