

The SUMMERSIDE GUARDIAN

AND PRINCE COUNTY CHRONICLE

THE WESTERN GUARDIAN
 AGENTS: Mrs. John Pond, 31 Church Street—Phone 288
 SUMMERSIDE and PRINCE COUNTY

Subscriptions. Advertising should be left with Mrs. Pond.
 The Guardian may be bought daily at any of the following stores in Summerside:
 Water Street, Gourley's Drugstore, Water Street, Toronto Bakery, Water Street, Mark Gaudet, 67 Granville Street.

The Guardian will be delivered to any home in Summerside by boy at 2c per day or 10c per week. Phone 288 for this service or in order to the boy responsible for deliveries on your route.

Summerside is reserved for news of local interest, but advertising of a word, strictly payable in advance.

HIGH Protein Poultry and animal feeds, sold right at Brace's, 5-23-21.

PREVENT DRUG by using Formalin. Taylor Drug Co., Kensington.

AUTOMOBILE storage batteries, new fresh stock, at old prices, obtainable at Brace's, 5-23-21.

FOR SALE—Piano in good condition. Apply 96 Water Street, Summerside, 5-23-21.

THE STORE of W. M. Bowness, Beque, will be closed all day Monday, May 25th, 5-23-21.

CHURCH NOTICE—Malpeque—Kensington—Pretown Presbyterian Churches correction notice. Services Sunday, May 24th as follows: Kensington 11 A. M., Pretown 3 P. M., Malpeque 7:30 P. M. 5-23-21.

ENTERTAINERS SOCIAL CLUB—Mrs. W. N. Huxford was hostess on Friday evening for the ladies social club of Trinity United Church. This was the closing meeting of the year. There was a very good attendance and after the usual business meeting a social half hour was enjoyed and refreshments served.—S

SOCIAL GATHERING — Last Tuesday afternoon Mrs. J. R. Cunningham, Summerside, entertained at tea in honor of Mrs. John J. McNally. The guests included members of the "Ten Club" who presented Mrs. McNally with a gift, and joined in best wishes for happiness in her new home at Tignish, P. E. Island.—O

JOINS AIR FORCE — Corporal Douglas J. Heath who has been in charge of the Summerside detachment of the R. C. M. P., has been commissioned as assistant Provost Marshal. Mr. Heath leaves this morning for his new duties. Capt. L. J. C. Watson, who has been in charge at Alberton for the past several years, has been transferred to Summerside and has already taken up his new duties replacing Capt. Heath. Constable Wm. Swindell of Montague detachment, has been placed in charge of the Alberton detachment.

PERSONALS — A. L. Winsor and children returned to Norton, N. B., after their parents, Mr. and Mrs. Townsend, Summerside.

Mr. Marion McAssey who has returned to his parents, Mr. and Mrs. McAssey, Summerside this morning on return from duties at the Sherbrooke hospital, Quebec.—S

Map shows location of "Russia's Pittsburgh," in the surrounding smaller cities. Russians are smashing German defenses before this great city. Map orientates area in relation to European Russia.

FOR SALE — IDEAL PROPERTY IN SUMMERSIDE

is the property of the late McDonald and formerly of the Beatty property. Consists of a well located barn lot with about five acres of land, sold in good condition. For further particulars apply to

W. HENRY NOONAN, Solicitor, Summerside.

FOR SALE — APARTMENT HOUSE

containing three apartments, situated 289 Water Street, Summerside. Modern conveniences. Terms can be arranged. Apply

T. L. COMPTON, Solicitor, Summerside.

 Directed by HOWARD HAWKS
 Also short subject Shows at 6.45—9.15
 Matinee Tuesday at 3.30

CAPITOL SUMMERSIDE

"TARZAN'S SECRET TREASURE"
 At Capitol Theatre Summerside

Coming on the twenty-fifth anniversary of the filming of the first "Tarzan" picture, M-G-M's "Tarzan's Secret Treasure" opened last night on the Capitol screen as one of the most entertaining of this popular series of pictures. Johnny Weissmuller as "Tarzan," again presents his breath-taking feats of swimming underwater, diving off cliffs and swinging through the trees, while Maureen O'Sullivan offers a fascinating picture of a wife who can do wonders into transforming a tree-house into a comfortable home despite the absence of such modern conveniences as refrigerators, plumbing and electricity.

Laid in the world of the jungle, peopled by wild animals and the perilous traps and devices of nature, the new "Tarzan" tale revolves about Tarzan's association with the members of a scientific expedition who come upon his jungle paradise and, finding gold, seek to pervert the ugliness of civilization upon this untouched haven.

Brilliant Photography
 The brilliant photography of Clyde De Vinna enlivens such sequences as that in which Weissmuller, Miss O'Sullivan and young Sheffield stage an underwater swimming exhibition, as well as such expertly-contrived "thrill moments" as Weissmuller's battle with a crocodile and his escape from a rhinoceros and the savage native rites.

FEB BAG SUPPLY IS VERY CRITICAL
 Every farmer in Canada should realize that the situation with regard to the supply of feed bags is serious, says F. W. Present, Feeds Administrator. It was never more urgent that farmers take the best possible care of their feed bags.

All empty bags should be returned to the dealer from whom the feed was bought. Farmers should not wait until they have accumulated a large number of empty bags before returning them. It is important that every available bag be kept continually in use.

Farmers, as buyers of feedstuffs, are interested in securing their needed supplies, so it is to their advantage to see that containers are available. The bags can be used over and over again for feed, says Mr. Present.

He offers the following suggestions: Handle bags carefully when they are full of feed. Rough handling weakens the jute fibres and weakens the whole bag.

Never pile bags on a cement floor. Pile them on a platform five or six inches off the floor. This will make a rat or mouse that gets into the bags and get any rats or mice that may be about.

Dump the feed as quickly as possible from the bags in a feed bin, barn or other suitable container. Then turn the bag inside out, shake well and hang it on a wire well away from a wall or ceiling so that rats or mice cannot get into them.

Used bags are worth money and by returning them promptly not only feed costs will be reduced, but it will help to conserve the rapidly diminishing supply of jute.

Cultivation is also important in maintaining or inducing vigor in an orchard, although in Prince Edward Island it has been found that apple and pear trees do just as well under sod with much. This is especially true of trees that have reached bearing age.

Peritizers are essential under all systems of orchard management. Cultivated orchards receiving liberal applications of barnyard manure and sod orchards mulched with manure will require very little additional plant food. Commercial fertilizers are excellent for fruit crops but should be supplemented with barnyard manure, green crops plowed down, or in the case of sod orchards, suitable mulching material. A 9-5-7 formula is considered best for most orchard conditions.

Even though the orchard has been carefully pruned, fertilized and cultivated, it is not possible to obtain satisfactory crops of fruit without spraying. By reducing insects and disease, spraying actually increases the productive capacity of an orchard.

Report Nazis Use
 (Continued from page 1)

Russians also claimed the recapture of another populated place far to the northwest on the Kaliningrad front.

The Red Army organ Red Star announced that the struggle had reached a new crescendo of violence, adding:

"The enemy is making furious efforts to take the initiative out of our hands, but this is not last year's relation of the opposing forces is quite different."

"If the enemy has succeeded in obtaining some partial, limited successes, he cannot now solve the problems of great strategic scope to keep the initiative."

On Heels of Enemy
 The general picture drawn from Soviet accounts was of inconclusive fighting in some areas and undesignated sectors, said the afternoon communique. Russian troops broke into a town "on the heels of the retreating enemy."

Air Transport
 (Continued from page 1)

It has been estimated by Grover Loening, former aeronautical adviser to the United States Maritime Commission, that in 10 months American airplane manufacturers could turn out a fleet of 2,000 aircraft capable of doing the work of 100 large fast cargo ships. They would be 80-ton planes like the Douglas B-18 which now is undergoing experimental flights or the Glen Martin seaplane Mars, now being repaired after a mishap on its trial flight.

Can Build Them
 If larger planes are needed, Glenn Martin says he can produce them immediately. The Baltimore airplane manufacturer says his firm "can build a 250,000-pound flying ship, able to carry 80 tons of bombs or cargo to Europe at any time there is a demand for it. Preliminary designs have already been worked out."

The airplane's relatively small carrying capacity is its chief drawback as a freighter but its speed tends to counteract this handicap. It takes two months for a convoyed freighter to sail from New York to the Persian Gulf and, allowing for repairs and unloading, it can make only two or three trips a year. As it carries about 6,000 tons of cargo it will deliver 15,000 tons annually.

TAKE SPECIAL CARE OF FARM MACHINERY
 There never was a time when there was such a urgent necessity for conserving farm machinery and power.

Farm machinery of all kinds is capable of a long useful life, if given proper care and repair. When required say the Agricultural Engineers of the Dominion Experimental Farms.

Here are a few helpful suggestions for maintaining the life and efficiency of farm tractors, electric motors and other power units.

Keep the motor clean. Dirt rots are insidious and does other damage. Use only the cleanest fuels, oils and greases. Serve the air cleaner at least once a day and several times if working under very dusty conditions. Allow the motor to warm up before applying a load. Don't overload the tractor. Avoid stop-start or short run operation as much as possible. Keep the ignition system in first class condition at all times. Check spark plug gaps frequently, keep valve clearances correctly adjusted and adjust carburetor for best performance. The cooling system should be flushed out at least twice a year.

The instruction book supplied with the power unit or machine is the best guide for all items of service and operation.

Take care of the tires as they are now precious. While the war continues there will hardly be any imports of rubber.

With the problems of labour shortage and the difficulty, if not impossibility in some cases, of replacing farm power machinery, it's important that farmers give more care and consideration to the machines and equipment than they ever did before. It's all wanted to keep up food production. Food is one of the most important items in the war.

Ban On Metals For Farm Equipment

The recent order of the Wartime Prices and Trade Board re the conservation of metal in the manufacture of farm machinery, while banning the use of metals in new farm equipment and parts and regulating the use of certain metals in the making of other farm equipment, makes it clear that the simple object is to conserve for war use such metal in the manufacture of specified items as may be considered unessential, and that no restriction is made in the use of metals that are absolutely necessary for efficient farm operations in the nation's war production program.

The list of items in which metal is prohibited, except for reinforcing strips, struts, or joining hardware, comprises over 30 items of farm equipment. There are also other items on the list.

In a further list of farm equipment, the use of rubber, aluminum, antimony, chromium, cobalt, copper, lead, magnesium, nickel, tin, vanadium, zinc, cadmium, and molybdenum is prohibited, except where such metals are essential for proper operation. The list of farm equipment includes cultivators, harrows and discs, hoes, land rollers, ploughs, scuffles, weeders, seed drills, planters, binders, thrashers, hay loaders and rakes, mowers, cream separators, milking machines, pumps, wind mills, fanning equipment, grain cleaners, and many other items.

For example, rubber is permitted in tubing fittings for hand and power sprayers, for bowl rings of cream separators, and rubber wearings of milking machines, and so on. Tin, zinc, and copper are permitted where their use is necessary, the general idea being to protect health, to prevent injury, and to facilitate the efficient operation of the equipment involved. Provision has been made for the Administrator to grant special permission to manufacturers to use during 1942 such processed metals as are now on hand and intended for the purposes covered by the Order.

NOTICE
 No deliveries will be made to trucks at our fertilizer factory until further notice.
 THE ISLAND FERTILIZER COMPANY LTD.

Too much sweetening destroys the natural flavor of many dishes. Here Miss Ruth Ranson of the Consumer Section of the Department of Agriculture, Ottawa, is shown testing sugar-saving recipes which are passed on to housewives of Canada through many channels of education.

Captain the Rt. Hon. Harold H. Balfour, Parliamentary Under-Secretary of State for Air, arrived in Ottawa by bomber from Washington to join other United Kingdom delegates to the United Nations Air Training Conference. He is shown in this photograph chatting with Hon. C. G. Power, Minister of National Defence for Air, who was on hand to greet Mr. Balfour.

When Boy Scouts go after aluminum they go after it. Wouldn't seem as though there could be much left in the kitchens of the district worked over by these Vancouver Scouts.
