BISON FURNACE

Twice as much heating surface is covered by the fire in a Bison Hot Water Furnace as in any other.

The flames are drawn up through the side flues, then down and to the chimney through the middle flue.

Burns all the gas and traps all the heat against the top section.

In other furnaces the fire travel is practically a direct one to the chimney, and much valuable heat escapes, the important top section getting less than any of the others.

The Bison has more good heating points than all other heaters combined.
