Starch Diamond Is Latest Scientific Find

By HOWARD W. BLAKESLEE
Associated Press Science Editor
DENVER, June 24—(AP)—A real 1-30th carat diamond made from gum arabic, the starch of the tropical arabic plant, a new source which makes bigger diamonds than the sugar with which science had experimented since 1879, was shown to the American Association for the Advancement of Science today.

The stone is as big as one of the chip diamonds that stud wedding rings. It is one of 25 "starch" diamonds made recently

IN BED FOR WEEKS WITH BACKACHE

Quick Relief With Kruschen
It was advice from her mother that led this woman to take Kruschen Salts for her backache; and before she had finished the first bottle she was feeling better. This is the letter she writes:—
"About this time last year I had severe pains in my back and was prostrate for three weeks. I could not even rise in bed. I tried several well-known remedies but to no avail. Then I wrote to my mother telling her of my trouble. She wrote to me by return of post urging me to try Kruschen Salts. I immediately bought a bottle and can truthfully say before I had taken the fifth dose I could sit up. I kept on taking them and in less than two weeks I was about again. I am never without Kruschen now."
—(Mrs.) A. G.

Unless the kidneys function properly, certain acid wastes, instead of being expelled are allowed to pollute the blood-stream and produce troublesome symptoms: Backache, rheumatism, and excessive fatigue. Kruschen Salts is an excellent diuretic or kidney exponent valuable in assisting the kidneys to excrete acid impurities.

by Dr. Willard J. Hershey, of McPherson College, McPherson, Kas. Dr. Hershey has been making diamonds 12 years and produced 25 little "sugar" diamonds before switching to starch. His purpose is to discover how nature makes them and to get big ones.

He said today he now believes it will be possible to make larger diamonds. His switch from sugar to starch answers one part of the diamond puzzle.

It is the carbon in either sugar or starch which turns into diamonds. But the starch of the gum arabic plant has more atoms of carbon per molecule than the sugar. This makes it look as if the amount of carbon available is a factor in size of diamonds.

The large starch diamond was made by dissolving the carbon in the starch in molten iron, its contents heated to 5,400 to 7,400 degrees Fahrenheit by an electric current of 120 volts and 65 amperes. The hot iron was chilled with brine, breaking it open, sometimes as many as six starch diamonds were found, and sometimes none.

Fly-casting Record Set

CHESTER, N.S., June 23—Using a 5% oz. rod Kenneth Knapp, a 17 year old Norwalk, Conn., youth, established what is believed to be a fly-casting record when he cast a distance of 134 feet at a contest staged at the Owl's Head Rod and

Gun Club here. Knapp won the New Jersey State championship last fall and was sent to Chester to represent the Norwalk Rod and Gun Club. His average for the three best casts was 129 ft., 6 ins. In accurate casting he made 96 out of a possible 100. This, according to the Fish and Game Department of the Canadian National Railways, is also by way of being a record performance.
