NO PROFITEERING WITH ZAM-BUK

Before the war, Zam-Buk was 50c a box. All during the war, when the cost of production was rapidly advancing, the price of Zam-Buk to the consumer remained the same. Now, with the war over, while some prices continue to soar, Zam-Buk is still 50c, a box. Not only so, but the same high standard of quality has been maintained throughout.

There has been no profiteering in regard to Zam-Buk. For every box you have bought, you have been asked to pay fair value only.

Is this method of doing business not worthy of recognition? Answer this question by continuing to recommend, to appreciate, and to use Zam-Buk—the greatest household healer of modern times.

Use it for all skin troubles, eczema, ringworm, abscesses, ulcers, boils, pimples, piles, blood-poisoning, chapped hands, cold sores, cuts, bruises, burns, scalds, etc.

All Dealers, 50c Box

SEALER CANNOT REACH MAGDALEN ISLANDS

OTTAWA, Jan. 21.—The Department of Marine has decided that it is practically impossible for the Canadian Sealer to reach the Magdalen Islands with a cargo of supplies for the inhabitants.

The captain of the vessel informs the Department that to put out under present weather and ice conditions might easily mean the loss of the Sealer, which is not equipped with ice breaking machinery.

It has therefore been decided to transfer the cargo from the Sealer to the ice breaker Montcalm, which is now at Souris, and try to get to the Islands with her. Officials are unable to say how long it will take to get this done and make the trip to the Islands.

Weather conditions have been extremely difficult on the east coast this winter. Terrific gales, snow, ice and wind have made rescue work very hard and all that can be hoped for is reasonably moderate weather conditions to aid the efforts of the Montcalm.

LUDENDORFF DISCUSSES HONOR

BERLIN, Jan. 22.—In response to an inquiry as to what he advised those persons to do whose names are on the extradition list of the Entente, General Ludendorff, former First Quartermaster General, said today, "Nobody is obliged to surrender himself voluntarily. It is no breach of honor to place oneself outside the pale of arrest.

WHOLESALE ASSASSINATIONS ARRANGED FOR NEXT MAY DAY

NEW YORK, Jan. 22.—A plot for wholesale assassinations by the distribution of bombs next May day or fourth of July is believed by the police to have been frustrated by the arrest of two raids yesterday of eighteen extremists said to be members of the Union of Russian Workers. Public officials, prominent citizens, agents of the department of justice and police were to be included in the "honor list" of proposed victims, it is asserted. The police think the bombs were to have been sent by expert hurlers. Materials for use in the manufacture of bombs including those of the pipe variety were found.

INDIGESTION

"Pape's Diapepsin" is the quickest, surest relief for a Sour, Acid, Gassy Stomach—Distress vanishes!

Stomach acidity causes indigestion!

Food souring, gas, distress! Wonder what upset your stomach? Well, don't bother! The moment you eat a tablet or two of Pape's Diapepsin all the lumps of indigestion pain, the sourness, heartburn and belching of gases, due to acidity, vanish—truly wonderful!

Millions of people know that it is needless to be bothered with indigestion, dyspepsia or a disordered stomach. A few tablets of Pape's Diapepsin neutralize acidity and give relief at once—no waiting! Buy a box of Pape's Diapepsin now! Don't stay miserable! Try to regulate your stomach so you can eat favorite foods without causing distress. The cost is so little. The benefits so great. You, too, will be a Diapepsin enthusiast afterwards.

HOME ON A VISIT.—Rev. Geo. I. Foster rector of the Church of the Good Shepherd, Cleveland, Ohio and his sister, Mrs. Wilson, from the same city arrived in Charlottetown last night on a visit to their former home here. It is about sixteen years ago since Rev. Mr. Foster left here and his many old acquaintances will be very pleased to see him once more.

PYTHIAN SMOKER.—The members of the Knights of Pythias last evening at their regular meeting conferred the rank of Page on several candidates. At the close of the meeting an enjoyable smoker was held, due to the generosity of the popular chancellor commander, Major J. Parker Hooper. The social hour was spent at cards and an altogether very pleasant time was enjoyed.

BATTERY DANCE.—The Eighth Siege Battery dance held in Orpheus Hall last night proved a decidedly enjoyable affair. It was capably chaperoned by Mrs. (Col) Peake and Mrs. (Dr.) J. S. Bagnall. Over 100 couples were in attendance. Dainty refreshments were served by the Ladies Aid of the Eighth Siege Battery. Great credit is due to all those responsible for the successful manner in which the whole affair was carried out.

BASIC SLAG

(Experimental Farms Note.)

Though as yet we have not accumulated in Canada any very large amount of practical evidence as to the merits of basic slag, data have been obtained from our experimental work which clearly indicate that it may be found an effective and profitable phosphatic fertilizer in many parts of the Dominion. Its usefulness has been shown chiefly in increasing the productiveness of heavy clay loams fairly well supplied with humus, as from dressings of manure. It has also been found of value for muck soils and soils deficient in available lime, both of which types are apt to be acid or sour, the response no doubt being due in part to the alkaline character of this fertilizer from the presence of a certain percentage of free lime.

It has given good returns on grass lands, especially on heavy soils, bringing in the finer grasses and encouraging the growth of clover. In this way it increases the nutritive value of herbage on old pastures. This has been demonstrated beyond dispute by careful and extensive experiments conducted in England and Scotland during the past ten years.

In our own experimental work, carried on chiefly in Eastern Canada, the Maritime Provinces and on the Pacific coast, basic slag has been found valuable for hay (timothy and clover) turnips, mangels and corn—crops for the most part with a long season of growth.

The full return from an application of basic slag will not be obtained the first season, (for its phosphoric acid is not immediately soluble) but its effect will be marked as a rule throughout the rotation. In a sense it is a slow-acting fertilizer, but it is a durable one.

The minimum application advised is 500 pounds per acre, the maximum 800 or 1000 pounds. It is best applied as a top dressing on the ploughed land in the fall or very early spring and harrowed in.

There are many brands of basic slag on the market and the purchaser should therefore carefully scrutinize the guarantee as to percentage of phosphoric acid present and also as to the degree of fineness of the material. The latter is an important matter affecting the availability of the phosphoric acid. From 75 per cent to 85 per cent of the fertilizer should pass through a sieve having 100 wires to the lineal inch. With this degree of fineness, the price should be commensurate with its phosphoric acid content.

FRANK T. SHUTT,
Dominion Chemist.

STOMACH TROUBLES ARE DUE TO ACIDITY

Tells Safe, Certain, Speedy Relief for Acid Indigestion.

So-called stomach troubles, such as indigestion, gas, sourness, stomach-ache and inability to retain food are in probably nine cases out of ten, simply evidence that excessive secretion of acid is taking place in the stomach, causing the formation of gas and acid indigestion.

Gas distends the stomach and causes that full, oppressive, burning feeling sometimes known as heartburn, while the acid irritates and inflames the delicate lining of the stomach. The trouble lies entirely in the excess development or secretion of acid.

To stop or prevent this souring of the food contents of the stomach and to neutralize the acid, and make it bland and harmless, a teaspoonful of bisurated magnesia, a good and effective corrector of acid stomach, should be taken in a quarter glass of hot or cold water after eating or whenever gas, sourness or acidity is felt. This sweetens the stomach and neutralizes the acidity in a few moments and is a perfectly harmless and inexpensive remedy to use.

An antacid, such as Bisurated magnesia which can be obtained from any druggist in either powder or tablet form enables the stomach to do its work properly without the aid of artificial digestents. Magnesia comes in several forms, so be certain to ask for and take only Bisurated Magnesia, which is especially prepared for the above purpose.

Prince of Wales Entertained by The Pilgrims

LONDON, Jan. 22.—H. R. H. the Prince of Wales was the guest tonight at a large and enthusiastic dinner of the Pilgrims. More than three hundred persons were present. The Prince made a speech, partly serious, partly humerous, and with some modesty he delivered personal touches here and there, and had a clamorous reception.

The Prince reaffirmed his intention to visit America, particularly the middle West and far West, saying that the best proof that one had enjoyed a visit was his earnest desire to repeat it. He remarked:

"I am still receiving a large amount of mail from the United States, and not all of it from the fair sex." Another spontaneous touch was greatly cheered. Referring to the chairman's remarks that the Prince, after his tour, was again domiciled as a citizen of England, His Royal Highness said: "I hope I am domiciled as a citizen of the British Empire."

Wearing the broad blue ribbon of the garter and his war medals, the Prince shook hands with all the guests as they arrived.

"My right hand is in pretty bad condition from handshaking. I hope the Pilgrims won't mind if I use my left," he remarked to the chairman. Lord Desborough extending his right hand which was red and swollen. It was noted, however, that to the older men he gave his right hand, while to the rank and file he gave his left.

The Prince spoke at length with assurance and ease. Besides Lord Desborough, the speakers were the Earl of Reading, and the Lord High Chancellor.

Rear Admiral Harry S. Knapp, commander of the United States naval forces in European waters sat at the right of the Prince.

A $10,000,000 CANADIAN COMPANY.

MONTREAL, Jan. 17.—The most important development which has yet taken place in the Canadian motion picture field was announced today, when particulars were given out of a $10,000,000 transaction by which a new Canadian company acquires a chain of theatres running right across the Dominion of Canada with an eventual seating capacity of 45,000, together with the exclusive Canadian rights for twenty years for the first run exhibition of the films of the famous Players Lasky Corporation. The transaction means a great step forward to the control by Canadians of their own motion picture entertainment, and will probably make Canada an important link in a world-wide motion picture organization, embracing the United States and the whole of the British Empire.

Officials of Royal Securities Corporation Limited have been in conference during the last few days with representatives of Famous Players Lasky Corporation of New York, including H. D. H. Connick, general counsel, and N. L. Nathanson, general manager for the Famous Players Corporation in Canada. At the close of the conference the following announcement was made:

Arrangements have been made for the formation of Famous Players Canadian Corporation Limited, which will operate a chain of large motion picture theatres from coast to coast. The Famous Players Lasky Corporation of New York makes a large cash investment in the Canadian company and also grants it a twenty year franchise for first run exhibition of films produced by the Famous Players Lasky Corporation of New York and its subsidiaries.

The Canadian company already has in operation approximately twenty motion picture theatres, including six large theatres in Toronto, two in Vancouver and others in Ontario and the west.

Approximately ten millions dollars of financing enters into the transaction, the bulk of which will be expended on the construction of large moving picture theatres in Canadian cities, such as Montreal, Ottawa, Quebec, Vancouver, Winnipeg, Regina, Edmonton, Saskatoon, Halifax and St. John. By the fall of 1920 the Canadian company should have in operation theatres with a total seating capacity of approximately 30,000, and by the spring of 1921 it plans to operate a complete chain of theatres with a total seating capacity of 45,000.

Directors of the company will include men prominent in the financial and business world, the majority of whom will be Canadians and the bulk of the securities and control of the enterprise will also be in Canadian hands. Adolph Zukor, president of the Famous Players Lasky Corporation of New York will be president of the new company, and N. L. Nathanson, of Toronto, will be its general manager. Expert and technical management will be supplied by the Famous Players Lasky Corporation, of New York.

CANADA NOT ASKED TO SEND TROOPS

(Special to The Guardian.)

OTTAWA, Jan. 22.—The rumor that Canada had been asked by the Imperial Government if she could furnish 50,000 men in the event of hostilities with the Soviet government of Russia, is officially denied.

Sir George Foster, Government leader in Sir Robert Borden's absence, said today that the Canadian government had not been asked to send troops to fight in the Caucasus or in any other theatre and that the matter had not been officially considered.

Two Hospitals in Montreal May Be Joined as One

MONTREAL, Jan. 22.—Negotiations are under way here for the amalgamation of the Montreal Hospital into one great institution with the building of a huge $1,000,000 pavillion for private patients on the land adjoining the present buildings of the Western Hospital. An enormous financial drive to build and equip this new pavillion is planned for 1921. The two hospitals together offer 450 beds in their public wards. Under the amalgamation they wil offer at least 600 beds with considerable additional accommodation for private and semi-private cases.

J. C. Newman, president of the Western Hospital is sponsor for the announcement of the opening of negotiations looking to the above end.

THE COLT'S FIRST WINTER.

Next to the importance of breeding good colts for the future horse supply comes the good care during the first winter of the colt's life. If the colt gets a fair chance from birth until it is twelve months old it should weigh about half as much as it will at maturity. However good judgment is necessary to avoid overfeeding, which is possibly worse than underfeeding. Liberal feeding, however, is very necessary, along with plenty of exercise, to properly develop the colt in both bone and muscle, and there are no better food materials for the purpose than what is grown upon the average Canadian farm, viz. clover, alfalfa, oats, turnips, flax, etc. To properly feed the foal it is not advisable to keep hay before it all the time, yet it is in a similar class to the growing boy, building up frame, so it will require slightly more in proportion to its live weight than will the mature horse, and it is perhaps misleading to some extent to state a given quantity, for the reason that the quality varies so much. Some hay, cut at the proper time and well cured, will have as much nourishment in ten pounds as other hay over-ripe and bleached with sun and rain, will have in fifteen pounds. One pound per day for each one hundred pounds of matured horse is recognized as sufficient hay for him, and one and a quarter pounds per hundred pounds of weight should be sufficient for the foal. If the hay is of good quality, along with it three quarts of good oats, mixed with three quarts of bran and a tablespoonful of linseed meal, should be a sufficient daily ration for the average foal to keep him growing. This amount will require varying according to the smallness or largeness of the breed that is being wintered.

Along with liberal feeding, comfortable quarters are also necessary, especially during resting time. However, as muscle and vigor have to be developed to properly prepare the colt for its after life, considerable exercise is almost as necessary as food, and to get the necessary exercise considerable time in the open air, roaming about at their own sweet will for several hours each day, will build up constitution as nothing else will. His feet should be kept in shape, if such has to be done, with the chisel. If once allowed to grow out of shape there is sometimes difficulty in bringing them into form again. One other thing that should happen during the colt's first winter, it should be trained to lead before it realizes its strength. This it will never forget.—R. H. H.

THE REASON WHY

WHERE DO TEARS COME FROM?

Tears are not made only when we cry. They seem to come only when you cry, because it is then they spill over. A little part of you is making tears all the time and your eyes are constantly washing themselves in them. You have often noticed how you wink every few seconds? You have often tried to keep from winking—to see how long you could keep from winking. Boys and girls often do that, and when you keep from winking what seems a long time, then notice how your eyes ache and feel very dry just before you have to let them wink in spite of how hard you try not to, and just when you think you are not going to. I will tell you just what winking does for the eyes. All of the time your eyes are open the front, or the part you see things with, is exposed to the dust and dirt that fills the air at all times, although we cannot always see the dust. The wind, too, is constantly making them dry. But have you ever noticed that although you never wash the inside of the front of the eye, or pupil, it is always clean? Well, it is because your eye washes itself every time you wink. I will tell you how this is done. Up above each eye, inside of course, there is a little gland called the tear-gland. This gland is busy all the time you are awake making tears. As soon as the front of your eye becomes dry, or if a particle of dust or anything else strike it, the nerve you have there tells the brain, and almost at once the eyelid comes down with a tear inside of it, and so washes the front of your eye clean again. It does its work perfectly and as often as necessary. There is always a tear ready to be used in this way.

—From the Book of Wonders. Published and Copyrighted by the Bureau of Industrial Education. Inc., Washington, D. C.

WHERE DOES THE TEARS GO?

Let me show you. Look right down here at the inner corner of my eyelid, where you will see a little hoe. That is where the tears get out of the eye, when they have washed your eyeball clean. Where do they go then? Did you ever notice how soon after you cry you have to blow your nose? The reason for that is that when the tears go through the little hole they run down into the nose. This making of tears and winking goes on all the time while you are awake, and after they wash your eye off they go on out through this little hole. But when you cry, you make more tears come than you need, so many, in fact, that they cannot all get away through this little hole, and as there is no place else for them to go, and as there is no place to keep them inside the eye, they simply spill themselves right over the edge of your lower eyelid and run down your cheeks.

HOW DOES WATER PUT A FIRE OUT?

This is the first puzzling question, because back in your mind is the thought that since the hydrogen and oxygen are necessary to make a fire burn, it seems strange that water, which is composed of oxygen and hydrogen, will also put it out.

A burning fire throws off heat, but if too much of the heat is taken from the fire suddenly the temperature of the fire is sent down so far below the point as which the oxygen of the air will combine with it that the fire cannot burn. We speak commonly as though water thrown on a fire drowns it. That is practically what happens. Scientifically what happens is that the water thrown upon the fire absorbs so much of the heat itself that the temperature of the fire is reduced below the point where oxygen will combine with the carbon in the burning material and the fire goes out.

To answer the unasked part of your question at the same time I will say that hydrogen and oxygen when combined as water will put the fire out rather than make it burn, more because when these gases take the form of water they are already once burned, and you know that anything, substance or gas, which has already been burned cannot be burned again. It required great heat to make oxygen and hydrogen combine and form water, and it also takes great heat to separate them again. So they are really burned once before they become water.

—From the Book of Wonders. Published and Copyrighted by the Bureau of Industrial Education, Inc., Washington, D. C.
