Signed **M. MCKINNON**,  
**A. P. PROWSE**,  
**A. F. BRUCE**,  
**G. S. INMAN**.

#### Valuable Property For Sale

The system of musketry training as carried on at Valcartier Camp this year is on a very thorough basis and provides a course of instruction that meets the greatly varying degree of experience found in the thousands of men undergoing training there.

Each regiment has several officers that have lately taken a course at the Dominion Musketry School, Ottawa, and a recruit's musketry training begins almost as soon as he reaches camp. Under direction of these instructors he is taught how to handle his rifle properly and carefully. One of the first principles is that the man's rifle is his best friend, in fact really part of him—being his greatest power of either offence, or defence. He is taught the parts of the rifle and their uses, how to operate the mechanism, load and fire. The use of the sights and their adjustment is then taught, also the different firing positions.

The work is carried on in a systematic, progressive manner every day for some weeks, until the man becomes familiar with his weapon and thoroughly conversant with its parts. He is now ready to start through the musketry school, where the theory of rifle fire, the forces acting on the bullet in its course through the air and how these different things all enlarge or lessen the effective dangerous area of his fire to an enemy on different kinds of ground and under different conditions.

He is then shown the correct alignment of sights by resting the rifle on a tripod and sand bag, and aiming at a bull's eye. The rifle is then moved and the recruit has to set it himself to the satisfaction of the instructor. When he has secured a correct aim he is tested on the "triangle of error" system, which ensures that he takes a consistent aim, the same as the instructor. From there he goes to the index practice rods, which are a very ingenious device giving excellent practice in correct positions, aim, trigger pressure and steadiness. When the points have been mastered the recruit is thoroughly tested on the submachine gun machine.

This machine shows the instructor at once just how true a man shoots, and if there is any trouble just where it is. This machine is a wonderful piece of mechanism; on it is mounted a regular Ross rifle in such a way as to have perfect freedom of action in any direction; this rifle is aimed at a target some sixty feet away, but the shot is registered on a small target about two inches by one and one half inches square placed in the machine. Across the face of this target travels a sharp pointer and every slightest movement made by the rifle is exactly recorded by this pointer, and when the trigger is pressed a sharp pointer perforates a small hole in the card exactly where the bullet would have struck the target aimed at by the man. When a man has satisfactorily passed this test he is given a card allowing him to fire the first practice at the rifle ranges.

This range at Valcartier is the largest of any in the world. It is equipped this year with 900 targets, ideally located along the base of a mountain with a wonderful plain stretching four miles to shoot from.

The first range practice fired is what is known as a grouping practice and is fired at 100 yards. In this the man fires five shots with as nearly the same aim as possible, the object being to place them as close together in the target as possible. If they go in a ring four inches in diameter it counts twenty-five, eight inches in diameter, twenty, and twelve inches in diameter fifteen. The score of fifteen is the lowest that will pass and the man has two chances. If he fails on the second he must return to school for further instruction and when passed from there can again try the grouping, continuing in the school work until he can "group."

The second practice is application firing also, at 100 yards. Application fire means that each shot is signalled and a mark put on the target so that any error may be corrected, the object being to strike the bull's eye. Each man must make eighteen points out of a possible twenty-eight or return to the musketry school for instruction until he can. In this way every man gets a good, firm grounding in the work, and is given as much personal instruction as his individual case requires.

I am Sir, etc.  
**P. MCKENZIE**,  
Kings County.

### CAPTAIN A. R. BRENNAN CHIEF INSTRUCTOR

#### Political Meetings in the Murray Harbor District

In an excellent illustrated article the Montreal Star publishes a most interesting sketch, showing how Chief Instructor, Capt. A. R. Brennan, makes the finest soldiers in the world from new recruits.

Capt. Brennan has entire charge of all musketry instruction at Valcartier, and his extensive and complete knowledge of every military device, and his mastery of every detail of all the modern methods and every style of ordnance, render him particularly fitted for this most important work.

The success of an army depends so entirely upon the training of the soldiers in the proper and skillful use of the implements of war, that the selection of an instructor of ability is imperative and absolutely necessary for success in a conflict with highly trained soldiers like the Germans. The selection of Capt. Brennan for this important work shows the determination of the military authorities to render to the Empire the best that Canada can produce in the way of training.

Our volunteers have the courage and strength that only needs the skillful training of Capt. Brennan to fit them for deeds of dash and daring such as have made the Canadian soldier praised and admired the world over by all who approve of brave and noble deeds.

In the following most interesting and instructive article, published by the Montreal Star, Capt. Brennan shows how every trick of modern war is taught our volunteers:

From this stage the work carries on into longer ranges and varied targets, also rapid firing and snap shooting. A very interesting target is one of the lower half of which is brown, to represent a wooded background, and in the centre a khaki figure representing a man's head. The target is used both for application firing and for rapid fire practice. In this practice the man has forty seconds from the time the target appears until it goes down to fire five shots, and it shows well for future work the number of times the khaki figure gets hit.

The most realistic practice of all is on the snap shooting range. Here a khaki figure, representing the head and shoulders of a man in the firing position, is raised for five seconds and then disappears. In this time the firer has to aim and fire his rifle, and there are times when the hits run from 75 to 80 per cent. These targets are used at different ranges and form a very interesting and realistic practice.

Major Laliberte, machine gun Officer of the 41st Regiment, is senior officer of the brigaded guns of the 7th Infantry Brigade, and together with Lieut. R. B. Campbell, of the 55th Regiment, and Lieut. J. Roy, of the 57th has a very efficient body of men under his command.

The musketry staff at Valcartier this year are as follows:—  
The chief musketry instructor is Capt. A. R. Brennan, of the 36th P. E. I. Light Horse, who has been in musketry work for some seven years.  
The assistant instructors are: T. H.

By **CAPT. A. R. BRENNAN**.

The system of musketry training as carried on at Valcartier Camp this year is on a very thorough basis and provides a course of instruction that meets the greatly varying degree of experience found in the thousands of men undergoing training there.

Each regiment has several officers that have lately taken a course at the Dominion Musketry School, Ottawa, and a recruit's musketry training begins almost as soon as he reaches camp.
