

SUM'SIDE AND WEST

The Latest News From Prince County.

Mrs. W. T. Bowness, Bedeque, has recovered from her recent illness.

Mr. and Mrs. John Hall Lee of Tryon are visiting their friends in Bedeque.

Mr. Richard Wright Bedeque, has returned to Charlottetown to resume his studies.

Mrs. Jessie Schurman, Bedeque, is able to be out again after her attack of inflammatory rheumatism.

Mrs. Louise Bremner, Charlottetown, returned home yesterday morning after a few days visit to friends in Summerside.

We are pleased to learn that the Dunk River Dairying Co., have employed Jesse Schurman as their cheese and butter maker for next year.

We were pleased to have a visit from Mr. Rogers Farquharson of Lot 43, who came up to Bedeque the latter part of last week and will return to-day.

An entertainment and basket social will be held in the North Bedeque Hall on Wednesday evening next. The proceeds will go towards repairs to the Hall.

W. A. LEARD of Bedeque, is preparing for another big season in the lobster business as he is building a new boat and a large number of new traps for the summer's work.

We regret to learn that Mr. A. E. Wright, of Central Bedeque is confined to his home with a slight attack of pneumonia. We hope to soon see him out again in his usual health.

CALL at the Ladies Furnishing Store and see the largest assortment white goods they have yet shown. Corset covers from 20c up to 75c. Nickers 20c to \$1.00. Skirts 90c to \$3.00. Night dresses 75c to \$2.00.

The assignee's sales of assets of estates of A. M. Wright, Colin Wright and Wright Schurman & Co., will take place at Central Bedeque on March 19th at 2 p. m. and at Summerside on the 21st at 2 p. m.

The senior and intermediate teams of the Crystal Hockey Club were entertained at a supper in the Queen Hotel on Wednesday evening, at which there were about 40 in all present. The dining room was prettily decorated with Red White and Blue and other trimmings. Mayor McNeill presided and called off a lengthy toast list, to which the boys heartily responded.

The committee appointed at the last meeting of the Town Council to get the cost of truckage and other use of the horses for the Town during the past year have found the amount to have been \$421.81. If the Town owned two horses the estimated cost of maintenance and other expenses in connection therewith would amount to a small sum in excess of this. There are of course many advantages to be considered in the Town having its own horses which would no doubt warrant a trifling increase in expenditure. These horses could always be counted on to be ready when required and in this way a good deal of time would be saved in running after and depending upon truckmen. In handling the fire engine horses well trained such as the Town would have would give better satisfaction than under the present system. The matter will be discussed at the next meeting of the Town Council.

Benefit Derived From Using Milburn's Pills For Nervousness.

Locust Hill, Ont., Sept. 28th, 1906.

The T. Milburn Co., Limited, Toronto, Ont.

Dear Sirs,—I wish to let you know of the benefit I have derived by using your Pills.

I am a widow with a family to support, and have to work hard, which is very trying on my nerves.

At night I was unable to sleep for hours after going to bed, and it seemed as if every nerve in my body was on the go.

I had a smothering, choking sensation, and had to spring out of bed to catch my breath.

Milburn's Heart and Nerve Pills have done me so much good that I can recommend them highly to any person afflicted with heart and nerve troubles like I was.

Yours, with gratitude,
Mrs. Wm. HARPER.

DAIRY ASSO. MEETING.

(Continued from Fifth page.)

per day. For the maintenance of the cow a still larger quantity is necessary; and even apart from the amount directly required protein seems to exercise a beneficial effect on the secretion of milk.

Many of the foods produced on the farm such as timothy hay, straw, corn and roots, are comparatively deficient in nitrogenous nutrients but contain a large amount of carbohydrates, or heat and fat producers. It is plain therefore that a profitable ration cannot be made up from these alone. Complementary foods are clover hay, oats, peas and bran. Being rich in nitrogenous substances they are especially adapted for feeding in conjunction with the aforementioned.

Another quality which the feeder should consider when making up a ration for dairy cows is succulence. Normal milk contains a large percentage of water, hence watery foods should be supplied to secure the greatest production. This argument is abundantly verified in practice. No better food for the production of milk can be found than June grass, which contains between seventy and eighty per cent. of water. During the summer season the dairy man experiences little difficulty in providing a succulent ration for his herd. By means of the pasture grasses supplemented by other green forage a continuous supply of the best milk-producing food may be maintained. In winter succulent rations are not so easily obtained. With stockmen in our own Province roots have been almost the sole dependence for this purpose. Corn ensilage has been tried and in many cases pronounced a failure. Nevertheless a few farmers may be found who are still clinging to the silo. No doubt the varieties of corn grown and the methods of cultivation and handling have had much to do with determining success or failure, and it will be admitted that the climatic conditions here are not very favorable. As corn is an excellent and cheap food for the dairy cow, it is desired that some variety may yet be found which can be grown successfully in this Province. Very good results may be obtained when roots are fed in conjunction with hay and other fodders, but the cost of the product is generally greater than in cases where ensilage is used. An acre of well matured corn furnishes about twice as much dry matter as an acre of roots and the values of the dry materials are about equal, pound for pound. Corn then is evidently a cheaper feed than roots. It seems probable however, that roots will always prove to be a profitable food for winter feeding with us since root crops flourish here to an extent scarcely surpassed in any climate.

Having thus briefly outlined the most important principles underlying the science of feeding we shall next attempt to apply these principles to actual practice. In summer the fresh green pastures are the main dependence in supplying food for the dairy herd. These furnish food rich in protein, juicy and palatable. But past experience has shown that pastures may fail. In this event the prudent dairyman will have provided a plentiful supply of green forage with which to supplement the dry and withered pasture grasses. No crop excels peas and oats for this purpose.

At the police court to-morrow morning the case against Stanislaus Gallant will come up for hearing. Two C. T. A. summonses are returnable and judgment will be given in the case of the Town vs. Thomas E. Ramsay.

It would seem that the people of Summerside must accept just what the Marine and Railway authorities in Charlottetown feel disposed to give them in the way of incoming and outgoing mails whether they be pleased with it or not. After an almost continuous struggle for better arrangements in the mail service there appears to be no advance made and our citizens must wait for their mails for hours and sometimes days after each storm, just as if they were of no importance whatever. The regular train which left Charlottetown Tuesday morning only arrived near Emerald same evening and continued battling with the snow during the night, and all day yesterday while another train which left Summerside Tuesday morning kept up the fight at this end until Wednesday afternoon when she was taken to assist the train snowbound at the western part of the province. While it was known that the train could not arrive at Summerside on Tuesday evening, it would have been an easy matter to have the mails brought here by train from Bradshaw to Hunter River—just as easily as did some of the passengers drive from the latter place a riving here at an early hour in the evening. And when the train which was working from this way was within less than two miles of the train from Charlottetown at the time the former was taken west, the mails could have been transferred without any trouble. But we were without a mail for two whole days. It is said by those who were present that more men could and should have been employed in clearing the track and considerable time saved.

HUMORS

Come to the surface in the spring as in no other season. It's a pity they don't run themselves all of that way; but in spite of plagues and other eruptions, they mostly remain in the system. That's bad. Hood's Sarsaparilla removes them and cures all the painful and disgusting troubles they cause. Nothing else cleanses the system and clears the complexion like Hood's.

FOR SALE—Second-hand Benches suitable for schools or halls. Apply at St. Joseph's Convent after 3 o'clock. 121d.

Such a mixture furnishes fodder which is similar to fresh grass in protein content and other desirable qualities. Almost all dairymen have already adopted this system of summer feeding. Many however, do not provide enough green forage for their stock, consequently there is often a large falling off in the milk supply quite early in the season occasioning loss to all concerned. This trouble can be remedied in part by the growing and feeding of more green forage. In the fall corn fodder may be fed with advantage. The crop should be allowed to mature well before cutting and in feeding should be supplemented by some more highly nitrogenous food, such as clover, hay and bran or oats. A few pounds of roots may also be fed with profit. In winter the make up of the ration will depend largely on the feed at hand. Clover hay in any case is a valuable food for dairy cows. Where ensilage is not available from thirty to forty pounds of roots, preferably mangles or carrots, will be required by each cow daily. From five to ten pounds of concentrates which may be a mixture of peas, oats, barley and bran, can be added with advantage. For cows which are not milking the feed may be coarser in character. And the grain ration may be withdrawn. Do not expect the dairy cow to subsist upon straw, however, as she is sure to fall off in flesh and get into poor condition for beginning next season's work when forced to depend too much on that food.

There is an art in feeding which can only be acquired by experience. Feeding cannot be reduced to the preciseness of a mathematical equation. Given a perfectly compounded ration, no one can tell exactly what the results will be when it is fed to different animals. But with the knowledge which science affords to guide him, modified it may be to suit his own conditions, the feeder is enabled to take a great stride toward more economical production.

E. J. McMillan, New Haven.

An interesting discussion followed Mr. McMillan's paper.

Wm. J. Simpson of Hamilton said that in 18 years he had not been able to bring corn to the glazing stage. He then complimented Mr. McMillan upon his paper and moved a vote of thank.

Mr. A. E. Dewar said that he had been using a silo for many years and found it successful. He would advise a farmer to first find out whether he can grow corn and afterwards erect a silo. He had grown corn for 23 years, during which only four years were poor seasons.

Mr. T. J. Dillon said he thought that the experience of the farmers of this province is such that the growing of corn can be successfully carried on. He thought that a great deal depended on the soil.

Mr. Chas. Gardiner thought that the selection of breeds is an important point in the production of milk. He was strongly in favor of the English Shorthorn. He believed in the Shorthorn from the ground up, both for milk and feeding purposes.

Mr. Lauchlin McDonald of East Point, complimented Mr. McMillan upon his excellent paper and seconded Mr. Simpson's motion which upon a vote being taken was carried unanimously and tendered to Mr. McMillan by the President.

The work of the Inspector was then dwelt upon at length.

Mr. Coffin of Mt. Stewart found fault with Mr. Morrow's work.

Mr. J. C. Underhay said he was opposed to the appointment of an instructor before the appointment was made but he believed Mr. Morrow's work during the past year was productive of good.

Mr. Hunter of Alberton criticized Mr. Morrow's work.

Mr. Dewar thought that Mr. Morrow's appointment was a benefit. The patrons wanted to be educated as well as the cheese maker.

Mr. Joseph Wise, Milton, moved seconded by Mr. McLeod of Dundas that the services of the Inspector be retained for another year.

Mr. John Anderson thought the present arrangement of instructing was defective. He contended the expert should be available when necessary and the cheese maker should pay for his services. The Inspector should drop in upon the people at their homes.

Mr. Jenkins said it was no use saying that Mr. Morrow had not done good. Adulteration of cheese is going on throughout Canada and the same thing will be in Prince Edward Island if due precaution is not exercised.

Mr. T. J. Dillon said by all means have a man continue to inspect and instruct. Have the instructor visit the factory and with the directors examine the vats and milk cans. After all the quality of the cheese produced in P. E. I. is higher than any other part of Canada. Last year however New Brunswick went to the front and obtained a preference in the British market.

Those who are engaged in the dairying industry as a rule are the most heavily taxed. He would advise the Association to get all possible from the Government. He hoped to see the quality of the cheese of P. E. I. Island maintained at any price and the Inspector retained.

Mr. Coffin moved an amendment that the Inspector be not retained. The patrons should be instructed.

Mr. Arthur Dickieson of New Glasgow spoke in favor of Mr. Morrow's work. He thought the directors should always meet with the Inspector and then the defects would be learned by the board of directors. He thought it a mistake to discontinue the work of the Inspector.

Mr. McLeod of Dundas said that Mr. Morrow's services were of great benefit to the Dundas Factory.

Mr. J. M. Aitken, of Montague, said that Mr. Morrow had regularly visited the factory at Montague. He thought that it would be a great mistake to discontinue his services.

Mr. M. L. said that he would certainly support Mr. Wise's motion.

Mr. Edmunds, New Perth, said that the

instructions of the patrons of the different factories should be looked into. He thought the Inspector should visit the people and inspect their stables.

Mr. Thompson, Marshfield, approved of the retaining of Inspector. He thought that an instructor should be installed in connection with Prince of Wales College.

The discussion was then continued by Mr. Jenkins of Vernon River, William Patrick, Hampton, Joseph Wise, Milton, J. Burgess, Hazelbrook, Lorne Gibson of Marshfield.

The amendment made by Mr. Coffin being withdrawn the motion made by Mr. Wise to retain Mr. Morrow's services as an Inspector carried unanimously.

Mr. Aitken moved, seconded by Chas. Ways that the assessment of the factories for the salary of the Inspector be left with the new board of directors the sum not to exceed \$1000.

Mr. Lauchlin McDonald of East Point thought that the Inspector's salary should not be reduced. He regretted that there is a tendency to reduce the salaries of cheese makers. The association then appointed Mr. R. E. Mutch as an auditor.

It was ordered that two bulletins, one in the spring regarding the care of milk and one in mid-summer regarding feed be issued.

The leaving of whey in the cans was discussed at length.

Mr. Dillon thought it a very important point and the whey should certainly be removed by noon every day. The law should be rigidly enforced.

Upon motion of Mr. Lauchlin McDonald of Lakeville, seconded by Mr. Dickieson of New Glasgow it was resolved that the Provincial Government be asked to continue the grant of \$400 toward the Inspector's salary. Messrs. Lauchlin McDonald, Robert Sutherland and Mr. Dewar were appointed a committee to wait upon the Government. The different reports of the day were then formally adopted.

The committee on printing reports recommended that all be included in annual report, including Mr. McMillan's paper.

The meeting closed by the singing of the National Anthem.

SPECIALIST BEATEN

The Case of a Montreal Gentleman, to whom the Greatest Physicians Could not Bring Health, Cured by Dodd's Kidney Pills.

MONTREAL, Que. Mar. 11.—At 1398 St. Denis Street, this city, lives Mr. C. Clapier. He has been very ill with kidney trouble. He was treated by leading physicians and specialist, one from New York City. All failed to cure me. At last, I could not turn from one side to the other. "I read a paper of Dodd's Kidney Pills. The first box helped me, and I kept on. Now my kidneys don't trouble me at all.

WHAT MAUD GONNE SAYS

Miss Maud Gonne endorses the Donnybrook Fair in the House of Commons. "The Irish must fight," she says. It seems so.

A CLEAR SKIN and BRIGHT EYE usually indicates health which is obtained by using Wheeler's Botanic Bitters, a genuine system regulator and Blood Purifier cures Biliousness, Headache, Constipation, Sour Stomach, Bad Breath, Pimples, Blisters and Loss of Appetite. Only 25 cents at dealers.

THE MAN WITH A MILLION.

"Do you subscribe to the assertion that a man with a million dollars can do whatever he chooses?"

"No," answered Senator Sorghum, "I do not. These days a man with a million dollars wants to lie low and keep out of trouble or the first thing he knows two or three men with a billion apiece will take his money away from him."

When horses have Fever the hair and hoofs are dry and the legs frequently swell. Give GRANGER CONDITION POWDERS a genuine Condition Powder. If fed occasionally during the winter and spring will keep your horses and cattle in health, see that you get the Granger.

A Food, A Reconstructor, A Specific.

Three great remedies are combined in Par's Perfect Emulsion. The purest Cod Liver Oil (Emulsified) which is the most effective food for Consumptive, Anæmic, Fever Convalescent and those with broken down systems. The purest Hypophosphites of Lime and Soda, which are the most effective reconstructors of wasted tissues. Gualacol which the foremost medical authorities the world over are administering with wonderful success in consumption.

Par's Perfect Emulsion

The only preparation containing all three of these remedies. Its results far exceed all others. It reconstructs wasted tissues, aids digestion, stimulates the appetite, enhances assimilation and brings new vigor into the whole body. One gains flesh and spirits from the first dose. Try it and see. You will be grateful for the advice.
