AN IMPORTANT CROP

The rapid increase in its use for human food and medicinal purposes makes the barley crop one of growing economic importance. Cereals of the Dominion Department of Agriculture state that barley to the extent of upwards of 140,000,000 pounds is used annually as food or in medicines. As food it takes the form of barley flour, cream of barley, pearl or pot barley as well as being used in its natural state. It is particularly valuable in some form of malt in proprietary medicines because of its faculty for turning starches of food into maltose, a form of sugar, making them more readily assimilable.
