EMIGRATION TO AUSTRALIA NOW GROWING LARGER

MELBOURNE, Vic., July 14.—There is in Australia a great deal of interest taken in the question of emigration to its shores. The tide has commenced and each incoming steamer brings a steadily increasing number, who cannot find a living in England. They have all found work in a vast unpeopled land, and the British Government has at last made up its mind to spend \$10,000,000 in transporting members of the working class to where they are needed in Australia. Even the Labor Party in the Commonwealth is now beginning to see that it is useless to declare that Australia, which now keeps 5,500,000 people in a country which is larger than the United States of America, is under-populated, and the movement goes on. The amount which is deposited in the state savings banks throughout Australia during March last, increased by \$31,465 and the total number of open accounts is 2,422,284, thus showing that very nearly half of the men, women and children own banking accounts, and are adding to them at the rate of \$7,500,000 per annum. The total saved amounted to \$630,000 during March, which forms a very satisfactory sum, seeing that there are so many properties open for investment. The trade unions are merely militant bodies that need little for fighting funds, as nearly all their members have plenty of money, which enables them to enter upon strikes without needing financial backing. They own their houses or are paying off a mortgage to make them their own. The electrical engineers are now employed at the rate of more than \$41 a week.

LETTER FROM GLASGOW

The Commerce of the City—Its Rivers And Docks

BY W. J. COTTON.

On our first day in Glasgow, we traversed the street nearest the Clyde and the docks. The way wasn't a pleasant way. There was much noise and dust, caused by the traffic. But the walk gave some idea of the immense commerce of the city, now the second in Great Britain. Yet, all the magnificent growth and development of Glasgow has taken place within the past two centuries. Before the eighteenth century the growth of the city was slow. Previous to 1611, it was merely an ecclesiastical town—a Burgh of Barony under the Bishop. Its growth as a commercial city began with the establishment of its ship-building industry. In 1812 the first European steam boat was built there and named the "Comet." Just before the war, in the year 1913, 755,978 tons of shipping was built there. A corresponding growth was shown in other directions as a result of the enterprise and energy of the Glasgow people, and the development of the coal and iron mines nearby. We obtained a good view of some of the great docks on the banks of the Clyde—one of which, the Kingston Dock, has a water area covering five acres. The shipping in the dock where the Anchor Line steamers are unloaded and loaded again, and the adjoining docks, made a splendid sight. The Corporation of Glasgow owns and operates its public utilities, and the people of the city obtain an excellent service at a cheap rate. One can travel far in a Glasgow street car for a penny, as we discovered when making an excursion to its suburbs; and yet these public utilities are so well managed that they are self-sustaining. Glasgow draws its water from Lake Katrine, twenty-six miles distant. We noticed that the streets are washed every night with water from pipes which are supplied by gravitation. Not only are the streets thus kept clean, but the water in the pipes is renewed and is fresh and clear every morning, at a very small cost. The good government of the city is evidenced by many similar civic economies. No doubt the first class schools and the great University of Glasgow are to be credited with the advancement evident on every hand. Glasgow honors and encourages all gifted Scotsmen. This is evident in her principal square on which there are many fine statues. The highest of these is that of Scott; and one of the most prominent is that of Burns.

Noxious Weeds

What is a noxious weed? An injurious, troublesome and useless plant that is of little or no food value. The noxious weeds in our Province are considered to be wild mustard, orange hawkweed, ragwort, yellow wild tansy, sow thistle and Canadian thistle and we have on our Statutes an Act to prevent the spread of such weeds, which declares that— It shall be the duty of every occupant or owner of land in this Province, to cut down or cause to be cut down and destroyed, at the proper time, to prevent the ripening of their seed, all noxious weeds growing on his land, or growing on the roadside, in front of his land, upon that part thereof lying immediately opposite his land; and it shall be the duty of the Road Inspectors to see that the provisions of this Act, relating to such noxious weeds growing upon the roadside, are carried out within their respective road divisions by giving out a notice to such occupant, similar to that required to be given to the owner or occupant under Section 2 of this Act. Section A of Clause 9 of said Act reads: It shall also be the duty of every Overseer of Roads, to notify the Road Inspector for the Division in which his precinct is situated, of all noxious weeds found growing upon the highways within precinct. Any owner or occupant of land, who neglects or refuses to cut down or destroy any of the said noxious weeds, after notice given by the Inspector as hereinafore provided or knowingly suffers any of such noxious weeds to grow thereon, and the seed to ripen so as to cause or endanger the spread thereof, shall upon conviction be liable to a fine of not less than one dollar, and not more than five dollars for every such offence. Nothing depreciates the value of a farming community more than the unsightly presence of noxious weeds growing along the roadside, and no progressive or enterprising farmer will allow such weeds to grow unchecked. Not only is he endangering his growing crops by a chance of seeding but it detracts greatly from the value of such land to any prospective purchaser to have noxious weeds growing in the vicinity. Within recent years we have noticed a alarming increase in the orange hawkweed. This weed is very troublesome in grass and pasture and is probably distributed largely by birds, but it is spread by creeping roots and works very rapidly from the roadside into the adjoining fields. It may easily be destroyed at this start by applying salt to the sun as long as possible and by thorough cultivation. Any kind of a short rotation will destroy it, and on the sides of the road where it has taken possession when the growth becomes too great to treat with salt the roadside if possible should be plowed and thoroughly cultivated. A weed rating equally noxious with hawkweed is the mustard. This weed has not yet reached all parts of the Island but in the other

Milk Always Sweet in Summer

SUMMER heat makes no difference to Carnation Milk. It's always sweet and fresh when you need it. That's because it comes to you SEALED and STERILIZED. Fresh and rich the day it comes to us, part of the water is taken away by evaporation and it is put into new containers and sterilized. It keeps indefinitely in the cans—or for several days when opened. Carnation Milk solves the milk problem. Winter or summer, it is always ready—never late. None is wasted. Use it as cream, or add water and use it as milk. Carnation Milk adds wonderfully to every milk dish — new flavor and new nourishment. It makes tea and coffee famous and it whips. Order this convenient, economical milk now. Ask your grocer to send you several tall (16 oz.) cans, or a case of 48 cans. At the same time write for the Carnation cook book. It is new — beautifully illustrated—and the many recipes are tested and delicious. Try this recipe.

CARNATION COOKED SALAD DRESSING.

1 teaspoonful salt, 1 tablespoonful sugar, 1 1/2 tablespoonfuls flour, 3/4 teaspoonful mustard, 2 eggs, 1 teaspoonful onion juice, 1/4 cup mild vinegar, 1/2 cup Carnation Milk, 1/2 cup water. Mix dry ingredients, add beaten eggs, onion juice and milk diluted with the water. Add the vinegar slowly, cook in a double boiler until thick, stirring constantly. Remove from fire, strain and cool. This recipe makes 1 1/2 cups salad dressing.

CARNATION MILK PRODUCTS COMPANY, LIMITED, 7.70. JOHN STREET, AYLMEER, ONT.

OP-TOM-ET-RY

The newest profession—that which deals with the scientific fitting of glasses—is called Op-tom-etry.

Those who are qualified to practice are known as Op-tom-etrists. Op-tom-etrists are required by law, like other professional men, to be fully qualified before they can practice as such.

Consult an OPTOMETRIST about your eyes.
