

Shrinking Estates

WISELY men have made wills—but too often unimproved private executors have been unable to prevent shrinkage of the Estate. Under the continuity of Eastern Trust Company, all assets are subject to periodical analysis with regard to ever changing conditions and conservation of principal.

Oil Minded

Canadians are getting oil minded. They appreciate that the Turner Valley high test gasoline producing field of Alberta is the British Empire's richest petroleum asset. They know that somewhere in Alberta a tremendous crude oil field will be discovered.

News From The Mines, our house journal, has led the way among reputable brokerage house journals in placing before the public potentialities of Turner Valley and the possibilities of oil production in other fields. This paper also features mining developments from coast to coast and international grain market activities.

Write to-day for a sample copy of News From The Mines. Your name will be added to our permanent free mailing list upon further request.

In Constant Touch with your investments

One reason why investors rely so fully upon the Eastern Securities Company is due to the realization that our services do not terminate with the sale of a security, but continue for all time.

They derive much comfort from the knowledge that their purchases are reviewed frequently with a view of discovering the development of a possible weakness, as well as a profitable re-arrangement of their holdings.

HON. J. P. MCINTYRE

Minister of Public Works for the Province of P. E. I. and a Director of the Canadian Good Roads Association, who has been successful in having the association meet at Charlottetown, P. E. I., in annual convention, Sept. 17, 18 and 19.

The Whaling Industry

OTTAWA, Aug. 30.—While as early as the seventeenth century whaling was carried on in the Gulf of the St. Lawrence by fishermen from France, little or no operations have been carried on in Canadian Atlantic waters for some years. With rare exceptions the only whales of any commercial value now frequenting the Canadian North Atlantic are the common Rorqual, or Blackfish, and the Beluga or White Whale, which is found in considerable abundance in the St. Lawrence district. No distinct fishery, however, has been established for the capture of these two varieties, although it is probable that steps may be taken to encourage the destruction of the Beluga, as they are becoming a heavy menace to the salmon fishery of Quebec.

The industry is at present carried on only from British Columbia, where the Consolidated Whaling Corporation, Ltd., Victoria, has two establishments, one at Rose Harbour, on the south coast of Queen Charlotte Island, and the other at Naden Harbour, on the north coast of the same islands.

The catching of whales is conducted from specially constructed vessels—usually steamships. At the front of the vessels is a gun, somewhat like a small cannon, which is fixed on a platform which can readily be turned around. Instead of a shot a harpoon is placed in the gun to which a large rope is attached. The harpoon has spring wings on it, which are tied down. It is also equipped with a small explosive bomb. On the mast of the ship a barrel-like arrangement is placed, in which a "lookout" man stands when whales are being searched for. When he sees a whale blowing the vessel is moved ahead of the direction in which the whale is going so as to get near to it as speedily as possible. The whale is followed to within shooting distance, when a trained gunner fires the gun and if the shot is successful the harpoon strikes the whale when the bomb bursts, which usually kills it and the wrapping on the wings is pulled off so that the wings spring open, which prevents the harpoon from being pulled out, even if the whale is not killed at once. When the whale is dead, if

BRITISH GUIANA LEADER IS NATIVE OF ONTARIO

Brig.-Gen. Sir Frederick Guggisberg is now governor and commander-in-chief of the largest of the British Caribbean possessions, British Guiana. Sir Frederick was born in Toronto in 1869 and moved to Galt, Ont. with his family a few years before he went to England to be educated.

After graduating from the Royal Military Academy at Woolwich he entered the Indian army as an engineer. Later he became surveyor-general for Nigeria and did important surveying work in tropical Africa. In 1912 he was made a governor-general of the Gold Coast and earned his knighthood by his work in opening up the cocoa industry there.

Another high official of British Guiana, Hon. Sidney Dash, is also a Canadian. He was educated at McGill University and is now director of agriculture for the colony of British Guiana.

Mr. Dash is interested in the Canadian wheat pool, as a similar system is being considered to handle the rice crop in Guiana.

NEWFOUNDLAND TRAP FISHERY A FAILURE

ST. JOHN'S Nfld., Aug. 28.—Except for a few localities, the shore trap fishery in Newfoundland up to the beginning of August has been a failure. From Grate's Cove to Cape Race, on the eastern coast, a poor catch is reported both for traps and hook and line. In fact, from the Fogo district south the fishery has been the worst in years, with hook and line men in Bonaville, Trinity and Conception Bays getting very little for their labor. From Cape Race west, all along the southern shore, with the exception of a few localities in St. Mary's Bay, the catch has been the lightest in forty years.

From Fogo north, and on the Newfoundland Labrador return has been better, a fair catch having been taken at Twillingate and a good catch with traps and hook and line is reported on the Labrador coast since early in July. The Straits and Canadian Labrador, however, turned out a failure.

The prospects are that the fishing during the latter part of August will be somewhat better, and that the shortage may be retrieved to some extent. There seems to be little doubt, however, that dried shore codfish will be a scarce article, and that the price will accordingly be higher than usual. The eight dollar per quintal limit set by the Board of Trade is not likely to stand.

Boys' And Girls' Wear

—Bigger And Better Than Ever—

With the opening of a new season we find our stock of

was never so complete as it is at the present moment

For school opening September 3rd, buy your outfit here and save money.

For The Girls

Navy Serge Middies and Skirts, each	3.95
Cotton Dresses, nicely made in good quality, each	.98
Girls' Jersey Dresses, each	4.95
Gymnasium Bloomers, each	2.50
Girls' Pullover Sweaters, large assortment of prices and colors	
Girls' Tams, each	.75
Girls' Felt Hats, each	1.75
Girls' Art Silk Hose, pair	.55

For The Boys

Boys' Blouses	.50 to 1.50
Boys' Caps,	.50 to 1.65
Boys' Hose	.25 to 1.50
Boys' Shirts, 1.00 1.25 and 1.50	
Boys' Sweaters, pullover and coat styles,	.98 to 4.00
Boys' Braces	.25 to .35
Boys' Ties	.45 to 75
Boys' Blue Pants (short)	.80
Boys' Assorted Tweed Bloomers	1.50
Boys' Corduroy Bloomers	2.00 & 2.25
Boys' Juvenile Suits	1.75 to 4.50
Boys' Tweed Suits, (straight pants) (6 to 9 years)	5.00
A large assortment of Boys' Suits in Tweeds and Worsteds,	5.00 to 10.00

S. A. McDonald

there is still time for hunting, the common practice is to place a perforated nozzle of an air pipe into the whale and pump air into the body until the whale readily floats. The puncture is then tightly filled and the whale is marked with a flag, and the vessel goes on hunting until all the time comes when it should go back to the whale factory, which it does with as many whales as it may capture during the day.

All parts of whales are now converted into commercial products. The lean meat of the whale in appearance much resembles beefsteak and is quite palatable, when properly cooked, and during the war there was a considerable demand for it as a food. It was then canned. There has since, however, been very little demand for whale meat for human food.

On reaching the factory the whale is drawn up on a slip when it is cut into strips, which are drawn into the factory where these strips are cut into small pieces and are then subjected to heat to extract from

them the oil, while the solid product, after being thoroughly cooked, has all the oil pressed out of it and is then ground into a fine meal which commands a large market for food for poultry, hogs and cattle. It is a very nutritious food. The oil is collected into casks or tanks and is used for various purposes. The bones are ground into meal for fertilizing purposes.

The four chief varieties of whales captured are: The Sulphur Bottom Whale, which is the largest of all living creatures, its maximum length reaching 90 feet. The Sperm Whale or Cachalot, the largest member of the toothed whale, the males reaching a length of 60 or 65 feet. The females are much smaller. From the blubber which envelopes the body the sperm oil of commerce is prepared. The oil from the fatty tissue contained in a large hollow on the upper surface of the skull, spermaceti is produced. It is from this whale that the valuable ambergris so highly prized for perfumery purposes is secured. About 80 sperm whales are captured annually. The Fin Whale is smaller in size than either of the above named. It is the most numerous, about 140 being captured each year. The Humpback Whale reaches a length of about 50 feet. Each adult whale produces some 70 barrels of oil. In addition to these four whales a smaller number of Sei whales are captured, and an occasional Right and Bottlenose whale.

The Rose Harbour establishment operates four steel steamers employing eleven men each. The Naden Harbour plant operates two steamers. All these steamers are of the same size and type.

The total number of whales captured during 1928 was 305, and produced 571,914 gallons of oil, valued at \$8,260,592; 754 tons fertilizers valued at \$45,240 and 376 tons of bone and meat valued at \$12,784.

Since the opening of the season in the latter part of May of the present year over 200 whales have been captured, the greater number being taken by the steamers operating from the Rose Harbour establishment.

OLD STUFF!

We don't sell gold brick. Our gasoline won't tighten or adjust the tappets and our oil won't oval cylinders round again.

But you can bet your last thin dime that "MONITOR" GASOLINE and "MAJESTIC" MOTOR OIL will speed up your car and slow down depreciation.

No mystery involved. We invoke on witchcraft and brew on hokum.

But "MONITOR" Gasoline is refined to shove instead of pound, and to burn to the last atom from a cold start. And from that same cold start, "MAJESTIC" Motor Oils are not too thick to lubricate, nor at the end of a hard day on the road do they grow too thin to hold the tough seal between rings and cylinder walls or to spread the film of protection wherever metal touches metal.

Refresh your motor at any "MONITOR" Station. The smoothest motors have the "MONITOR" and "MAJESTIC" habit. They say so in sweet silence.
