

PEERLESS FOX NETTING

A Safe, Sturdy Pen at a Low Price

This completely enclosed fox pen is one of the sturdiest, safest and most durable pens built. It is used by hundreds of the most successful ranchers in the country. It is covered top, bottom and sides with PRINCE EDWARD FOX NETTING, which is 6 times stronger than others, specially made to our specifications for use in the salt-laden air of the Maritime Provinces. Every twist of PRINCE EDWARD Netting is solder-locked. It stands the strain of storm and hard use.

Prince Edward Fox Netting for the Economy Pen

- NO. 1 ECONOMY PEN
1 roll 150 ft. x 36 x 1 1/2 x 15.
1 roll 150 ft. x 36 x 2 x 15.
Complete with staples and lacing wire. Price Freight Paid \$23.23
NO. 2 ECONOMY PEN
1 roll 150 ft. x 36 x 1 1/2 x 15.
1 roll 150 ft. x 36 x 2 x 15.
Complete with staples and lacing wire. Price Freight Paid \$24.99
NO. 3 ECONOMY PEN
1 roll 150 ft. x 72 x 1 1/2 x 15.
Complete with staples and lacing wire. Price Freight Paid \$29.45

Spinning and Weaving

Send me your wool to be spun into yarn. 25 cents for single and 28 cents for double. Sizes, fine, medium and coarse. Send by parcel post or freight I pay freight on 100 lb. lots. Weaving done with wool warp and double width suitable for blankets. All white except border where grey may be used. Wool must be clean. Put shippers name and address on all parcels and owners name and instructions inside otherwise I will not be responsible for losses. Send early.

W.M. LANDRIGAN, Souris, P. E. I. 3588-5-4-tue-our-at-mos.

his store window a camera which, with its operator, is invisible to the gazers. One picture of a girl looking longingly at a string of pearls bore the title 'Covetous.' Another showing a young man surreptitiously looking at a pair of silk stockings, and evidently making up his mind to go in and buy, was unlabelled. Two small boys gazing at a mechanical train was charming, and equally so was that of a group of children watching a butterfly crawl up the window pane.

WORLD'S LARGEST DAM OPENED

The Lloyd Dam, which was opened recently at Bhatgar, India, is the largest in the world. At the opening it was shown that the huge reservoir compares favorably with the Assuan Dam, which is 2,500,000 feet less in volume and cost nearly 50 per cent more. The new dam forms the source

of supply to the Nira canals system, and is designed to irrigate a large area which has been subject to famine. The opening ceremony was conducted by Sir Leslie Wilson, Governor of Bombay. SHOPPERS' FACES SNAPPED To obtain natural expressions of shoppers a Berlin merchant has in

NEWSY FARM NOTES By Agricola

BLACKHEAD IN TURKEYS

Years ago the raising of turkeys was a profitable side-line on island farms. My neighbor kept a large flock every summer and I well remember the destruction they caused in my grain fields. He assured me that they fed only on grasshoppers, but they certainly broke down the ripe grain by making tracks through it, so that I was not sorry when the disease made its appearance and every now and then left a defunct turkey in the field as a sign of its presence. At last the ground got so infected that my neighbor went out of the turkey business, and so did most farmers for the same reason.

over at 40 to 70 degrees; then comes gasoline, at 70 to 90 degrees. Following this is naphtha (90 to 120); benzine (120 to 150); kerosene (150 to 300.) Still higher boiling points give the less volatile lubricating oils, while vaseline is the most solid residuum. By freezing some of the residues, paraffin (used in waterproofing paper, sealing preserves, etc.) is obtained in the form of white flakes. The weight of a gallon of gasoline is determined by its specific gravity; thus at 0.630 sp. grav. and at a temperature of 59 deg. F., it would weigh 6.8 lbs. A gallon of water weighs 10 lbs.

One of our most popular magazines—which, by the way, often quotes from these notes—has an informative account of the propagation of 'blackhead,' the disease in question. As the result of much research (how much only a microscopist can appreciate) the causal organism has been traced to the domestic fowl. In what is known as the 'blind gut' of hens and chickens, parasitic worm, called the oecum worm, is common and in the feces passed from the fowl are hundreds of microscopic worm eggs. Contained in these eggs is the exceedingly small organism responsible for the 'blackhead.' The eggs are picked up by the turkeys on range, either in solid food or contaminated water, and the organism or germ finds its way to the liver of the bird, multiplies there and destroys the tissue, thus killing the turkey.

THE PRUNING OF TREES

Trees, it may not be generally known, may be pruned at any season of the year, but the dormant or leafless season is generally accepted as the most suitable time, for then one is better able to make out the shape of the tree and to space the branches properly. There is also less loss of sap, and the work may be done on days when one is not rushed by other labor. Pruning has two objects; the pruning of shade trees and ornamental shrubs is to promote symmetry, and is then a matter of good taste and judgment. In the case of fruit trees, though symmetry is important, especially in young specimens, the main object is to encourage fruit bearing surface.

The remedy then is to keep the hens and turkeys strictly apart; there must be no chance of turkeys getting to the contaminated droppings. This will mean raising them in large pens and will incidentally prevent them from becoming a nuisance to the neighbors. Then, and not till then, will the turkey industry revive.

Heavy pruning or cutting back will delay the fruiting of a young tree, so should be sparingly practised. In an old tree it may be necessary to promote the growth of new wood to replace that which has gone out of bearing and to allow the sunshine and air to get at the inner and lower portions of the tree. Trees which are not thinned out frequently at the bottom and grow bushy at the top, a phenomenon which may easily be observed in any spruce 'bush.' This leads to long straggling branches, bare with the exception of a little fruit at the tips. The pruning of such trees should take the form not only of cutting back the growth of the terminal or outside branches, but also of the lateral or terminal branches. 'Let the sunshine into the centre,' is a good motto, for the sunshine ripens the wood, without which there can be no crop.

GASOLINE AND OTHER THINGS

In another column a few days ago, the statement was made that matter can be destroyed. This reminds me of an argument I once had with my 'boss' of those days. He gave his opinion that gasoline, when exploded in the cylinder of an engine, was destroyed; there was nothing left. I took exception to this and contended that nothing in nature is destroyed; it is only altered. To settle this I wrote to a noted chemist and elicited a reply which may be briefly put thus: 'The explosion of gasoline produces two harmful gases and water vapor—CO, CO2, and H2O. As you say, nothing is destroyed, only altered.' This, of course, concluded the argument.

Never leave stubs; cut back to the trunk, to a lateral, or to a bud, leaving a clean cut which will heal over. Cuts and wounds should be painted to keep out moisture and fungi. Avoid croches; remove them where possible and encourage branches to grow at right angles. In removing large branches, saw a little upwards at first, then down to meet the cut, so that when the branch falls the bark is not torn off.

Gasoline is therefore one of the hydrocarbon compounds and is derived from petroleum by fractional distillation. A thermometer is immersed in the vapor as it comes over from the retort and at certain readings the receiver is changed. A highly volatile and inflammable ether comes

POTATOES AND TURNIPS

We will be buying every day at our warehouse Hogan's Wharf, highest prices for good stock. Accommodation for Boat loads. J. LESTER DOUGLAS, Charlottetown, P. E. I., Phone 798 and 938. 7727-9-19-1mo.
