HEALTH by Dr. G. H. Mackenzie

FATIGUE

Although there are many contributing factors to inefficiency, there is none more potent than the failure of individuals to live within the boundaries of natural laws. This is particularly true as regards failure to secure adequate rest.

The human body stands only a certain amount of abuse. It says "Thus far you may go, but no further." Unless rest is obtained and the products of fatigue got rid of, there is danger ahead. There is a limited reserve beyond which it is injurious to go if trouble is to be avoided. This margin of safety varies with each individual. It is well-known that what one person can accomplish with ease is apt to cause physical discomfort in another. One individual is able to carry on with but little rest or sleep for a period without obvious ill effect on either appearance or efficiency, while another so deprived shows the characteristic drawn and tired look, and approaches the days' work mentally dulled and physically fatigued.

Apart from the lowering of the accepted standards of efficiency, it is also well-established that many injuries and accidents are directly attributable to fatigue. In former days, when industries were less carefully supervised and the industrial worker lacked the guidance of the plant physician, it was noteworthy that the majority of accidents occurred at a time of day when fatigue was at a minimum. A brief rest from a monotonous task and the removal of conditions which contributed to fatigue resulted in a marked reduction in the number of accidents.

Accidents due to fatigue are, however, not confined to the workshop or factory. The tired motorist not only jeopardizes his own life but also the lives of other motorists and those of the people on the road.

With increase in years, the capacity for physical activity is lessened. This is Nature's reminder that, with age, we tire more readily as a result of physical effort. The hill that once was climbed with ease is now approached with difficulty and the ascent causes shortness of breath. Over-fatigue should naturally lead to an investigation into its causes.

A periodic health examination will determine what is normal for age and what the beginning of disease.

Questions concerning Health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered personally by letter.

"WHITE" AND "BLACK" ALKALI

While the amount of alkali present is undoubtedly a factor gravely affecting the productiveness of a soil and the possibility of its profitable reclamation, the nature of the alkali is a matter of still greater importance, says the Dominion Chemist. Two classes of alkali are generally recognized, "white" and "black". They are so called from the appearance of their respective incrustations and differ as regards their poisonous action on vegetable life and also as to their response to simple remedial measures.

White alkali consists chiefly of the sulphate and chloride of sodium (Glauber's salt and common salt), but may also contain notable quantities of chloride and sulphate of magnesium (bitter and Epsom salts). White alkali is, therefore, a general term and is used to designate any or all of the aforementioned salts. It is commonly a mixture of several of them.

Black alkali is characterized by the presence of sodium carbonate (washing soda, sal soda), though this compound is almost always associated with one or more of the chlorides and sulphates mentioned in white alkali. Sodium carbonate is, as is well known, white, but from the fact that it acts upon and dissolves the decayed vegetable matter (humus) of the soil, the incrustation is tinged dark brown or black—hence the name. Water standing in pools in soils impregnated with the carbonate is invariably of a darker colour and much resembles a strong infusion of coffee. The nature and reclamation of alkali soils is dealt with in a publication which may be obtained from the Dominion Department of Agriculture (Publications Branch) free of charge.

They were training her in her duties as maid. On answering the phone the first day she brought no message but explained "Twarn't nobody, jes a man says, 'Tis a long distance from New York' and says, 'Yessir, it certainly is.'"

PUREBRED LIVESTOCK

For the month of July, the total number of pedigree certificates registered by the Canadian National Records and approved by the Dominion Minister of Agriculture, was 4,414 as against 4,206 for the month of June, and 4,701 in the corresponding July of last year.

The July registrations included 346 horses; 2,241 cattle; 677 sheep; 544 swine; foxes 10; dogs 574; poultry 11 and goats 21. Of the horses 14 were Belgian draft; 69 Clydesdale; 3 French Canadian; 2 Hackney; 227 Percheron; 14 Standard-bred; 17 Thoroughbred. The cattle comprised 122 Aberdeen Angus; 688 Ayrshire; 7 Brown Swiss; 117 French Canadian; 93 Guernsey; 241 Hereford; 384 Jersey; 40 Red Post and 551 Shorthorn. Of the sheep 27 were Cheviot; 22 Cotswold; 13 Dorset Horn; 60 Hampshire; 41 Leicester; 23 Lincoln; 109 Oxford Down; 1 Rambouillet; 74 Shropshire; 240 Southdown, and 67 Suffolk. Swine were represented by 46 Berkshire; 23 Chester White; 1 Duroc Jersey; 2 Hampshire; 13 Poland China; 59 Tamworth; and 400 Yorkshire. Dogs and foxes were of all breeds, while the 21 goats included 13 Saanen; 1 Nubian and 7 Toggenburg. The total registrations approved this year to date (July) is 37,749.—Registration Division, Dominion Live Stock Branch.

IN MEMORIAM

GEORGE C. MCKEEMAN

On Wednesday, July 5th, there passed away at his home in Gasperaux after an illness of more than a year, Geo. C. McKeeman. Deceased was stricken with a paralytic stroke on June 16 of last year and despite all possible loving care and medical attention, he failed to rally. During his illness, which was borne with christian fortitude and resignation, he was frequently visited by his pastor, Rev. Wm. McCabe of Sturgeon.

Mr. McKeeman was a son of the late Jessie Charles and Daniel McKeeman and was born at Murray Harbor North in 1873. During his early manhood he was employed in his father's lobster canning establishment and upon his father's death assumed management of this enterprise until 1917 when he moved with his family to Gasperaux where he has been located until his death.

He leaves to mourn their loss, his widow (nee Maria Jamieson), four sons and four daughters: Daniel, of Boston, Mass.; Lester, George and John at home; Mrs. Jerome Hughes, St. Mary's Road; Olive of Charlottetown, and Etta and Jessie at home; also the following brothers: John, Fort William, Ont.; Samuel, North Randolph, Mass.; Donald, Pictou, N. S., and Ivan of Summerside. A large number of mass cards, letters and telegrams of sympathy were received from friends and relatives on the Island and abroad.

His funeral took place on Friday morning, July 6th, at St. Paul's Church, Sturgeon, where a Mass of Requiem was sung by Rev. Father McCabe.

A large concourse of people followed the remains to the church and cemetery. Following were the pall bearers: Pius Jamieson, John Hicken, Earle Llewellyn, James Steele, George White and James McNulty.

May his soul rest in peace.

South Australia

RESEARCH AMONG ABORIGINES

Every year sees fresh advances in anthropological work in South Australia, and gradually a comprehensive body of knowledge is being accumulated relating to the Australian aborigine, who, because of his low degree of cultural attainment, belong to one of the most interesting races of the world from the anthropological point of view. For several years expeditions from the University of Adelaide and the South Australian Museum, aided by grants from a Rockefeller Foundation, have visited the interior, where the natives can be studied in their natural habitat, and spent several weeks in research work. Plans are being made for this year's party, which will be led by the Director of the Museum (Mr. Hale). It will include doctors, mental specialists, physiologists, zoologists and ethnologists, and will make its headquarters in the Musgrave Ranges, several hundred miles west of Oodnadatta, and close to the border of Western Australia and South Australia. Several weeks ago Dr. C. Hockett, anthropologist,

and Mr. N. B. Tindale, B.Sc., ethnologist at the Museum, left for the interior to establish a base camp, and to carry out preliminary work before the arrival of the main party, which will travel by rail as far as Oodnadatta, and thence by motor lorry

Exhibition Week Brings You An Amazing Show of The New Coats

We Upheld QUALITY While We Held Down PRICE

RAW FURS have risen greatly since we bought these new coats. Coat cloths have also risen. We are not prophets but here's our guess; it will be a long, long day before you find furs and fabrics as good as these at prices so low.

The styles are sponsored by Paris: wide rever collars, that make you look cheery, the 2 way boa collar that tucks round your neck, the new wide-at-the-top sleeve, and the new deep cuff.

THE ACHIEVEMENTS OF A YOUNG AUSTRALIAN PROFESSOR

Next year South Australia will lose one of the most brilliant members of the professorial staff at the Adelaide University, for Professor W. K. Hancock, who has occupied the chair in modern history for the last six years, has accepted an appointment at Birmingham University. Still in his early thirties, Professor Hancock has already made his mark abroad and his critical analysis of Australia and Australians in his recently published book, "Australia," is said to have been one of the steps leading to his Birmingham appointment. A Rhodes scholar from Victoria, a fellow of All Souls College, Oxford and the youngest professor in the British Empire at the time of his appointment to the Adelaide University, Professor Hancock seems destined for a career unusually rich in achievement. His passing to other spheres of work recalls other noteworthy figures who have been associated with South Australia either by birth or long residence. Among them are Sir William Bragg and his son, Professor Bragg, winners of the Nobel Prize for their work in crystals and X-rays. Sir Douglas Mawson; Sir Hubert Wilkins, Sir Horace Lamb, one of the Empire's most famous engineers, and Mr. Alan Rowe, celebrated archaeologist.

WOOL GOING UP The general range of prices at the June wool sales in Adelaide was

SOWING THE SEED With a continuance of the alternating shower and sunshine which characterized March, conditions for seeding are excellent over a great part of the wheat belt, and farmers are taking advantage of the weather to put the drills in their paddocks. So eager was one young farmer near Quorn, in the northern wheat areas, that he worked from 8.30 a. m. till midnight on the last two days of his seeding. On the first night he had two hurricane lanterns on the front of the tractor which drew his 20 hp drill, but for the last night he was aided by the moonlight.

THE WORKLESS MAN'S GOOD FORTUNE Fortune has smiled on an Adelaide unemployed man in the last fortnight. Digging a hole to plant a tree near the Mt. Crawford camp for unemployed men in the Mt. Lofty Ranges, he unearthed a nugget of quartz and gold worth \$60. A few days later, when prospecting near the same spot he uncovered another worth \$100. A large area near by has been pegged, and, while there is nothing to justify a rush, others hope to follow in the footsteps of the lucky finder. Similar rich pockets have been found on several occasions in the Mt. Lofty Ranges, but, tantalizingly, they have proved to be of small extent.

Smith Junior: Father, I'm going to marry and settle down. S. Senior: Humph! You'd better remain single, and settle up.

R. O. P. Breeding

The international fame of Canadian Record of Performance and Registered poultry can be justly attributed to the establishment of high-producing lines of healthy vigorous birds under the supervision of the Dominion and Provincial Departments of Agriculture. Consequently, the 1933-34 rules and regulations for R. O. P. poultry which have just been issued by the Live Stock Commissioner assume an import of more than ordinary significance. Although no changes have been made from the previous year, the opportunity is once more given to the individual to learn more about poultry breeding, to build up his own flock, and to benefit through the sale of breeding stock and hatching eggs. Attention is called to the fact that application for entry for R. O. P. certificates, which should be addressed to the Poultry Division, Live Stock Branch, Dominion Department of Agriculture, Ottawa, must be received one month in advance of the date on which it is intended to commence the records, and that no entries will be accepted after November 30. R. O. P. certificates may be granted for all birds, not otherwise disqualified, which lay 200 eggs in 365 consecutive days, provided that at least half the number of eggs laid during official inspections weigh two ounces or over, starting one month after each bird's record commences, and in no case later than January 1.

FORTY-THREE PER CENT INCREASE IN EXPORTS TO UNITED STATES

Reported industrial recoveries in the United States appear to have influenced Canadian exports to that country. The July export, valued at \$17,343,000 was the high-

est since December, 1931. It was \$12,481,000 in July, 1932, so that the increase is 43 per cent. Exports to the United States reached their lowest point in April when the total was \$8,382,000. This was followed by \$13,857,000 in May and \$14,847,000 in June. The increase in the export of electric energy was from \$166,000 to \$226,000, but the gains were along almost the whole line of Canada's exports. The largest were in wood, woodpulp, shingles, planks and boards, nickel, asbestos, raw hides, grains, fish, furs, raw wool, and acids.

REVELSTOKE MANOR HOUSE BURNED TO GROUND The fine old Revelstoke Manor House, situated about five miles west of Port Hope, Ont., has been burned to the ground. It was built about 60 years ago by the late Albert N. Ball. The old fashioned Victorian parlor contained part of the drawing room furniture used by the Hon. Sidney Smith at Hamilton House when the Prince of Wales visited Canada in 1860.
