Non-Fattening Type of Potato Is Developed By Untermyer Gardener In Tomato Grafts

YONKERS, N. Y., May 23—The successful grafting of potato and tomato plants to produce a new kind of starchless potato that will not make anybody fat was revealed here today at the greenhouses of the Greystone estate of the late Samuel Untermyer.

Visitors at the estate, where a sale is being held this week of all the furnishings, found George H. Chisholm, superintendent and horticulturist, puttering around with the new plants, pleased with the results from his experiments of the last year. With an affection for the homely potato and feeling that it has been neglected by glamour girls afraid of excess poundage, Mr. Chisholm decided to balance the slimming effects of tomato juice against the starch of the spud. The result was the "topato."

In addition to the "topatoes" growing from the roots of the plants like ordinary potatoes, the bushy upper growth of the plants also produces tomatoes. Although they were not ripe enough to eat today, it was suggested that the tomatoes on the upper vine of the plant might absorb some of the taste of the potatoes on the roots.

"The potatoes grown in this manner are completely starchless and are the first of their kind ever grown," Mr. Chisholm said. "They should be a boon to stout women who are afraid to eat ordinary potatoes containing starch. I have had some of the potatoes analyzed by chemists, who reported them to be starchless and unlikely to increase the weight of people eating them."

Mr. Chisholm won renown for a previous experiment last year when he inoculated honeydew melons with liquor, producing rare fruits flavored with cognac, port wine and benedictine.

In the present experiment he raised plants from the ordinary variety of Irish potato and then grafted tomato plants to the tops. The plants, about a dozen of them, are kept in a greenhouse and are grown in gravel without soil. They receive nourishment from magnesium sulphate and six "secret" chemicals which Mr. Chisholm applies twice a day.

The contents of the greenhouses, including 70,000 orchids and twenty-eight other varieties of flowers, will be sold at auction on Saturday. The World's Fair already has contracted to buy 65,000 blue ageratums, creeping zinnias and yellow lantanias for gardens at the Fair.

Oil paintings, antique furniture and tapestries sold at auction today brought $15,872 making a total of $28,596 for the first two days of a three-day sale of house furnishings.

GET your Arsenate of Lead, Arsenate of Lime and Blue Stone for spraying at Rogers Hardware. L-736-5-25-28.

NEW TRANSMITTER READY—The new transmitter for the patrol radio is now installed at Police Headquarters. The receiver for the patrol has not arrived but is expected in the near future.

DAYLIGHT SAVING TIME — Moore & McLeod Limited will be operating on Daylight Saving Time. For your Saturday shopping convenience Moore & McLeod's will be open on the 25th May from 9 A. A. to 11 P. M. Daylight Saving Time. L-726-5-25-11

ENGAGEMENT. — Mr. and Mrs. Frank MacDonald, "The Eyrie," Crapaud, announce the engagement of their eldest daughter, Jean, to Ralph E. Myers, son of Mr. and Mrs. John H. Myers, Hampton. Marriage to take place early in June. L-727-5-25-11.

ST. JAMES CHURCH. —The congregation is called to join, at tomorrow's services, with our fellow-citizens throughout the Empire in responding to His Majesty's call to prayer for the Divine blessings on our war effort. All services are held on daylight saving time.

TRYON — BONSHAW UNITED BAPTIST CHURCH SERVICES. — Westmoreland: Preaching service 11 A. M. Tryon: Preaching service 3 P. M. Albany: Preaching service 7.30 P. M. Rev. Gordon C. Warren, D.D., Professor of New Testament Literature will be the guest preacher at Tryon. Rev. S. D. Trites, M.A., B.D., Pastor. L-685-5-25-1i.

RETURN FROM SACKVILLE — Rev. D. K. Ross and Mrs Ross motored to Sackville on Tuesday to attend the convocation of Mt. Allison University. Their daughter, Etta, who accompanied them home received her Bachelor of Arts degree. Miss Ross won $537 prize. The amount was incorrectly given as $37 in a recent issue.

THE BAPTIST CHURCH. — His Majesty King George VI has asked that Sunday May 26th be observed as a day of prayer through the Empire. Participating therewith, such a service will be held on Sunday morning, the Rev. Harvey L. Denton taking as his subjetc "Prayer Is A Weapon." The Church School meets as usual 2.30 P. M. with all classes and groups except the seniors, who meet at the close of the morning service. At the evening worship service the Rev. Harvey L. Denton will deliver the last of the series of sermons on "So This Is You." The subject for ths occasion is "So You want to be Successful." John Inch, Mus. Bac. Organist and Choirmaster will be in charge of the music of the day. All services will be held at Daylight Saving Time.

8TH BATTERY LEAVES — The officers and men of the 8th Medium Battery R. C. A., Canadian Active Service Force in training here under Major G. G. K. Peake entrained for the mainland yesterday afternoon to undergo a further course of training. Headed by the Artillery Band, the unit presented a fine appearance as they paraded through the City streets on their way to the Railway Depot. The streets were lined with citizens who watched with interest the marching soldiers. A large number of relatives and friends gathered at the depot to bid farewell to the boys.

BREAKS WRIST IN FALL — Master Billy Soper, 11-year-old son of Dr. and Mrs. W. H. Soper had the misfortune of falling from a ladder, in the yard, and breaking his wrist yesterday morning. He was in the act of hoisting a flag on the flag pole when the accident occurred. The youngster was immediately rushed to the City Hospital where the wrist was set and last night he was reported to be "resting comfortably." This was the only holiday accident reported in the City. Dr. Soper, the boy's father, is absent from the City on military duty.

MAN STILL MISSING — After searching all morning and most of the afternoon yesterday, Royal Canadian Mounted Police reported last night that no trace had been found of Mr. W. F. McHugh, believed to have been drowned in the City Thursday. A coat and hat, supposed to be owned by the missing man, were found on the wharf, of Bruce Stewart and Co., Thursday. Mr. McHugh, a recent patient of the City Hospital, was last seen on the wharf about 9.30 on the morning fo his disappearance. Dragging operations have been unsuccessful so far but will probably be continued today. The missing man is a commercial traveller and his home address is 22 Peter Street, St. John, N. B.

"SAFETY FIRST" was presented in King George Hall Wednesday evening to a hall filled to capacity with highly humored spectators. Glen Cotton taking the part of a young husband, gets himself into many bewildering situations. His friend Jerry Arnold (Wallace Moase) the unsuccessful fixer provided plenty of mirth. The Irish maid and her Irish friend capably taken by Bruce and Georgie MacLeod put on a sidesplitting comedy throughout the entire play, Mrs. Barrington Bridges in the person of Glenna Clark took the part of a suspicious mother-in-law, and acted her part to perfection. Nora Taylor and Doris Saunders, the two young wives thinking their husbands are drowned find instead they are serving a term in jail. Ralph MacKay took the part of Elmer Flannel, a college lad who falls in love with a Turkish maid "Zulika", namely Glen MacKay, while Keith Harrington acts as the "Terrible Turk". Needless to say every one of these players deserve credit for their fine performance. The play was directed under the efficient leadership of Norman MacDonald. Specialties between acts were provided by an orchestra from Summerside, Tap dancing by Dian Dovening and a quartet by, Mrs. Ivan Darrach, Miss Dorothy MacKenzie, Messrs Russel MacKay and Arnold Taylor.

The Strawberry Weevel

(Science Service News)

If the petals of the first few strawberry blossoms appearing in a plantation in early spring are found to be perforated with small more or less circular holes, the presence of the strawberry weevil may be immediately suspected, states C. W. B. Maxwell, Fruit Insect Investigations, Dominion Entomological Laboratory, Fredericton. The weevil is a small dark brown beetle, about one-eighth of an inch in length, with a long curved snout or beak.

As the development of the crop progresses the activities of the strawberry weevil may become of considerable concern if the insect is present in any numbers. The chief damage done by this pest is the cutting off of the blossom buds, thus decreasing the prospective crop The insect lays her eggs among the stamens of the unopened bud, then crawls down the stem and severs it, causing the bud to fall to the ground In approximately five weeks the new weevil emerges from the old blossom bud and, after feeding indiscriminately about the plantation for a short time goes into winter quarters. It is believed the insect hibernates in hedges, thickets and fence rows in the general locality of the plantations; a few possibly overwinter in the plantation itself.

The amount of damage done by this pest varies in different years and in different localities. In some places the damage may be only slight, few buds being cut. This thinning effect may be beneficial, particularly in plantations where there is a great profusion of blossom buds. In moderate to heavy infestations three, four or five buds from each plant, or in very severe infestations practically all buds will be cut leaving little fruit for marketing.

The insect is also capable of doing very extensive damage in raspberry plantations by cutting off the blossom buds. The injury must not be confused with that of the American raspberry beetle, which bores into the blossom buds and feeds within, without severing them from the stems.

For the control of the strawberry weevil fairly effective results may usually be obtained by applications of sulphur-arsenate of lead dust. This material should be thoroughly mixed in the proportions of one part of lead arsenate to five parts of finely ground sulphur. The first application should be made as soon as bud cutting has been observed and a second application approximately a week or ten days later. Under no circumstances should poisoned dusts be applied within two weeks of the first picking. As the beetles are active on the plants only during the heat of the day applications are best made at this time. In large plantations a power duster may be used but in smaller plantations the hand-turned duster is quite suitable.

Recent investigations with new insecticides in New Brunswick have shown that a dust mixture of synthetic cryolite, one part, and finely ground gypsum, five parts, applied in the same manner as the sulphur-lead arsenate dust mentioned above, is very effective against the strawberry weevil. Pyrethrum used alone and in combination with gypsum shows considerable promise but results have not been as conclusive as with the cryolite-gypsum mixture.

Losses may be avoided by practising clean farming. All unnecessary bushes and thickets growing in the vicinity of the plantations should be cut down and burned. It is also advisable, where possible to make new plantings at a considerable distance from the old plantation. Now plantations are usually not so severely attacked as older beds and for this reason many growers find it more profitable to harvest only one crop and then plow the plants under.

Feeding The Dairy Calf

(Experimental Farms News)

The care given to the dairy calf from birth to six months of age has a very definite effect on its ultimate usefulness in the dairy herd. Calves worth raising are worth special care. The practice at the Central Experimental Farm, Ottawa, states V. S. Logan, Division of Animal Husbandry, is to separate the calf from its mother immediately and teach it to drink from a pail. It is essential that the new-born calf receive its mother's first milk or colostrum for a period of six to nine days. This milk provides a laxative and also contains substances which inhibit the development of disease germs present in the digestive tract.

Whole milk feeding should be continued for the first four weeks at the rate of about one pound of milk per 10 pounds weight of calf. Beginning at four weeks, skim milk should be gradually substituted for whole milk at the rate of a pound each day. At this change, meal rich in fat may be introduced to take the place of the fat that is removed from the milk. Scalded flaxseed meal with water added to make it the consistency of gruel makes an excellent fat substitute. The gruel should be added to the milk when the calf is four weeks of age, allowing one quarter cup per feed and increasing the amount gradually to a cupful per feed at two months of age. If available, skim milk may be used until the calf is at least six months old. Where skim milk is not available, whole milk should be given for a longer period and gradually replaced with warm water.

At two to three weeks of age, the calves should be provided with all the good quality legume hay they will eat, and at three weeks, a meal mixture such as: 1 part ground oats; 2 parts bran; 1 part corn distillers' grains; 1 part oil cake meal in small quantities. This mixture should be increased gradually to a rate of two pounds per day at three months of age. Clean stalls and clean feeding utensils are positively essential in order to avoid disease in young calves.

Announcing
WHITE ROSE Motor Oil...
"the PICK of them all!"

SETTING a new high standard in value ... in performance ... and in genuine economy, White Rose Motor Oil this month makes its bow to the Canadian motoring public.

Product of years of patient research in Canadian Oil Companies' laboratories ... and of hundreds of thousands of miles of gruelling road tests ... this new motor oil is non-sludging—leaves less carbon—resists heat—is non-corrosive—and has a high viscosity index. White Rose Motor Oil makes starting easy and keeps motors running quietly. Driving with White Rose you can "actually *feel* the difference". That's why motorist everywhere are saying it is "the pick of them all!"

GLASS SILAGE A BOOST TO FARMERS IN SAINT JOHN COUNTY

(Experimental Farms News)

In Saint John County, New Brunswick, during the months of June, July and August, heavy fogs are a common occurrence. These heavy fogs make the curing of hay and grain a very difficult process.

An Illustration Station was established in the spring of 1939 to study problems peculiar to this area states R. C. Parent, Experimental Station, Fredericton, N.B. One of the main projects undertaken was the production of grass and clover silage using molasses as a preservative. The operator, Mr. Fred Shillington, built a temporary silo using snow fence maerial and "Fibreen Paper" for lining. Three other farmers in the neighborhood, namely H. M. Mandigo, A. M. Dewar, and Donovan Bros. co-operated in the venture, each putting up a silo. The operator and the other men report excellent results from feeding their grass silage.

As many farmers in the vicinity of Saint John are in the milk business, the monthly outlay for mill feeds is extensive. The feeding of grass and clover silage has greatly reduced the amount of money expended on mill feeds. Neighboring farmers are following the progress of this experiment with keen interest and are only waiting the results from another year's work before following the lead established.

READING IS ROAD TO GOOD VOCABULARY

One of the most efficacious and certainly the easiest way to enlarge your vocabulary and to learn to pronounce words correctly is to read aloud for ten minutes every day.

Naturally, getting off in a corner far from the dictionary and reading as rapidly as possible for ten minutes won't do much to improve your speech and enlarge your vocabulary. But reading slowly and distinctly, and pausing to look up in the dictionary the meaning and correct pronunciation of ever word with which you are not familiar, will do wonders.

USE WORDS YOU LEARN

Furthermore after you have read all there is in the dictionary about the unfamiliar word, try to use it in a couple of sentences. Make a note of it on a little pad which you keep handy for just this purpose. Now and then, before beginning the daily ten-minute session of reading aloud, review the words on the pad. Use two or three of them in sentences.

Before you begin to read, yawn at least once and take a deep breath to relax your throat and jaw. Pronounce the words clearly but not laboriously so. Always take a deep breath before beginning a new sentence.

SPEAK CLEARLY

When you talk, try to remember these rules. Punctuate your sentences instead of rattling on with no pauses, no periods, no question marks. Open your mouth and let the words out. Do not mutter behind half-open lips. On the other hand, don't over-emphasize. The loud voice, male or female, which puts too much emphasis on each syllable, makes every phrase seem more irritating than the mutterer's.

Don't get any idea that the more softly you speak, the more pleasant your voice will be. The ideal feminine voice is soft, of course, but it has richness of tone.

STUNT PILOT, 74, IS TURNED DOWN

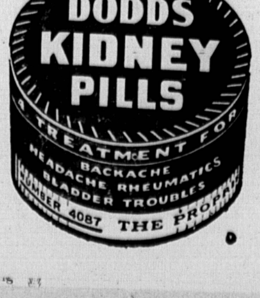
GUERNSEY, May 24—(CP)— Douglas Fawcett, 74, is a bit annoyed with the Royal Air Force because his offer of service has gone unanswered. When war broke out, Fawcett, a qualified pilot, offered himself and his plane but the R. A. F. took only the plane. "They passed me out as an acrobatic flier at the age of 70," commented the man who first flew when he was 67. "Im as fit as a fiddle and and want to do something in this war."

WAR'S HIGH COST KILLS ETON CLUB

LONDON— (CP) —The Etonian country club, one of the exclusive in England, is for sale. The club, formed in 1924 for Old Etonians and parents of Eton College boys is a victim of the war. Gasoline rationing and the blackout have prevented members from reaching it. With a river frontage of 900 feet, it possessed some of the most beautiful gardens on the upper reaches of the Thames.

FULL TRAINS

On the first of the "see-the-children excursions" from London, 5,000 parents were reunited with their evacuated families for the day.



Canadian Wartime Fliers

GROUP CAPTAIN L. F. STEVENSON, OFFICER COMMANDING

By The Canadian Press

Royal Canadian Air Force recruits, training for their wartime jobs at No. 4 Training Command of the British Commonwealth Air Training plan, with headquarters at Regina, have their work cut out for them to follow in the footsteps of their stern-visaged chief, 45-year-old Group Captain Leigh Forbes Stevenson.

But fledging war birds can go about their chores in the knowledge their commander has an especial regard for men of the ranks. He was a tanker at one time himself.

At the age of 16 Group Captain Stevenson joined the 73rd Northumberland Regiment as a private and ever since this fighting flying man from Richibucto, N.B., has been climbing steadily.

Today he has charge of 23 air training units scattered as far west as the Pacific Coast. His job is to look after the administration of all kinds of schools—flying, observing, bombing, gunnery and wireless training stations.

With him at his Regina headquarters Group Captain Stevenson has a staff of 22 officers, ... men and 12 civilians. He has watched the R.C.A.F. grow since he joined it in March, 1921, but ever since he first signed up for service with the Northumberland Regiment 29 years ago his activities have been varied and calculated to give him experience that now becomes valuable in organization of air training administration in western Canada.

From the Northumberland Regiment young Stevenson transferred to the 32nd Manitoba Light Horse and three months after the First Great War he was on strength of the Canadian Expeditionary Force.

Later he transferred to the 8th Battalion and in July, 1916, was commissioned and appointed bombing instructor with the 145th and later the 236th battalion. In January, 1918, he joined the Royal ... Corps but returned to the infantry after the Armistice.

Since the First Great War, in addition to his service with the R.C.A.F., he worked three years with the old Union Bank of Canada and as a sub-chief with the Dominion Forestry Service.

Group Captain Stevenson has been Canadian liaison officer at the British Air Ministry in London and attended the Royal Naval staff college at Greenwich. For some years he commanded the Camp Borden, Ont., R.C.A.F. station.

REAL Satisfaction WITH REGAL

Whether you're an amateur, expert, newlywed or matron—you'll get more baking satisfaction with REGAL Flour. The best cooks in the Maritimes are REGAL users, because they've found through experience that results are better and economy greater when this fine flour is used. REGAL is top-notch for any purpose and simply wonderful for bread.

REGAL Flour
