HINTS FOR The Motorist

BY ALBERT L. CLOUGH

THE ELECTRIC HOOD HEATER

If it is out of the question to provide a heated garage for a car during the winter, starting difficulties, lubrication troubles and some other evils can be lessened considerably by applying local heat to the engine only, either to keep it warm constantly or to somewhat raise its temperature just prior to the starting operation. If only the engine itself be kept from becoming too cold, it is not of great importance if the rest of the car and the garage atmosphere is not warmed and for this reason "under-hood heating is of great ability. An electric heater is the most convenient way of doing this and such heaters, of very neat design are upon the market at reasonable prices. The under-hood heater consists of coils of resistance wire enclosed in a perforated metal casing and adapted to take current from an ordinary lamp socket through a flexible cord, the heater being placed inside the hood space, the hood closed and a hood-cover or blankets placed in position to cover the radiator front and to retain the heat developed as completely as possible. The electrical consumption of these heaters is usually either 100 watts or 200 watts, the former size being recommended for use in weather-tight garages and the latter in loosely constructed ones. The smaller heater costs one cent and the larger two cents per hour, to operate, with current at 10 cents per kilowatt-hour and proportionally more or less if the rate is higher or lower. If the heater is put in operation while the jacket water is still hot, and the hood is very carefully protected against heat losses, engine temperature is quite well maintained, even in severe weather. It is usual to place the heater close to the carburetor and intake where warmth is of most importance and while in very cold weather it may be advisable to keep current on all night under milder conditions, starting the heater a few hours before the car is wanted may take off the chill sufficiently. It is perfectly feasible to use in connection with it an automatic time-switch that can be set like an alarm clock and which will start the heater into action at any desired hour. Of course, a 100 watt incandescent lamp, for instance, one of the 32 C. P. carbon filament type, will give out just as much heat as a regular under-hood heater of 100 watts and may be used successfully, but most motorists seem to prefer the special heating device.

HOTEL ARRIVALS

VICTORIA HOTEL.

J. H. MacDonald, Georgetown; C. S. Day, Liverpool; A. C. Rogers, Summerside; J. G. McGarrigle, St. John; L. S. Price, St. John; S. S. Hessian, Montague; C. J. MacDonald, Perth, Ontario; W. L. EVENING SESSION

7.30 In Methodist Church Public Meeting.
Judge Stewart in chair.
The Most Reverend Archbishop Worrell, D. D.
Rev. J. W. Graham, D. D.
Rev. George C. Pidgeon, D. D.

An Up-to-Date Repair Shop

A Guardian representative had occasion to visit Miller Bros., recently and take a walk through their repair department. He was surprised to see the kind of work being done there. There was a piano being re-strung, a new set of tuning pins having been inserted. The action of this instrument was on the bench being thoroughly overhauled, even to the smallest spring, leather, or piece of felt being replaced, if found necessary. This is a very difficult and particular job, as a piano action, is said to be made up of 7390 separate pieces. There were several organs about, some of which required new bellows, others, new reed boards and nearly all of them new felts in the actions, the old felt being moth eaten. New reeds are put in if required, and they are thoroughly cleaned, voiced and tuned. The cases looked fine, having just come from the varnish room, where they were re-finished, and looked almost as good as new. In some cases they were even better, having more body of varnish than when new.

The phonograph repair work seems to have a prominent place also. A number of machines of various makes were there to be fitted with springs, gear wheels etc., reproducers to have new points and diaphragms and the machines to be lubricated and adjusted. Sewing machines, also, were there in numbers, having been shipped in from all parts of the Island, to be overhauled and cleaned. Some of them probably used by our grandmothers, looked fit for the scrap heap, but judging by the work one of them did, they will all go back to their owner to be used for years to come. Small musical instruments were also in evidence such as violins, banjos, autoharps and even a Hawaiian ukelele. Those phonographs required some repairs and adjustments which would make them as good as they ever were.

A full line of extras is carried for making all repairs, and the shop is equipped with a great variety of tools and appliances, so that the work is done with the least possible delay, consistent with first class efficiency.

Each job that is turned out of this repair shop bears a tag giving the date on which the work was completed, and a guarantee of satisfaction.

Mr. M. Warren is in charge of the tuning department, and is a competent piano and organ tuner, having had a wide and varied experience in this line of work. He was employed for 25 years by one of the largest music houses in Halifax.

Mr. J. L. Curran is in charge of the repair department, and is assisted by Mr. Elmer Sutherland. Mr. Curran has had several years experience in this line of work, and is competent to handle the most difficult repair job in his line. Mr. Warren and Mr. Curran repair, regulate and tune pipe organs also, and at the present time look after all the pipe organs of the various churches in the city. One of the jobs done recently was the moving of the pipe organ in St. Dunstan's Cathedral from the basement to the choir loft in the main church. This organ was re-modelled at the time and is equipped with an electric motor, the only one of its kind in P. E. Island. Dr. Charles Harris, Conductor of the Imperial Choir of London who was in Charlottetown during the past summer, played a selection on this instrument, which he praised for its good tone, saying that it is superior to many of the modern instruments. It is pleasing to note that all this work can now be done here, and that we do not have to employ men from other places to do it.

To test the heat of an oven, put a bit of white paper in it. If too hot the paper will blacken.

Rolling up children's socks stretches them at the top and makes them fall down when worn.

Mix bluing with hot water before adding it to the rinsing water and the clothes will not streak.

We can talk of our ailments quite glibly, we can tell all our friends of our woes.

CHURCH SERVICES

ST. JAMES CHURCH.

11 a. m. sermon, subject The Intolerance of Jesus. 2 p.m. Sunday School and Bible Classes, 7 p.m. sermon, subject St. Andrew and the Scots. All seats free. Visitors welcome. Preacher Rev. Dr. Fullerton.

Jeweler and Engraver

SANDRA THE JEALOUS

By Jane Phelps

WHATS IN A NAME

Once more I became jealous of Miss Pierce, and it was all due to her name — Marta. Everett and I were talking of names, particularly women's names.

"Miss Pierce has a very pretty name," he remarked.

"You like 'Marta'?"

"Yes, very much. I don't think I ever have known anyone of the name.

"Probably taken from some novel. People of her sort are apt to name their children after the heroine in some book of fiction," I said with a sneer.

"Oh, I wouldn't say Miss Pierce came from common people. She is very refined. It is natural refinement too, of manner as well as speech."

"You are quite enthusiastic."

"Yes, I think we have been extremely fortunate. First in having Miss Lane to look after Junior; then in Miss Pierce."

"Because her name is 'Marta'?"

"Don't talk nonsense, Sandra. Her name has nothing to do with her ability to care for Junior."

"But you like the name, you think it adds to her attractiveness?" I insisted, in anything but a pleasant tone.

"I certainly do. If you stop to think you will recall that you also have an odd and attractive name."

"So did your first wife."

It was the first time in months I had mentioned her. Not since Mrs. Currie's call. He turned white and looked severe as he aways did when her name was brought into the conversation. Then said:

"Yes, 'Leola' is an unusual name."

"Which do you like best?" I asked childishly determined to make him declare himself, 'Leola,' 'Sandra,' or 'Marta?' you see I am putting them in the order in which they came into your life."

Everett looked keenly at me as if trying to fathom my reason for continuing the conversation. I put on a look of innocent questioning, and waited for his answer.

"That isn't an easy question to answer. Your name is perhaps the most unusual; 'Marta' the prettiest.

"Oh, you think it the prettiest, do you? Perhaps you think Miss Pierce also the most attractive of the three?"

"What in the world are you driving at, Sandra? Sometimes I think you actually TRY to find something to be unhappy about. Suppose she were the most attractive what then?"

"I should know your reason for wanting me to keep her," I answered throwing all caution away.

"You don't mean—you can't mean—what has Miss Pierce done to annoy you? You have seemed to like her very much — at least I have thought so."

"Well I don't like her! I don't like servants with fancy names! A girl who works out should be Jane or Sarah, or Mary—some plain name suitable to her position."

Everett threw back his head and laughed immoderately — for him. To me his excessive laughter was suspicious. Finally he stopped laughing and said:

"What a queer girl you are Sandra. What difference does a name make? I should think you would like something out-of-the-ordinary." Then, more seriously: "And I do not think it fair to class Miss Pierce as a servant. She is an educated, refined girl. We think enough of her to trust our boy to her. I imagine she has seen better days; that she hasn't always been obliged to work for her living. And"—

"I suppose she has made a confidant of you!"

"No, Miss Pierce and I never have held any private conversation save about you — the time of our anniversary. Aside from that I never have talked to her. But I think her a very capable young woman, and as I have said before, I consider we are very fortunate to have her with us."

I said no more. But the very next day I asked Miss Pierce what her middle name was.

"Katherine," she replied.

"I shall call you 'Katie,' hereafter," I had always addressed her as "Miss Pierce." Then I added: "Miss Pierce is too formal." She looked pleased, then puzzled, as she replied:

"If you don't mind, I perfer 'Marta.' I never have been called Katherine."

"I prefer 'Katie,' and commencing right away, I called her 'Katie.' Everett thought me small, and although he did not say so I felt sure he had made some sort of explanation and apology to Miss Pierce.

Tomorrow — Sandra Hears From Rose Kemp.

MOVING PICTURES

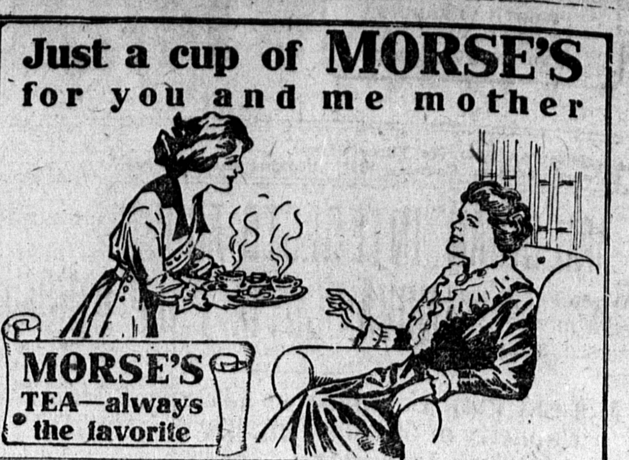
If you look at the faces on every side
As you pass them in the street,
How many with tragedy stamped there-on
For one that is happy you meet.

They register selfishness, pride, and greed
Those faces that once were fair;
In all the hurrying, anxious crowd
A calm, restful face is rare.

They are marred by sorrow, and seamed by pain,
And the hidden faults within
Care written in head-lines upon the face
By the bold, clear hand of sin.

Oh the lasting joy of a happy face,
Its influence reaches far,
And we treasure it quite as loyally
As the motion-picture "Star."

A. L. READ
136 St. Geo. St., Moncton, N. B.



Man's devotion to women frequently arouses her feelings—of the tired kind.

It is easy to walk the tight rope of society if you have a good bank balance.

The other half gets all the happiness out of marriage that the better half puts in.

About all the use some men have for the golden rule is to measure the conduct of others.

Largest Auction Sale of the Season

I am authorized by GEO. B. ELLIS, Esq., Brackley Point Road to sell by
