1/2 share in binder (Frost & Wood); 1 hay mower (McCormick); 1 gang plow; 1 hay rake; 1 set spring tooth harrows; 1 set spike harrows (new); 1 scuffler; 1 tiller; 1 seeder, broadcast (Massey-Harris); 1 box sleigh; 1 wood sleigh; 1 truck wagon; 1 driving wagon; 1 potato digger; 1 disc harrow; 1 set scales (Renfrew) 1000 lbs.; 1 cream separator (Renfrew); 1 churn; cream cans; 1 hay fork, blocks and rope; collars, hames, pad and breeching, traces; other articles too numerous to mention.

TERMS: All sums up to \$10.00 cash; over this amount, 7 months credit on approved joint notes. Beef cattle cash.

Sale positive as farm is sold.

JOHN C. MacPHEE, Auctioneer.

# THE EDUCATIONAL HORIZON

PRESENTING NEWS AND VIEWS OF INTEREST TO TEACHERS AND ALL OTHERS SEEKING IMPROVEMENT IN EDUCATION

## HOW TO PLAN A "WE HAVE SEEN" CHART

(I have just read a suggestion in The Grade Teacher for motivating original ideas in composition.)

1. "Ask your pupils to choose three unrelated words and put them into a story. The first words chosen in my room were—light, kitchen, airplane. I told the children that they might make up their own titles. The resulting stories were interesting and original and the children seemed to have a variety of ideas. Different pupils read their stories to the class.
2. Another idea was to select a phrase from any story and use it as a title of a composition. They might write what the phrase brought to their minds. These were to be true stories. Some of the phrases chosen were—"Shut Up in a Room", "Was in a Bad Humor", "Crawling Through the Grass."

"Packing a Lunch." There were many different associations.

1. Select a stout piece of paper or light cardboard for the foundation.
2. When possible, bring specimens of the things you see, for example, plants, stones, etc.
3. When specimens cannot be brought, hunt for pictures or make drawings to illustrate the things you see.
4. Be sure to keep an accurate record of dates and places.
5. Writing, printing, and all other work on the chart should be done as carefully and neatly as possible.
6. Watch for things, which you see record on your chart, everywhere you go out-of-doors—walks, to and from school, in your own yard, picnics. Often you find the most interesting things unexpectedly.
7. Make a chart for each month.

## IDEAS FOR WRITTEN COMPOSITIONS

In the spring and early summer try to see the first birds as they return day by day. 1. Try to see the first wild flowers. Keep a record but be very sure you actually see a bird or a flower before you mark its name on your chart. 2. Write down the date of finding a bird's nest, the first egg, the day the eggs hatch. Do not touch

the nest. Be careful not to frighten the parent birds. 3. Watch wild animals at their spring activities. Try to see the first calf, the first colt, the first baby squirrel, etc. 4. Choose a beauty spot; a corner in a park, a shady nook in the woods, the bank of a little pond or stream. Watch the changes that take place the spring months.

## GEOMETRY

Underline each correct response. \* is also the median. True or false.

1. An exterior angle of a triangle made by extending one of its sides is equal to the sum of the two adjacent interior angles. True or false.
2. If A is equal to B and X is equal to Y, then AX is equal to BY. True or false.
3. An arc of a circle has the same length as its chord. True or false.
4. Any side of a triangle is shorter than the sum of the other two sides. True or false.
5. A triangle has three medians. True or false.
6. The sum of the exterior angles of a polygon formed by extending each of its sides in succession equals six right angles. True or false.
7. Rhombuses are necessarily similar. True or false.
8. The altitude of any triangle

## EXERCISE IN GEOMETRY

Opposite each numbered word below are three words or phrases. Underline the word or phrase that is most closely related to the numbered word.

1. Triangle.—square, polygon, etc.
2. Theorem.—axiom, corollary, postulate.
3. Adjacent.—near equal, parallel.
4. Angle.—60 degree, solid, triangle.
5. Rectangle.—parallelogram, triangle, rhombus.
6. 90 degrees.—perpendicular, segment, supplement.
7. Vertex.—reflex, degree, point.
8. Hypotenuse.—right triangle, 180 degrees, circle.
9. 40 degrees.—obtuse, acute, straight.
10. Altitude.—hypotenuse, vertex, perpendicular.
11. Parallelogram.—quadrilateral, polygon, square.
12. Parallel.—oblique, equidistant, perpendicular.
13. Intersection.—point, angle, curve.
14. Congruent.—unequal, equal, straight.
15. Included.—between, equal, unequal.
16. Complementary.—90 degree, obtuse, axiomatic.
17. Equilateral.—perpendicular, vertex, equal.
18. Bisect.—one half degree, vertical.
19. Exterior.—greater, outside adjacent.
20. Obtuse.—130 degrees, 220 degrees, 90 degrees.
21. Scalene.—acute, obtuse, unequal.
22. Quadrilateral.—triangle, pentagon, trapezoid.
23. Supplementary.—acute, 180 degrees, axiomatic.
24. Triangles with two equal sides.—right isosceles, scalene.

## HOW DO PLANTS THAT ARE NOT GREEN GET FOOD?

Green plants sometimes help other plants by supplying them with food. Mushrooms, puffballs, and other fungi use other plants for food. These plants that are not green cannot change water and carbon dioxide into sugar and starch. They do not have the green chlorophyll that makes the chemical change take place. So they have to use food that green plants have made. Bread mold is a fungus. It has no chlorophyll. The bread mold sends little threads down into the bread. These threads are not roots. The

threads soak up the food in the bread. This food was made by green wheat plants that grew in the soil, the air, and the sunshine. The food was stored in the seeds, or wheat grains. The grains were made into flour, and then the flour was made into bread. Mold will also grow on damp leather, meat, jelly, or almost any kind of food. Mold will even grow on live green plants and take in food that the plants are making. If you have seen puffballs and other mushrooms growing in the soil, you know they are not green. They are growing up out of the soil, but they are not taking minerals from the soil and carbon dioxide from the air. They are just soaking in food from the bodies of plants and animals that have died and fallen to the ground. These bodies have decayed and become mixed with the soil. The sugar, fat, and proteins that were in them went into the soil. Mushrooms and other green plants that are not green just take in these foods that have already been made by green plants. Fungi grow in fields and forests where there are plenty of plants and animals to die and become mixed with the soil.

## FORT DUQUESNE

Fort Duquesne was in the Ohio Valley and is now the city of Pittsburgh. It was founded by the French in 1754. It was attacked by General Braddock in 1755 but he suffered severe defeat. It was finally captured by a gallant Scottish officer, John Forbes, in 1758. (To Be Continued Monday)

## Ellen's Diary

By an Island Farmer's Wife

(Continued from Page 2)

ferns, and in the slim new grasses appearing along the way. A gentle breeze rustled in the over-hanging branches and from the top of the rise there richly scented with the fragrances of an awakening earth, one turned instinctively to see away beyond the intermingling fields and trees the spire of the old Kirk etched against the evening sky.

Through and over line fences; along fields where one admires the pattern of the Fall furrows; walking the meadows where clovers are greening; past hedgerows of maple and cherry, of spruces and silvery birch where bewitching tunes were being sung and then turning into the lane that leads from his "back forty", I was presently at Rob's. Jamie has been miserable today, with an ear condition that "just ached and ached" a result perhaps of the common cold that has been general in many of the farmhouses of late. His day has been spent on the kitchen couch dozing when relieved of one pain and waking to lie quietly and rather listlessly there. Jamie is and always has been a good patient accepting any medicine or application patiently and when he is ill a strange calm seems to come over him which to Carolyn and the rest of us is almost ominous. He is better now. When we came away sleep was weighing his eyelids, a sleep that one felt is going to be restful and refreshing.

Saturday's work at Alderlea as always took care of many an end of concerns: last pieces of the week's mending—new sleeves, in part, to James' smock; a zipper to replace the moody one on my jacket; heels of socks darned and many another duty done for the Sabbath to come. Busy and kindly this day given to us at all dis-appointing or marred in any way, ours has been the fault. Fresh and unsullied it came to us at dawn, inlaid with the glory of the sunrise and threaded with the delights of joyous birdsong. And now

"The day is done. With trembling hands I give Into Thy keeping, Lord, the precious thing That Thou at early morning didst

bestow. Upon me. I still see Thy gracious smile As Thou didst bid me use its hours aright— Those of the dawn bedewed and those that bore The heat of noontide sun. Now Lord at eve, I come with but the part of what I hoped To have to offer Thee—How have Oh tell me, Lord, Thou knowest that I tried, Then to my heart, God's voice in answer came— My child, did faith companion thee today?"

Until Monday — Diary — Good-night.
