**Insidious Eye Strain**

We use this adjective advisedly. Sufferers from Eyestrain may have perfect vision and therefore do not suspect the presence of any evil defect.

The motive power of the entire human organism is Nerve Energy.

Normal eyes, it is computed utilize about 20% of this Nerve Energy, but when Eyestrain is present, a much larger proportion is required. Hence defective eyes through their consumption of an excessive amount of Nerve Energy may seriously affect the functioning of other organs of the body and produce ill health.

When a mother detects from the writhings and fretting of a child that worms are troubling it, she can procure a reliable remedy in Miller's Worm Powders which will expel all worms from the system. They may cause vomiting, but this need cause no anxiety, because it is but a manifestation of their thorough work. No worms can long exist where these Powders are used.

Overalls of egg blue linen with helmet to match were worn by a woman motorist in a race in London recently.

Province of Quebec.

Hay cutting in most districts is well advanced with ideal curing conditions. A better than average crop is expected. Grain crops show continued good growth. Potatoes and other root crops are making satisfactory progress. Pastures continue good. Fruit trees have a good appearance and are well laden. Small fruits are abundant.

Province of Ontario.

Excellent haying weather has prevailed and a good crop has been cured. Spring wheat, barley and oat heads have filled well but the straw is short and the yield will probably be below average. Corn is showing satisfactory growth. Early potatoes are a good crop and sugar beets show improvement since last week. Apples continue very good. Plums are average. Raspberries are somewhat small and require rain. Grasses promise an average yield. Grand pastures have been affected by the lack of moisture. Tobacco has shown good growth and topping has commenced. An average crop is promised.

Maritime Provinces.

Potato plants are blossoming well and are showing good growth. Apples are sizing well and the crop is now estimated at 1,500,000 barrels or 45% above five year average. Grass pasture is very good.

British Columbia.

Apple picking has started in early varieties. Good crops of raspberries and loganberries are being marketed. The early potato crop has been good. Later varieties of tomatoes and other vegetables are in good condition. The estimated yield of apples is 90% of average, pears 85%; peaches 75%; plums, prunes and apricots 85%; hops 100%.

**Crop Report**

Below will be found a brief synopsis of telegraphic reports received at the Head Office of the Bank of Montreal from its Branches. The Branch Managers have complete and intimate knowledge of each local situation and are in close touch with crop conditions in all sections of the districts mentioned.

**General**

Hot dry winds in Alberta and Southern Saskatchewan have caused further damage and the yield even on summer fallow and breaking will be low. Good rains have improved prospects in Manitoba, and in Northern Saskatchewan they are now fairly satisfactory. In Quebec crops in general look promising. In Ontario a good average crop of fall wheat is being harvested but other grains will probably be below average. Rain is now required in most localities. In the Maritime Provinces all crops look well except hay which will be light in many districts. Rain is needed in the interior of British Columbia but the crop situation generally is favourable. Details follow:—

**Prairies Provinces.**

ALBERTA WESTERN AREA. Prospects in the North continue fair and an average crop in the South is expected. The central portion has suffered from hot dry winds but a fair crop is expected from summer fallow and breaking. The sugar beet crop is satisfactory. Hay on irrigated land is good. ALBERTA NORTH-EASTERN AREA. Conditions generally are poor and only a small yield is likely even on summer fallow and breaking. A shortage of feed is feared in some districts. ALBERTA SOUTHEASTERN AREA. Excessive heat has damaged crops which are deteriorating daily. SASKATCHEWAN NORTHERN AREA. Practically all of the wheat is headed out and crops are making good progress. The weather has been mostly favourable but there have been hot winds in some districts and a good rainfall would be welcome. The growth is from seven to ten days behind average but prospects generally are fairly satisfactory. SASKATCHEWAN SOUTHERN AREA. Most of the wheat is in head but not filling out satisfactorily, crops are short and thin and prospects are well below average. Rain is urgently needed. The situation is less serious in the extreme southwest. MANITOBA. Heavy general rains have relieved the drought condition to some extent and all grains are now filling although the stand is short. More moisture and heat are required to bring crops to maturity.

**Seek Ancient Mines On Lonely Island**

SCIENTISTS INVADE "GRAVEYARD OF GREAT LAKES" IN SEARCH FOR PREHISTORIC MINE PITS

WINDSOR, Ont., July 29. — The graveyard of the Great Lakes—Isle Royale in Lake Superior—will be invaded this summer by the forces of science in an attempt to make it yield the keys to riddles as old as this continent. The first of a party sent out by the University of Michigan at the request of the state, began an investigation of the island's strange plant and animal life early in July, and it is expected that the summer of 1930 will also pass away before the investigation is concluded.

The object of the investigation is primarily to study prehistoric mine pits from which an unknown people took the native copper centuries before the "discovery" of the American continent, but it is expected that the party may also find wreckage from many lake boats which have piled up on the rock-bound coast of the Island. It was in the neighborhood of Isle Royale that the steamer Kamloops struck during the storm of December 6, 7 and 8, 1927, and sank with all hands. The Almadoc, too, came to grief in this vicinity at the same time.

The island is 45 miles long by nine miles wide, and is shaped somewhat like a battleship, steaming in a north-easterly direction, with smaller islands like destroyers cruising at its bow. It lies 55 miles north of Keweenaw point, which itself is created by inland mariners, and 18 miles south of the Canadian shore.

Archaeologists, botanists and zoologists, armed with the most modern equipment, will make up the investigating party, and are undaunted by the spirits which legend says have had the island under their protection for untold ages.

The oldest Indian tribes of the Chippewas found by Jesuit fathers when they penetrated to the upper lakes in the late Seventeenth Century, said Isle Royale was the home of the Great Manitou and the fierce storms and treacherous waters defended it against invasion. However, the old legends have long since vanished under the cold scrutiny of the white man. Minong, the ancient name of the island, is no longer believed to be a single huge mass of copper floating about Lake Superior. It has been exactly mapped; its inlets and bays and rocky headlands appear on the maps of the lake survey. More than half a century ago government geologists penetrated its densely forested slopes and charted the composition of its rocks. And yet, this bit of virgin wilderness is in most respects as unknown to man as when it first emerged beneath the last great glacial ice-sheet.

More than 3,000 moose roam the island. Caribou haunt the underbrush and marshes of the interior. The streams, which rush down like miniature torrents from the long ridge that rises 700 feet above the level of the lake, are the homes of the beaver and the mink. The 47 lakes on the island teem with fish and the brooks with brook trout.

But it is not so much as a sportsman's paradise that the island holds its greatest attraction for university scientists. It is rather because there

may hope will be found the answer to many puzzling questions. Undismayed by the failure of others, the archaeologists of the party will inspect every cave and rock shelter, every pit and mine dump which holds any promise at all, in their search for some relic that will help to identify the pre-historic miners and, perhaps, link them indisputably with the mysterious race of mound builders.

It has been estimated that the island contains at least 15,000 pits bearing evidence of ancient mining operations.

Fire was built on the trap rock and the matrix was cracked by a sudden flooding with cold water. Mounds of broken hammer stones or pounders of a stone native to the Minnesota shore indicate they were brought in quantity to the mines to be used in freeing the copper and were discarded when they became too chipped to be useful. Of the thousands of these stones found by previous explorations not one has been discovered undamaged.

One scientist has estimated that, working so slowly, at least 10,000 men laboring for 1,000 years, would be necessary to produce this scarring of the rock. Island copper, like no other in the world, is distinguished in its native state by flecks of pure silver. Tools and ornaments bearing this unquestioned mark of origin have been found in mounds in nearly every state of the Union, and as far south as the Gulf of Mexico.

Apparently this strange race vanished as suddenly as it came. Not one skeleton, hearth or kitchen has been found to hint of their life and habits.

The party will consist of Adolph Murie, assistant curator of mammals at the University of Michigan; Norman A. Wood, university ornithologist; and Dr. Walter N. Koels, Ichthyologist.

The White EMPRESS of CANADA and People You Know

... Sailing from Quebec to Europe on September 6th

There is something about this great White Empress... something that makes an instant appeal to those who are really fastidious about ocean travel. Whether it is her luxurious appointments... her Lounges and Drawing Rooms... Card Rooms... Smoking Rooms... Roman Baths... or her unsurpassed cuisine... or whether it is just that supreme sense of satisfaction one derives from a knowledge of her record-breaking achievements as blue-ribbon ship of the Pacific... it would be difficult to say.

Whatever it is, we do know that she slips quietly out of Quebec Harbour on September 6th, there will be many people aboard that you know!

21,500 GROSS TONS  
Speed 21 Knots

The Empress of Canada will resume her Pacific duties immediately upon her return.

See your local agent.
