

# Notre Dame High Tea

Come on the 7th and 8th to the Convent Hall for "Tea".

Bring your friends with you the two evenings.

Make a note of the High Tea at Notre Dame—Do not forget it.

Help to repair the roof of the building, the stalling of which is fast disappearing. According to experts' calculations, alone will cause an outlay approximately one thousand dollars. The work will be done by contractors.

Influence others to contribute to the good work for the comfort of the Sisters and pupils who occupy this venerable institution.

More than the usual number of yachts and attractions at all the customary booths.

Children's hour from 3.30 to 5.30. Those who take "Tea" or who are accompanied by their parents expected. 11559-161.

## IN MEMORIAM

**JOHN H. ROSS.**

The community of Belfast was saddened to hear of the death of John Ross on Saturday the 27th inst. Although the late Mr. Ross had known for two years that there was no hope for his recovery, he bore his long and painful illness with wonderful patience and resignation, and would always have a kind and helpful word for everyone. He will be sadly missed and mourned by his immediate family, and also a wide circle of friends and acquaintances who will long remember his bright and cheerful disposition. The funeral services were conducted by the Rev. J. W. McKenzie who visited him frequently, and faithfully during his illness, and the very large attendance was a testimonial to the esteem in which the deceased was held by the entire community. He leaves to mourn besides his sorrowing widow, four brothers, Messrs. Donald, Hector and Alexander all of F. A. River, and two sisters, Sarah C. also of F. A. River and Mrs. William Finlayson of California. Deceased was laid to rest in Belfast cemetery, beside the church which he always attended.

The pall bearers were: W. A. Ross, J. A. Macdonald, Charles Patton, J. R. Ross, Finlay Macdonald and D. Ross.

## TREE-REPAIRING.

Many tree-owners do not realize the importance of regularly inspecting their trees. Immediate attention to new injuries, or to any defects that may appear in repair work already done, will reduce materially the time, labor and cost that will be required to make these repairs later. Too often the owner believes that having paid the repair bills, his tree cares are over for all time. Unfortunately, this is seldom the case, for tree repairs are something like dental repairs. In both, frequent inspection and prompt attention will do much to prevent extensive repairs and large bills.

Tree-Repairing, Bulklin No. 73, Forestry Branch, Ottawa.

Health lies in our trees, and it would be a policy of literal madness to neglect them. We owe it as a duty to posterity to do everything that lies within our power to see that the process of development is unimpeded by any lack of care.

Doctor: "Well, I hope you profited by my advice."  
Patient: "Yes, doctor; but not so much as you did."

**RELIEVES COLDS AT ONCE**

Rexall Laxative Cold Tablets with Aspirin. For the relief of Colds and the headache and feverish conditions attending them, they are the most effective. The Aspirin cures the headache and depressed feeling at once and combined with the other properties contained makes a permanent cure of the cold after several doses. They are only 25c per box. Be sure and ask for

- AT HOME—Mrs. A. Lorne Farquharson** will be at home on Friday, February 2nd, from 4 to 6 o'clock at the residence of Mrs. J. A. Farquharson, 96 Hillsboro St.
- LAID TO REST—The** funeral of the late Mrs. Wm. McKie was held yesterday afternoon at 2.30 from the residence of Mr. H. H. Horne, Elm Ave., service at the house being conducted by Rev. W. O. Mulligan. The pall bearers were Messrs. John McInnis, L.C. Worthington, John K. McKenzie, Jonathan West, R.H. Rogers and Dr. Boufford.
- MOUNT STEWART METHODIST MISSION—There** will be preaching service on Sunday next, Feb. 4th at Black River at 11 a. m., Dunstaffnage at 3 p. m. Union service at Mount Stewart in the Methodist Church at 7 p. m. On Monday Feb 5th at Church Road at 7 p. m. On Tuesday at Marie at 7 p. m. The pastor hopes to spend several days of week, commencing Feb 4th making pastoral calls at Marie.
- RECEIVES PAINFUL INJURIES** Wednesday evening the three year old daughter of Mrs. Barrett was badly scalded at her home by the upsetting of a stove, the boiling water covering the child's face and body. She was immediately rushed to the City Hospital where she is reported to have had a comfortable night, and hopes are entertained for her recovery.
- LITERARY SOCIETY ADDRESSES.** "Robert Browning" was the subject of a very interesting and instructive address at a well attended meeting of the St. James Literary Society last night. The speaker was Mr. R. H. Rogers, M.A., Superintendent of Education. After briefly outlining the great poet's early life, his romantic marriage with Elizabeth Barrett, their happy residence in Italy, and Browning's later life in England, the speaker took up some outstanding poems and dwelt upon the genius for the analysis of thought and character which they evidenced. The monologues form in which the later poems of Browning are cast and are peculiarly adapted to do this in the same time to retain the illusion of reality. The poems chiefly referred to were, "Pippa Passes," "My Last Duchess" and "The Ring and the Book," the latter being considered by many critics the greatest poetical work of the 19th century. At the conclusion of the address a discussion was taken up by Mr. W. L. Cotton, Professor Bell, Judge Stewart, Dr. Ross, Mrs. J. E. B. McCread, Mrs. Henry Smith and Mrs. J. A. Macdonald. It seemed the opinion of the gentlemen who spoke that Browning's philosophical and intellectual qualities made him a writer more than worthy of appreciation as he is read and studied. Rev. Mr. Mulligan, who presided at the close of the meeting in the absence of the president, Mr. D. E. Shaw, announced that next Thursday night a paper would be read by Mrs. Henry Smith on "George Eliot."

## CARD OF THANKS

Mrs. John H. Ross of Pinette, wishes to thank kindly all neighbors and friends for their help and sympathy during the long illness and at the death of her late husband.

## MOTHS.

There are three types of destructive moths against which we must wage war if we value our household goods. These are the Furniture Moth, the Clothes Moth, and the Tapestry Moth.

The young of the Furniture Moth get into mattresses, chairs, carpets, etc., by means of a tunnel, which they very lightly line with their own web of silk. Paraffin smeared along the edge of the carpet or upholstery of chairs is a preventive. They are extremely difficult to detect, and have often accomplished much damage before their presence is known. This is often the one who is most determined not to afford you an opportunity, writes Major A. H. E. Mosse, of the Indian Army, who has proceeded to explain his points as follows:

The Clothes Moth has greyish yellow wings with faint brown markings. This moth lays its eggs in clothes, being specially found of fur and woollen garments. When exposed to a strong light, they develop power of this moth's eggs are destroyed, so that it is quite a good plan, during the winter months, to leave all furs, shawls and woollens and such things lying about in the sunniest part of the room instead of shutting them up in drawers and cupboards. In this way the eggs will be destroyed before they are due to hatch in the early part of the year.

The Tapestry Moth is the largest of these destructive moths, and is especially delicate in laying its eggs on things. Sunlight has no effect upon its eggs, so it is wise to use pepper, camphor, or naphtha, as a preventative, for in this case "prevention is far better than cure." An occasional beating of the furs, etc., is another excellent way of fighting our enemy the moth.

## Reliable Rubber Goods

Most pains and aches yield readily to the application of heat and in no other way can you get continuous and even heat so conveniently as with a good hot water bottle. It relieves toothache, earache, neuralgia, rheumatism, etc., and it is the best thing in the world to keep your feet warm these cold nights. We guarantee all our Hot Water Bottles.

# COOKING HELPS AUSTRALIAN NICKNAMES

Hard boiling water isn't any hotter than gently boiling water. As soon as soup and vegetables come to a boil turn the burner partly off, just sufficient to keep the food boiling and it will cook as quickly as if it were boiling hard.

Save your paper bags and slip them over your jars of fruit, write the name of the fruit on the bag. Twist the top of the bag tight. The fruit will keep better, and the jars will be free from dust.

When opening a glass of jelly you may find mould on top. Instead of taking it off with a spoon, dampen a clean cloth and wash it off. You will have no wasted jelly.

Teapots made of metal, if no used for some time will give a musty flavor to the tea when next used. Put a lump of sugar into the pot before putting away and this will never happen.

If you have trouble with the butter sticking to your butter paddle, rub the moist paddle with salt.

If you open a can of pilonates and only use part of them, place what remains in a jelly glass and cover with melted paraffin. They will keep until you want to use them again.

An old fashioned wire corn popper is excellent for washing vegetables and small fruits. The tight lid allows the water from the faucet to run through the fruit from all sides.

To make pancakes without smoke or odor, make a little salt water, and rub the griddle with it in place of fat. The cakes will not stick and there will be no smoke or odor.

To keep cream from spattering and leaving grease spots when whipped, take a piece of waxed paper, cut a hole in it to fit over the egg-beater and place it over the bowl.

## STORY OF A DREAM

Of course the medical sharp know it all, but let me tell what happened to me. I had a strikingly vivid dream in which I saw and spoke to a dead friend, and she emphasized what she said by laying her hand on my hair, a trick the dead girl had when living. The subject of her speech has no value. But when I woke I could almost feel her touch still. I felt queer where she had touched me, and it faded only a few days ago. I had four fingers, four fingers, four fingers. Letter in New York Times.

## HOMEMADE RAT POISON

Farm and Fireside gives the following recipe for homemade rat poison:

Barium carbonate is a poison which in small quantities is harmless to the larger domestic animals, but will kill rats and mice. Mix four parts of meal or flour and one part of barium carbonate and place the rats will find it. Or mix ordinary oatmeal to a stiff dough in water, with about one eighth its bulk of barium carbonate.

## CROCODILES

The crocodile in a menagerie or a zoological garden is said to be very different creature to the crocodile in his natural habitat. The zoo crocodile is rather a sad, sulky looking reptile. He sniffs all day and eats when he is fed. The crocodile in his natural state must of necessity keep wide awake or he will very likely go hungry or die. He is a prey to those hunting him. He is capable of some most brilliant dashes when occasion offers and his tail is capable of giving a regular pile driver blow.

On the Binue river in Nigeria, there are lots of crocodile. Huge in size, mottled as to color, dirty dull yellow, with big green blotches.

He lies out basking in the sun always within a few feet to the water. From the land side you have no chance of seeing him. Either because his hearing is extremely good or because of the birds which are almost always alongside him, and it may be, giving warning when man with rifle approaches. Perhaps he doesn't like, or can't digest feathers. It may be that he can't pluck a bird. However it may be, one sees ducks and geese and cranes of various sorts and pelicans standing right up alongside a "croc" on the bank; they don't display the least nervousness, and the crocodile seems not in any way hostile to them.

He will pull down a man, out of half a dozen in shallow water, and take a drink, by the nose or by the forehead, and take her away into the deep water, which will be the end of the cow.

Crocodiles post sentries and lie close to the water, which makes it very hard to get at them. A shot may be fired from a canoe or boat, but although the crocodile might eventually up goes his tail and he is often seen no more. Sometimes, but not always, a dead crocodile will float to the surface. Strange to say it is only the "stomach" skin of the crocodile that is of any use and even that is not popular with tanners and dress makers. Hunters have discovered that it is more costly to have crocodile skin cured, tanned and made up into goods than to buy so-called crocodile skin articles all ready for use.

Crocodiles in Nigeria are to be found in all sorts and sizes up to 20 feet long and no streams or lakes are safe for swimmers.

## AN ANCIENT INDUSTRY

Which is the world's oldest industry? This is an interesting question that is certainly difficult to answer, but there is little doubt that basket making can claim to be one of the most ancient of those still in existence.

From the remotest times the Chinese excelled in the manufacture of baskets, and they are still considered the world's best craftsmen in this respect, their careful work being the envy of western manufacturers.

They make their household baskets so closely and firmly that they can be used in many cases as hold water, and are excellent substitutes for buckets. This traditional means great skill and patience in the manufacture, which is only attained through years of practice. The tremendous number of willow trees growing in China supply the necessary material.

Basket making is also one of the longest established of British industries, and the old Britons were noted at Rome for their baskets. The form in which these baskets were made changed but little until the 19th century, when new styles and shapes were introduced.

**Women Warned Against Dye**

A warning has been issued by the London health institutions to women to guard against wearing cheap furs, quantities of which recently have been brought into England.

Many women who have purchased such furs have found themselves suddenly afflicted with a skin rash about the chin and neck. The disease is similar to that which appeared in Berlin in 1912 and last year in Copenhagen, and which was traced to the dye used on furs.

"Major Loeffler, an appointed President Grant's, who had announced the President door over the Hay and Mr. Raikes of the British Embassy," Roosevelt said, "will see them in a few minutes."

"Without turning his face," said, "I know that they were thank me for putting the flag half mast on the White House when old Pauncote died. I don't do it because he was the ambassador, but because he was a d—n good fellow."

**HE GOT A DANCING PARTNER**

Being an aide to the Governor General of Canada is not exactly a sinecure, and there are many times when one must suffer for the privilege of enjoying proximity to greatness.

Mrs. George Black, wife of the former commissioner of the Yukon, knows exactly how it feels to have greatness thrust too close. During the visit of their excellencies Lord and Lady Byng, to Dawson, this summer, a dance was given in honor of the distinguished visitors.

The Yukon is rich in minerals, but lamentably weak in society, buds which explains why late in the evening, one of Lord Byng's aides sought out one of the charming patronesses:

"Do please find me a partner," Mrs. Black" he begged. I haven't had a dance all evening."

Mrs. Black after considerable difficulty, coaxed the partner of one of Dawson's prettiest girls to let her have the dance with the aide. The young lady, willing enough was brought to where the aide was standing, close to their experiences.

Before introductions could be effected, Lord Byng stepped forward in his most urbane manner. "So kind of you to bring me a partner for this dance, Mrs. Black he smiled. Then he danced off with the maid.

"Isn't that too bad?" remarked Mrs. Black consolingly.

"Oh, that's all right," he responded, "but that's what we're paid for, I suppose—losing the best things in life!"

**STAGED A HUMANE BULLFIGHT**

A bullfight, complete and thrilling in all the usual details, without cruelty, without spilling a drop of blood, that seemed impossible, was recently staged with complete success in connection with the Mexican Independence day celebration in Los Angeles, California, says Popular Mechanics.

The bullfight was acted exactly as the ordinary Mexican bullfight, except that instead of the usual sharp-pointed blades which are thrust into the animal, blunt pointed weapons were used. With these sticky weapons the picadors charged the animals, the adhesive base, instead of penetrating the skin, held the animal firmly against the hide giving the appearance of reality without hurting the animal in the least.

In this manner, all the skill and excitement of a real bullfight were retained, but the barbarous features were eliminated, and the usual sickening impressions of the sight removed.

**VACCINATE AGAINST INSANITY**

"The brain of an insane person may be likened to a piano, the intricate mechanism of which is broken, rusted or clogged," says Dr. W. Ford Robertson, pathologist of the Scottish asylums. He shows that insanity is frequently caused by bacterial infection and can be cured by vaccine injections. "The recorded observations," he states, "would warrant the conclusion that the bacterial that most commonly causes acute insanity are streptococcus pyogenes, pneumococcus bacillus typhosus, bacillus lactis pneumoniae." If the form of insanity known as "dementia praecox" could be prevented or cured, statistics show that the insane asylums "would be more than half-empty in a few years' time," and he shows that dementia praecox in its early phase has been cured in six months by vaccines.

**WHERE COCAIGNE COMES FROM**

Cocaigone first obtained recognition as a valuable medicinal drug about 35 years ago and the commercial supply was derived from leaves of the wild coca plant native to Peru. Now however, the shrub is cultivated on an extensive scale in Java which exported this year about 4,500,000 pounds of the leaves.
