ICEBERGS OF LAND ORIGIN

Menace of Atlantic Discussed by University of Sheffield Geography Expert

MONTREAL, Sept. 18.—Robert Neal Rudmoss-Brown, head of the Department of Geography, University of Sheffield, in an article in the Manchester Guardian on "Icebergs in the Atlantic," says: "Icebergs are all of land origin, and represent the seaward ends of glaciers that have calved off through the buoyancy of the sea as the glacier has flowed outwards and downwards from its gathering ground on the high Arctic lands. An iceberg is built entirely of consolidated snow, but nevertheless that is amply sufficient to cut the steel plates of a ship."

"The icebergs of the North Atlantic are all derived from the western glaciers of Greenland, Melville Bay, where the great ice sheet meets the waters of Baffin Bay, and Disko Bay is notorious for its icebergs. The bergs drift with the current across the bay and southward along the coasts of Baffin Island and Labrador, eventually to be turned adrift in the North Atlantic to the east and southwest of Newfoundland. There they cross the shipping routes between Europe and northern North American ports. They first appear in February, become more numerous in March and April, and reach a maximum in May and June. In July they are less numerous, and as the summer goes on they become rare until in the darkest months of the year they are few in number."

"A record of bergs passing south along the coast of Newfoundland, and naturally it is incomplete, gives number varying from 100 to 1,000 in the course of a year, with an increase of 300 to 400. On the United States-European track there may be said to be four completely ice-free months, but on the Cape Race (Newfoundland)-Europe track there is none entirely free from ice. South of lat. 40 deg. N. bergs are rarely seen. The area where they congregate, break up, and melt lies east of the Grand Banks between lat. 48 deg. and 42 deg. N., and covers an area of some 74,000 square miles.

"The annual variation in the number of bergs and the date of their arrival has been attributed to many causes. This year again the lack of bergs has brought the question into prominence. Of course, as usual the influence of the Gulf Stream has been invoked, but there are other causes that may be equally or more potent in this respect. The passage of the bergs begins when summer conditions in the North not only allow calving to take place from the ends of the glaciers, but also liberate the bergs that have been imprisoned in the sea-ice during the winter. A prolonged winter season of firm sea-ice would prevent the usual generation of bergs. This is what normally happens in the far north of Greenland. Another possibility is involved in the suggestion that an unusually large number of bergs is stranded in shallow water off the coast of Labrador and so been checked in its passage south."

POWNAI

On Sunday evening, Rev. H. E. Campbell preached his farewell sermon to a congregation that filled every available seat in our little village church.

The pastor choose as his text the words found in Paul's Epistle to the Philippians, Ch. 1 verse 27, from which he delivered a helpful and inspiring message. Scripture was read by Rev. Sutherland MacLeod who has been called home on account of the passing of his father. Two solos, "Jesus Lover of My Soul" and "Abide With Me" were pleasingly rendered by Mrs. MacLeod, of Montreal.

On Monday evening a large number of the congregations of Pownall, Millview, and Mt. Herbert gathered at the Parsonage for the purpose of presenting Mr. and Mrs. Campbell with farewell gifts, and the following address:

Thus another link has been added to the golden chain of friendship making our lives brighter and courage greater and our faith stronger.

In closing the writer wishes Mr. and Mrs. Campbell and family, health, happiness and fruits for their labor in the little corner of God's vineyard at Stewiacke to which place their have been called.

Mrs. Arthur Moore on behalf of the members of W. M. S. read the following address to Mrs. Campbell:

Dear Sister: We the members of the Pownal United Church have met here this evening to say farewell to you, as we realize with a keen feeling of regret that we are about to lose you as a member of our Branch of the Woman's Missionary Society, but feel our loss is another's gain. Yet we shall always feel closely linked together as members of the missionary society of the United Church. Your sincere interest in our W. M. S. will stimulate

Dear Mr. and Mrs. Campbell, It is with feelings of deepest regret that we realize that your ministry among us has been concluded and that you are about to depart for another field.

During the past two years you have endeared yourself to each and all by your sterling qualities of mind and heart. We have profited by sitting under your instruction, we have been comforted by your visits in times of sickness and trouble, and our lives have been made richer by your gift of genial fellowship. Especially in our community League will your presence be missed. Under your leadership it has grown in membership and in service, and you ever sought to uplift our ideals and interest us in worth while things.

We feel however, that we should congratulate you in receiving a call to such a large and important congregation and assure you that we will follow your progress with much interest. We trust distance will not sever the golden chain of friendship but that you both will often come back and renew the "tie that binds." We ask you to accept this gift as a slight expression of our affection and appreciation and may God's rich blessings rest upon you and your family.

Signed on behalf of the congregation of Mount Herbert Church: Earnest Mutch, Earnest Lund and Harry Wood.

POWNAI

us to greater missionary interests. By your helpful ideas you have increased the interest of us all in this great work of the Church. We trust that this little remembrance will help to keep us in your memory.

Signed on behalf of the Pownal W. M. S.

The following address which was accompanied by a purse of money from the Pownal and Millview people was read by Mr. W. E. Smith. To Rev. Mr. and Mrs. H. E. Campbell:

Dear friends: It is with a feeling of deep regret that we assemble on this occasion to bid you farewell.

During the past two years you have endeared yourself to all of your congregation by your kind and feeling words and actions. We will miss you but we realize our loss will be others gain.

We are pleased, however, that your are to labor in a not too distant field and we will ever be interested to hear of your success in the future. Co-operation has ever been your watchword and the result of combined efforts has been manifest on every hand.

The great interest you have shown in the Community League and Young Peoples work has been much appreciated by all and we trust that your good work will bear fruit in the Master's vineyard.

We feel we would be missing an opportunity if we did not in some humble way acknowledge your many kindnesses to us, and it is for this reason we have gathered here this evening. We would ask you to accept this parting gift as a token of our love and appreciation for you both.

We wish you God's richest blessing in your new field of labor and now once again we bid you farewell. Singed on behalf of Pownal and Millview congregations.

Rev. and Mrs. H. E. Campbell:

MT. STEWART

Miss Edith Cameron, West Covehead, spent the week end at the home of her parents, Mr. and Mrs. Calvin Cameron, Head of Hillsborough.

Miss Sadie Farquharson, Bridge-town, spent the week end at the home of her parents, Mr. and Mrs. Frank Farquharson, Conovoy.

Mrs. Frank Pigot, Mr. Ralph Pigot, Miss Catherine and Miss Ellen Pigot, Savage Harbor, were visitors to Marshfield on Sunday.

Miss Ida Coffin, U. S. A. is at present spending some time at her home at Head of Hillsborough.

Miss Jennie Douglas, Charlottetown, spent the week end at her home in Mount Stewart.

Mr. and Mrs. Roland Jay, Faningsbrook, were visitors to Savage Harbor on Sunday.

Mr. George Leard has returned to Charlottetown after having spent a few days at his home in Souris.

Miss Martha Robertson of Kingsboro, spent Thursday in our town visiting friends.

Among the Charlottetown visitors to the Souris Exhibition, were Mr. and Mrs. James Paton and Mr. Rowland Paton.—G

Otter Pelt Valued At \$2,000

PETERS ROAD AND VICINITY

It would appear from information received that the potato crop of this year will be much lighter than that of last year. Considerable rot is prevalent and many of the tubers are undersized.

The Egg and Poultry Association of P. E. I. loaded a car of live poultry at Murray River, R. R. yesterday the 18th inst. There was a ready response from the farmers. Good prices are being paid for quality stock.

Mrs. L. Francis McFadyen who with her family is located in Quebec city is now visiting at the home of her parents, Mr. and Mrs. William Bulter, Peter Road. Mr. and Mrs. Bulter have been particularly indisposed for sometime, and will welcome the presence of Mrs. McFadyen in their home.

Mr. James Acorn after spending a considerable time at the home of his parents Mr. and Mrs. L. J. Acorn, Alliston, has again returned to New York where he holds a good position in restaurant work.

Mr. James Carver of the Steel Works, Trenton in company with Mr. Cunningham foreman of the steel plant at Trenton, N. S. recently motored to Peters Road, Alliston and other places on a holiday trip.—P

ANIMAL SIX FEET LONG, SHOT OFF VANCOUVER ISLAND, FIRST CAPTURED IN MANY YEARS

MONTREAL, Sept. 18.—Two centuries ago the countries of the north Pacific were famous for but one thing, the sea otter, and scores of lives and vast sums of money were spent in hunting this prize of the ancient fur trade. It was the deep sea otter that first spurred the tide of immigration from Russia eastward to the Behring Sea and the Alaskan waters, and for many years the sea otter was the richest article of commerce known to the early Spanish, British and other ocean adventurers before whales and seals became the chief objective of the north Pacific hunter.

Frenzied hunting, however, soon brought about depletion of the sea otters. By the time of Queen Victoria's jubilee a gift of four pelts to Her Majesty by a chief of the Haida Indians on the Queen Charlotte Islands was considered a great rarity. In recent years the sea otter has been considered virtually extinct.

But recently an Indian seal hunter off the west coast of Vancouver Island encountered a great, dun-colored sea animal, more than six feet long. The hair was of a remarkably silky texture. He shot it and showed it to an official of the game conservation board, who promptly confiscated the skin, announcing that it was that of a sea otter, the first to be killed in many years.

The pelt, valued at more than \$2,000, will be stuffed and mounted and placed in the provincial museum in Victoria.

COLLED BACTERIOLOGIST; ANSWER: PUNCH ON NOSE

MEXICO CITY, Sept. 18. (U.P.)—Antonio Uriel Sosa is a prisoner in Belen jail today because of his unfamiliarity with scientific terms.

At a street side stand where he had stopped to purchase a pineapple, Sosa examined the fruit so minutely that the vender asked him:

"Why don't you look at 'em through a microscope Senor Bacteriologist?"

"Nobody," replied Sosa, punching the pineapple man in the eye, "can call me a name like that and live."

Attendants at Juarez Hospital today said the street salesman, Lucas Gonzalez Trujillo, would live, while officials at Belen said Sosa had asked a guard to buy him a dictionary.

College Careers For 10 Newsies

BOSTON, Mass., Sept. 18.—The ten grittiest and most deserving Boston newsboys, to be chosen from that vast army of youths who sell or distribute the newspapers published in one of America's largest cities will be given scholarships, which will enable them to embark on a four year college course.

The high schools of this city have recommended 24 newsboys from 10 high schools to be considered for the valuable scholarships. The boys will be interviewed personally by the judges, under the direction of Dr. Alfred A. Burton, former dean of the Massachusetts Institute of Technology, and chairman of the Foundation Committee on scholar ships.

Since its inception this scholarship competition has met with outstanding success, and this is the fourth annual award of the scholarships.

SOVIET SEEKS BACKERS FOR CAMERA PLANT

MOSCOW, Sept. 18.—(U.P.)—Soviet citizens anxious to possess a camera have been asked to finance the construction of a factory to produce photographic apparatus by ordering and paying for a camera years in advance.

This is probably the only place in the world which customers are willing to pay for their purchases before the factory to produce them even has been started.

The advance payments, nominally \$100, for a simple camera, will be used to finance the erection of a plant. The first actual goods are expected in April, 1933.

Coachman For Lincoln Alive

(Unit'd Press)

RAVENNA, Mich., Sept. 18.—Serene and happy with memories of his services as coachman for former President Abraham Lincoln, William P. Brown, a 93 year old negro has lived with his aged wife in a modest cottage near here for over 25 years.

Brown, a Civil War veteran, is believed to be the last man living to have been in the employ of the Lincoln family.

To the hundreds of visitors from all sections of the country who seek out his cottage, Brown is always willing and happy to relate his experiences.

Born in 1838 at Lockport, Ill., Brown enlisted at the outbreak of the Civil War. He survived 13 battles with only one wound.

Brown paved the way for his later stewardship with the President when Lincoln passed through Bloomington during the war. Charles E. Boyer, a banker, jokingly bet Brown a new suit that he couldn't shake hands with the President. When Lincoln's coach drew up and, abreast of him, Brown ran up to it and extended his hand, which the President clasped cordially.

Child Prodigy Excites Wonder

LUNENBURG, N. S., Sept. 18.—A child Hercules who hauls a heavy wagon for a pastime excited the wonder of the inhabitants on this rugged country. On an island where hills and valleys meet the waters of the Lunenburg's splendid harbors, there has been discovered this boy of 10 and a half years who, by his marvellous feats, has won fame throughout his native country. He is a child of the Lunenburgs who sail the vessels of the Lunenburg fleet.

Born in January 25, 1921, only child of Mr. and Mrs. A. Heckman of Heckman's Mill, Harry St. Clair Heckman is a together unique specimen of a life, probably unparalleled in history of the Atlantic province. At the age of four and a half he weighs 100 pounds, and is 4 feet six inches in height, has waist line of 33 inches and has limbs and features of corresponding size.

The weight of this wonder of birth was ten pounds. On his first birthday he tipped the scales at 40 pounds and each year since a corresponding abnormal development.

Science Aiding Fish Industry

HALIFAX, Sept. 18.—While politicians discuss the relative advantages or disadvantages of trawlers in the fishing industry, the Atlantic province, and the possibility of introducing new methods of fish smoking and refrigeration into one of the key industries of the Maritimes, a few scientists at the Fisheries Experimental Station here perform quietly and without publicity experiments of great value to this important industry.

Much progress has been made by Dr. Leim and his associates in the preparation of cod liver oil freezing, as contrasted to the method of cooking. Experiments at the Station showed that much of the oil could be removed from the livers by freezing alone. The procedure was to freeze the livers, leave them in cold storage for a few days, and then run them through a meat chopper. The resulting had less color than that produced by cooking, and on examination the University of Toronto indicated that the vitamin content, unchanged from that of oil obtained in the usual way. It was found that more oil could be obtained from freezing alone than could be skinned from a cooked kettle. These results will speed the extraction of oil from the livers in plants which have cold storage but are not equipped for steam cooking.

Results were tabulated on drying of fish in cold storage, a method was developed which "freezing burn" which at the present time entails commercial loss could be remedied by freezing under a process which is new. "Jacketed" room, associated with automatic temperature control presents a method of preventing "freezing burn" without either salting or packaging the fish or other commodities in storage.

At Halifax, the drying in a room was compared with that in an ordinary room with visible results. It was found that thin plates of ice lost weight five times as rapidly in the ordinary room, which indicated that the application of principles had been almost perfect.

SEA HIDES HOARDS OF GOLD

LONDON, Sept. 18. (U.P.)—Many treasures lie hidden under the sea around the coast of the British Isles. Just off Cornwall there lies a Spanish galleon with \$17,000,000 in her safe; at Fiamborough Head, Yorkshire, the wreck of the Carina which carried gold to the value of \$15,000,000, and under the sea of Essex the wreck of a Dutch sloop which sank with \$500,000.

NEW SPEED in Electric Cooking

To the cleanliness and convenience of automatic electric cookery has now been added greater speed and greater efficiency. New top-burner heating elements give you the speed you need to prepare a quick meal. Just snap the switch and the burner is, at cooking temperature almost immediately.

Think of the convenience when you must prepare a hurry-up breakfast.

Our Harvest Festival offers you an unusual opportunity to own a Hotpoint electric range. Our generous terms allow you two full years to pay for it in small amounts monthly.

Maritime Electric Company Ltd.

"BOSSY" GILLIS TO CALL WEEKLY "THE ASBESTOS"

NEWBURYPORT, Mass., Sept. 18. (U.P.)—Mayor Andrew J. "Bossy" Gillis hopes to publish the first issue of his weekly newspaper early in October, and says he will call it "The Asbestos."

"It'll be full of plenty of hot stuff about any of those guys who think they can lick Bossy" Gillis said in explaining his selection of the name.

The paper will be primarily political, designed to re-elect "Bossy" over four or more other prospective mayoralty candidates.
