

# Insure the Ill

Many people are of the opinion that the sole requirements of one who is sick, are a doctor, some medicine and a bed. But why not protect the patient before the doctors arrival and after he has gone with such requisites as

CLINICAL THERMOMETERS  
BED PANS, SPONGES,  
DISINFECTANTS, HOT  
WATER BOTTLES, ABSORBENT  
COTTON, THERMOS  
BOTTLES, ETC.

We offer a complete line of sick-room comforts at various prices, and are always glad to have you consult us as to just what you need.

## FEEDING OUTDOORS

Those who have used feeding floors for their hogs have found them to be good grain-savers and concrete feeders. They are coming into favor. A good floor should be six inches thick and if not, should have a curb standing from 12 to 18 inches below a surface of the ground. This will prevent the hogs from rooting under the floor. The floor should slope slightly towards one corner in order to carry off rain, or water used in washing. A run around the outside edge will prevent grain from being pushed off into the mud. mixed in the proportion of one sack of Portland cement, two cubic feet of

clean coarse sand, graded up to one-fourth of an inch, and the cubic feet of hard durable gravel or broken stone from one-fourth of an inch to one inch in diameter. Eleven sacks of cement will make enough concrete for 100 square feet of feeding-floor. The concrete should be thoroughly mixed and should contain enough water to make the mass quaky, so that the concrete will flatten out of its own weight. It should be fully tamped, however, then leveled off with a straight edge, and finished with a wooden float. The floor may be laid in slabs each six feet square two-inch lumber being used for forms.

## PERSONALS

Mr. Harry Beirsto of Pownall was among the visitors to the city Saturday.  
Mr. D. A. McNeill, and his son Sterling, Village Green, were visitors to the city on Saturday.  
Misses Pearl and Florence Bell of this city, were inward passengers by the Car Ferry Steamer on Saturday from Picton.

## FOX INDUSTRY

We wish to call the attention of our readers to the advertisement of W. K. Rogers, Treasurer of Rogers-Payton Silver-Black Foxes, Limited, and Silver Foxes and Furs, Limited, offering a limited number of pairs of this year's foxes for sale. The Fox industry has completely passed both the experimental and speculative stage and is now on a sound foundation as any other industry. The recent sale of twenty Prince Edward Island ranch bred Silver Black fox pelts at an average price of \$726.25, made in New York by the Sales Board of the Prince Edward Island Fox Breeders' Association last month, is a fair example of what results may be expected from this industry. Although much higher prices for pelts can reasonably be expected after the war is over and the European market is again opened to us. London, Paris, Berlin, and Petrograd have for a century been the great markets for this rare and beautiful fur and it is a great argument in favour of the soundness of the fox raising industry that prices have not been more affected by the closing of these great markets. Litters of foxes run from two to eight, the average from a large number of pairs being not less than a pair per year. A few ranches last year averaged as high as five young foxes per pair, but even at a pair per pair with pelts selling at even \$500 each and the total expenses for the year, including the expense of raising the young, not exceeding \$150 it can easily be seen there are immense steady profits to be made in this business. The foxes owned by the Rogers-Payton Company and by Silver Foxes and Furs Limited, are as fine as can be found anywhere and are all registered and standard bred. Anyone who is interested would do well to write Mr. Rogers who will be glad to give full particulars and send a supply of authoritative literature giving the complete history and present position of this great industry. 7787

## FROZEN MILK

To test the effects of jacketing milk cans for transportation, milk was cooled to 50 degrees before shipment. Some of the cans were shipped, in an open truck, exposed to the rays of the sun, in an average air temperature of 32.6 degrees; other cans were hair-quilt jacketed and yet others were wrapped in wet burlap. At the end of a fifteen-mile journey, the unprotected cans showed a rise in temperature of the milk of 28.2 degrees; the burlap-covered cans had a rise of 8.2 degrees and the hair-quilt jacketed cans showed a rise of only 5.2 degrees in the three hours consumed on the journey. It is shown by these figures that it pays to jacket the can in summer. Now, what can be done for the milk in winter? Complaints of the condition of milk and cream are frequently sent in to dairy companies during the cold weather, and the explanation made, of the poor quality of the milk is, that freezing is to blame, and that this is a matter over which the wholesalers or retailers have no control. Frozen milk should not be accepted any more than should frozen potatoes. In case of either articles, the bulk

# A Most Profitable Industry Fur Farming

The Sales Board of Prince Edward Island Fox Breeders' Association has just marketed in New York twenty pelts of Prince Edward Island ranch bred foxes at an average price of

## \$726.25 Each

They were not a choice lot as they were largely pelts from animals found undesirable or unprofitable in different ranches. Prince Edward Island Black Foxes breed when one year old. The average number of young raised to maturity is a pair per pair. They produce litters freely until eight or nine years old. The cost of keep will not exceed \$150 per pair per year including raising the young. No more profitable investment can be made than the purchase of a pair of registered Standard Bred Foxes at present prices. I am authorized to sell options on a limited number of pairs of this year's young, all registered and standard bred. If interested write at once for full particulars.

## W. K. ROGERS, Treasurer

Rogers-Payton Silver-Black Foxes Limited  
Silver Foxes and Furs, Limited,  
Charlottetown, P. E. I.

is present, after freezing, as before, but the presence of the bulk in milk (after freezing), is hardly more satisfactory than are the frozen potatoes. Cost of equipment to prevent freezing and additional freight charges would add to the expense of adequately protected milk, but if such milk were obtainable, it is pretty certain that all frozen milk would be rejected by the consumer. Since a bonus is paid for sediment free, and high testing milk, it seems a pity that the effect of extra efforts made to produce such milk should be lost to the consumer, through carelessness with regard to shipment in the winter.

We cannot say if the milk gets its initial freezing before or after it gets into the hands of the city dairyman; but it is sufficient for the spoiling of the milk if it gets frozen at any stage. Maybe this frozen milk is not a menace to the public health, but it certainly is a decided disappointment to the ordinary consumer.

## New London Races
