SANDRA THE JEALOUS

By Jane Phelps

SELF CONDEMNATION

For once I couldn't sleep because of my own failure to do what was right. Always it had been the other way round; always some one else had been to blame for my discomfort, my unhappy thoughts.

I'm glad I hadn't time to look for another nurse. "I muttered. "And I'm awfully sorry I forgot our anniversary. It was lovely in Everett to plan all that for me. Perhaps he cares more for me than I have thought? Surely he must care a little to go to so much trouble and expense to give me pleasure. My pearls are wonderful. I am so glad he didn't give me sapphires. I wonder if he is beginning to understand I dislike them because Leola always wore them?' and so for hours my thoughts ran on.

"Stay in bed, dear," Everett said when he rose. "It was awfully late when you went to bed, and I have an idea you didn't sleep well. I heard you tossing several times."

"How did you come to expect a woman to sleep the night she first owns such wonderful pearls? I do hope no one steals them," for the first time thoughts of that long-time past robbery of my sapphires coming to me.

"We will take care they are put where a burglar won't find them. One experience of that kind is enough. Now go to sleep." He darkened the room, and kissed me good-bye.

Tears filled my eyes. He had been so kind, had done so much for me the day before: his voice had been so gentle as he bade me go to sleep that I could only weep because of the ache it made in my heart. I SO wanted him to take me in his arms and make a great big fuss over me this once, if he never did again. Of course I was glad he was kinder, that he treated me with more consideration, but sometimes I used to think I would rather he would beat me if he only showed me some of the passionate love he had given Leola.

Men really are stupid where women are concerned. I have learned that Everett was but a sample of all men in that respect. A few words of love, a real kiss, — instead of the peck on the cheek most men give after a short period of married life—a little cuddling and fussing over, will make even the strongest-minded New Woman, a man's devoted slave. How much more will it make a young, domestically inclined woman love him; the woman to whom he and her home are all

So I wept scalding tears even though I had received kindness and beautiful pearls.

Miss Pierce came in about eleven o'clock with Junior. She put my beautiful boy on the bed beside me, and while I played hilariously with him, I thanked her for the interest she had taken in the surprise planned for me.

"I was so glad to be of use, "she replied, "No one could help being happy, Mr. Graham was so like a boy planning to surprise you. He was afraid you would suspect. I think you never will realize how pleased we all were when you went driving. It gave us a chance to decorate and do all there was to do without being fearful you would find out what was going on. I think it would have broken Mr. Graham's heart if you had."

"It was all lovely," I said as Hetty brought me a tray with a tempting breakfast. "Wasn't it Hetty?" I asked.

"Indeed it was, ma'am." Then timidly:" Would you let me see your pearls? Mrs. Gray says they are so lovely.

"Of course you may see them. They are in the dressing table drawer. The key is in the usual place."

"Oh——" the long drawn sigh of delight made Marta Pierce and me both laugh.

"Bring them here, Hetty. I'll wear them while I eat my breakfast. I want to get used to them.

She clasped them around my neck They fell down over my nightdress and both girls gasped with delight. Hetty handed me a mirror to look at myself, and I joined them in expressions of enthusiastic admiration of their beauty. They were servants, but for a time we were just three girls together, laughing and chatting until Junior, feeling he had been neglected long enough, clutched the edge of my tray and spilled my coffee. It had become cold while we admired the pearls, so no damage was done.

Tomorrow—Peace for a Time.

SCIENTIFIC BODIES KEENLY INTERESTED

NEW YORK, Nov. 18.—Scientific bodies in New York are interested today in a strange monster reported to have emerged from a trackless swampy region in the Belgian Congo. The monster is said to have charged a village scattering natives and tearing down huts. A railway construction workman who observed the monster through binoculars, said:

"It was about twenty-four feet in length, with a long pointed snout, adorned with tusks like horns, and a short horn above the nostrils. The front feet were like those of a horse and the hind hoofs were cloven.There was a scaly lump on the shoulders."

The animal is believed to be a survival of a species numerous in prehistoric times.

Farm Prduce Wanted

We are open to buy dairy butter, fresh eggs, turkey, geese and ducks, also a couple cars of Calico potatoes. Write or wire, quoting prices if you have anything in the above lines to sell.

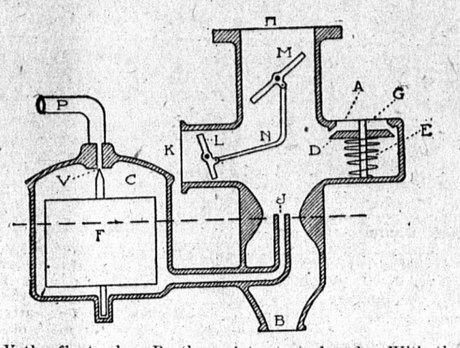
HINTS FOR The Motorist

BY ALBERT L. CLOUGH

HOW THE CARBURETOR WORKS
II

The rudimentary form of carburetor explained in the last illustrated article cannot give practical results because it furnishes a mixture altogether too rich in gasoline, at high engine speeds, if it is set to deliver a properly proportioned one at low speeds. This is because the rate of flow of gasoline through the spray nozzle, under the influenze of suction increases much faster than the rate of flow of air through the air-inlet, when acted upon by the same suction. The above diagram represents, in a simple form, two methods for securing "compression," that is, for overcoming the inherent tendency toward overrichness of the mixture at high speeds and for attaining an approximately uniformly proportioned mixture, irrespective of the rate of demand. Here, C. is the float-chamber,



F the float, V the float-valve, P the gasoline supply-pipe,J the spraying nozzle, H the mixture outlet to the engine, M the throttle (partly opened) and B the air-intake. At A is represented another entrance for air, known as the auxiliary air-inlet which can be entirely closed by the valve D that slides on the guide G, under the closing action of the spring E. This principle of compensation consists in countreacting the effect of the excess of fuel supplied at J. as the engine speeds up, by permitting just enough additional air to enter through A to make a perfect mixture with the excess of gasoline. The action is as follows: When the engine is running slowly on a nearly closed throttle, enough air enters at B to insure a proper mixture and the suction within the carburetor is to slight to open auxiliary air valve D against spring E. As the engine speeds up under the increasing vacuum within the carburetor increases, and the outside air pushing against valve D forces it to open slightly permitting air to enter through A to counteract the tendency toward overrichness. Progressive increase in throttle opening engine speed and the degree of vacuum without limit in the carburetor produces progressively increasing unseating of valve D. enlargment of the effective area at A and the admission of auxiliary air at a greater rate. Spring E is adjustable and by stiffening it the rate of admission of auxiliary air is decreased and vice versa thus providing a means of enriching or thinning the mixture. In some carburetors, two springs are used to seat the valve D one a very delicate one which controls D as it first unseats and another relatively stiff one which comes into action only after D has opened considerably. The former is adjusted to regulate the mixture quality at low speeds and the latter at high speeds. Another method of compressing for the inherent tendency toward overrichness at high speeds is the mechanically-operated auxiliary air-valve, shown at L. This value controls the auxiliary air-inlet K and is connected with the throttle M by the linkage N, so that as the throttle is opened the butterfly-valve L also opens with the result that the higher the engine speed and the greater the tendency toward overrichness, the more air can enter through K to thin the mixture formed to its correct proportions. The linkage N is adjustable so that the rate of opening of L can be increased or decreased in reation to that of the throttle-valve and a leaner or richer mixture produced. With the throttle almost closed, L is also closed, so that all air enters through the fixed or "primary" air inlet B. Sometimes, the two methods of compensation just described are combined in the same construction, resulting in a carburetor the same in principle as the one here illustrated. One of the carburetors most largely used is of this type and the claim is made that an especially good mixture results from the meeting of the air currents from three different directions, viz., from B A and K. In practice the gasoline spray-nozzle J is usually not a simple open tube as here shown, but has means for adjusting the area of the spraying hole ordinarily consisting of a conical needle-valve somewhat similar to V which can be screwed more or less fully into its seat. By the use of this the rate of supply of gasoline can be regulated.

Questions of general interest to motorists will be answered in this column, space permitting. If an immediate answer is desired, enclose self-addressed, stamped envelope. Addressed Albert L. Clough, cre of this office.

THE RURAL COURIER'S GRIEVANCES

Sir,—I notice a letter in last Monday's Patriot from our learned friend the Post Office Inspector, that exception must be taken to in different ways for it would seem by the essence of his contentions that the Post Master General and every succeeding one could cut our heads off if we signed a paper to that effect. Such is not the case. His Honour's powers are limited as well as my learned friends's and mine. We must first find out what limits his powers in this case and that is, the law that governs contracts. For instance, an impossible contract is not legal in this country if the Post Master, General or the King has it signed, and since a contradictory contract is always impossible we wonder how the Inspector reconciles what he says with the following cause or section of the contract at the bottom of page 3:

"And it is furthered agreed and understood that should the said contractor at any time fail to provide for the conveyance of the said mails and mail matter the Postmaster General may at the proper costs and charge of the said contractor hire sufficient means for the conveyance of the said mails and mail matter and the expense thus incurred shall be deducted from the compensation hereinafter stipulated to be paid quarterly to the said contractor.

Mail, costs and charge, hire, deducted quarterly, makes this so strong that it is absurb to say the bondsman are liable should we fail. We would much rather if our learned friend would discuss our condition or the way he could help us. If he would, and a few more, there would be no strike I can assure you, but since self preservation is the first law of nature we will have our case heard if it is in the court. How he found out there was only a few members belonging to the Union I do not know for the by-laws prohibit one from telling on the other and a member would be foolish to tell on himself for it would be an invitation to have a scab ready if they couldn't frighten our bonds men to scab our job.

We are not I. W. W.'s or radicals. We notified the authorities the 16 of last June and, for my learned friend's information that seems to look down on any thing started here, there is an Association of Rural Mail Couriers of Ontario, and the secretary's name is Donald Carmichel, Brayside, Ont., if he wants to write to him. They are affiliated with other unions and act slower than we do but they are with us.

I am Sir etc.
AUSTIN McINNIS, Secretary.

Silencers for Tables and Chairs—Can be made by cutting pieces of old felt the size of a quarter, and glueing them to the bottom of table and chair legs. These save the wear and tear upon oilcloth more than anything else.

Tree Uses for Turpentine:

FAREWELL GATHERING

A large number of friends and neighbors gathered at the home of Mr. and Mrs. Josiah Corney, Appin Road on Monday evening, November 17th to bid them farewell ere their departure for Victoria, where they purpose making their future home. The evening was pleasantly spent in music, games and social intercourse. Mr. J. W. Smith was appointed chairman and the house being called to order, Mr. William Gillespie read an address to Mr. and Mrs. Corney, suitable gifts were presented by Mr. S. A. Locke and Mrs. John Gordon. The recipients made fitting replies thanking the doners for their kindness in remembering them and also for the beautiful gifts, which would always be a pleasant reminders of their good friends on Appin Road. Refreshments were served by the ladies. After singing "Blest Be the Tie That Binds" and good-byes were exchanged, the party dispersed for their homes, feeling that they had spent a very pleasant evening.

Following is the address:

Dear Friends:—We your friends and neighbours, having learned that you are about to leave our circles to make your home elsewhere, have met with you this evening, to bid you farewell ere your departure; and also to express our regret that we are to lose you as neighbours.

We would now convey to you our appreciation of your sterling worth as members of this community for upwards of thirty years. We have always found you willing to help in all good causes social and religious.

Your places will be vacant and though other members may be added your absence will be keenly felt.

To both of you we extend our very best wishes for future prosperity and our hope is that your last days may be your best ones.

Please accept those small gifts as tokens of our good fellowship toward you.

We trust you may be spared for many years to do the master's bidding and that he will abundantly bless you.

We are your friends and neighbors of Appin Road.

MISSING NO CHANCES

Aboard Ship
or on Shoreleave you will find that
MORSE'S SELECTED ORANGE PEKOE is the TEA preferred by NAVY MEN on this station.

TO FOX BREEDERS

I am about to receive a quantity of the famous Boneless Horse Meat packed by LeSage and Co., of Montreal, P. Q. The quality of this meat is excellent. All horses being examined by a duly authorized veterinary surgeon before meat is packed which comes in boxes of 100 pounds net, no charge on boxes.

There is a great difference in the quality of horse meat and the proof that Lesage's is the best lies in the fact that it is being used by the majority of large ranchers in this vicinity. Now is time to order season's supply. Price and full particulars on application to P. A. FARQUHARSON, Prowse Block, Charlottetown. Phones, Office 655, House 752.
