Sponge rubber is coming into use in place of springs in automobile seats and furniture where dampness shortens the life of metal.

The wheels of an automobile designed in Paris can be swung at such sharp angles that the car can be turned around in its own length.

AUGUSTINE COVE AND VICINITY

Mr. Stewart Boulter, Albany, spent the Easter holidays in Tryon.

Mrs. William Mullins, Albany, had the misfortune of falling and badly injuring her leg a few days ago. A speedy recovery is hoped for.

Miss Hazel Sherren, Cape Traverse, spent Easter holidays the guest of her aunt Miss Lillian Milligan, Augustine Cove.

The Misses Bertha Thomson, Lillian Milligan, Augustine Cove, were visitors to Cape Traverse Thursday, the guests of Mrs. Albert Sherren.

Mr. and Mrs. Merrill Dawson, Augustine Cove, intends leaving for U. S. A. in the near future.

Miss Marion Murphy, Augustine Cove, was a visitor in Summerside Thursday.

Mr. Frank Noonan, Borden, was a visitor to Augustine Cove Wednesday.

Mr. Joe Murphy, Augustine Cove, made a business trip to Albany Thursday.

Mrs. Nelson Thomas, Augustine Cove, has been confined to her bed for a few days with a bad cold.

Mrs. Frank Murphy and little son Llyod, Augustine Cove, were visitors to Bradford Sunday.

Mr. Frank Murphy, Augustine Cove, was in Summerside Tuesday on business.

Mr. John O'Halloran, Bradford, was a recent visitor to Victoria.

Mr. Fred Murray, Fernwood, is visiting in Augustine Cove, the guest of his brother James.

Mr. Lester Thomas, N. B., was a visitor in Augustine Cove Sunday, the guest of his aunt, Mrs. May Milligan.

PASSING OF ONE OF ALBERTA'S PIONEERS

Some forty years ago when vast herds of cattle and horses ranged on the prairies south of Calgary and amidst the foothills of the Rocky Mountains, one of the best known names was that of Ings—two brothers of that name Fred and Walter. Fred became prominent stockman in the immediate vicinity of what is now the Prince of Wales ranch. In 1884 Walter Ings left Charlottetown and joined his brother Fred, who was already making a name for himself in the new and unexplored west.

They were highly successful and carried on a lucrative business until 1900, when the partnership was dissolved, Fred moving to Nanton, Alberta, and Walter retaining the original holdings.

About 1918 Walter sold out his High River ranch, consisting of ten thousand acres of freehold and ten thousand acres of leased land, together with about twelve hundred head of stock, to Messrs P. Burns & Co.

Since then the family has resided in Vancouver, making a yearly trip to Charlottetown.

This year they were about to return when Mr. Ings was taken seriously ill, necessitating an operation from the effects of which he failed to recover, and passed away at La Jolla on Thursday, March 29th, at the age of 73.

One brother, Dr. Geo. Ings is at Fort Murray—Fred still ranches at Nanton and Ernest resides in Vancouver. A sister Mrs. Crawford Frost, also lives at Nanton. The interment took place in the family plot in the Union Cemetery, Calgary.

Abegweits Will Present High-Class Entertainment

On Friday, April 20th, the Abegweit A. A. will present a high-class entertainment in the Strand Theatre. This event had been announced some time ago in the press for April 24th, but owing to the fact that another concert has been arranged for the latter date, the Abegweits are using Friday, April 20th.

The proceeds will be employed to thoroughly overhaul the Grandstand at the Abegweit Grounds and put the field and track in first class shape. Owing to the throngs attending baseball games during the summer months this step is necessary to render the stands safe. A large sum of money will be needed and the Abegweit executive have already arranged about half the amount required. The entertainment, of which the program will appear in several days, will include many of the most popular performers of the city, amongst whom will be the Orpheus Eight in several numbers. The support of the public is confidently anticipated in such a worthy cause. Further particulars will appear later.

Offensive Catarrh Weakens the Lungs Causes Headache

HOW TO BANISH CATARRH

Mrs. H. Cameron, a well-known resident of White's Cove, N. B., has discovered a simple, yet efficient manner of stopping colds and nasal catarrh. "For some years," she writes, "I have had catarrhal trouble in my nose and throat, and have been subject to very frequent colds. Nothing gave me the immediate relief I secured from Catarrh-zone. If the nostrils are plugged, and there is a dropping of mucus from the throat, a few drops of Catarrh-zone clears up the trouble at once. If sufferers will use Catarrh-zone, I am sure they will keep free from colds, bronchitis, sneezing and nasal catarrh. Two months' treatment, including hard rubber inhaler. Price \$1.00, small size 50c. Catarrh-zone is guaranteed.

An aerial cableway for both passengers and freight has been placed in operation between two Swiss Alpine towns 2235 meters apart and differing in elevation by 531 1-2 meters.

Health Services of Canadian Medical Association

A BAD HABIT WHICH SHOULD BE STOPPED

All babies acquire very readily, regardless of whether the habits are good or bad. A baby who is rocked to sleep a few times soon refuses to go to sleep without such attention. The "comfort" of all habits, is the most and inexcusable.

No mother would think of exposing her baby to any communicable disease, but she does so if she allows the child to use a "comfort". The "comfort" may fall to the floor or sidewalk, it may be touched by other hands, it may rub against other things, flies may walk over it or, in many other ways it may become soiled with disease germs and carry them into the mouth of the child.

When a child is given the "comfort" to send him to sleep, it generally drops from his mouth when he is asleep, and frequently it becomes the resting-place for flies which may have come from any filthy place. When the child awakes and cries, the mother rushes to the baby and places this soiled thing in his mouth.

The baby cries for the "comfort" because it has become a habit. If he were never given one, he would never want one. It is not natural for a child to have something in his mouth all the time. Sucking a "comfort" does not soothe the child after a few minutes. It tires him and makes him irritable. Like the constant chewing of gum or sucking a dry pipe, it causes an unnatural flow of saliva. The swallowing of this and the movement of feeling like a hard lump back of the throat.

Continued use of the "comfort" alters the arch of the mouth and frequently causes protruding upper teeth with a short, tight upper lip. This often means that the jaw arch is not of normal shape or appearance, and proper chewing of food is difficult, if not impossible.

There is only one place for any and all styles of "comforts" the fire or the garbage pail, never baby's mouth.

Questions concerning health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered by letter. Questions as to diagnosis and treatment will not be answered.

A PRAIRIE ROSE

The four act comedy-drama, "A Prairie Rose" was staged in the C. M. B. A. Hall, Vernon, B. C., on Easter Monday evening, by the Vernon Dramatic Society. This was the first appearance on a public stage of this new organization and they deserve much credit for the success they made in rendering this comedy-drama. The different parts were carefully prepared and given with such ease and gracefulness that would rival more experienced amateurs. Although the stage was almost impassable the Hall was filled to capacity and judging by the generous applause the audience enjoyed every moment of the evening's programme.

During the intermissions excellent music was rendered by Mr. J. J. McGilvray and Mrs. A. Sullivan.

CAST OF CHARACTERS

- Silas Wilder—A deaf old ranchman—Owen Doherty.
- Dr. Raymond—A Chicago physician—Charles Murphy.
- Philip Bryant—A young lawyer—Emmett Henry.
- Archie Featherhead—A young dude—Byron Henry.

Bedeque and Vicinity

Miss Nellie Bernard teacher of Bedeque school, arrived back after spending her Easter holidays at her home in Rustico.

Mr. Gilbert Richards, Fernwood, had the misfortune of losing two ends of his fingers last week.

Miss Selma and Master John Myers, Carleton, left Friday morning to visit friends and relatives in Fredericton P. E. I.

Mr. Nathaniel Pearson, Chelton, was a visitor to Tryon last week.

We deeply regret the news of the death of Miss Margaret Dawson, youngest daughter of Mr. and Mrs. Lemuel Dawson, Albany. She was a faithful telephone operator and will be deeply missed in her home and surrounding districts. We extend our heartfelt sympathy to those who are left to mourn a daughter and loving sister, funeral will be held tomorrow Thursday.

Miss Margaret Wright, P. W. College, arrived home Wednesday Eve. to spend her Easter holidays with her parents Mr. and Mrs. Clifford Wright, Middletown.

Miss Mildred Wright Mount Allison spent the week end at her home in Middleton.

Dr. J. J. Staley, pastor of "Baptist church" Bedeque, arrived home after being away for sometime holding Evangelistic meetings.

The death occurred at his home in Bedeque Sunday, April 8th. Mr. Charles Black had been sick for some time with pneumonia, but all that medical skill could do, could not keep him with us. God would otherwise and he was called to the "Great Beyond" He leaves to mourn their loss a wife (nee Annie LaPage) two sisters, Mattie living at home, and Mrs. David Schurman of Reading, Mass. Funeral was held on Wednesday 11th. Service at the house was at 2 P. M. Private, and thence to United Church Bedeque. Interment Bedeque Cemetery.

Miss Elsie Brown, teacher Lower Bedeque, school, spent her Easter holidays at her home in New Haven.

Miss Verna Weeks, teacher Fernwood school, spent the week end with her parents Mr. and Mrs. Albert Weeks Carleton.

Rev. A. J. Reynolds, Bedeque preached in Seartown last Sunday afternoon, taking for his text: "He is not here, but is risen;" St. Luke 24-6. It was a very impressive sermon and the choir rendered some nice Easter music.

Mr. and Mrs. Wright Leard, Bedeque, crossed on the car ferry last week enroute to Moncton, N. B.

Messrs Chapman and Arthur Holland Mount Allison spent their Easter holidays with their parents Mr. and Mrs. A. E. Holland, Seartown.

Among the visitors to Summerside last week from this vicinity were the following Mr. and Mrs. Percy Allen, Messrs Lewis and Walter Wright and George Runkle.

Mr. and Mrs. Edwad Gardener, Chelton, were visitors to Craapud last week.

Mrs. David Schurman Reading, Mass. Arrived Friday evening to her brother's Bedeque.

Miss Eliza Fueman Seartown, was a visitor to Bedeque last week.

We are sorry to hear Mr. Learder Tombs Bedeque is confined to his home with pneumonia. We all hope he will be out around again in a few days.

We are glad to hear Mr. Charles Schurman, Chelton, is feeling a lot better, after being layed up with La Grippe.

Miss Mae Emma, teacher Chelton school, spent her Easter holidays with her parents in Enmore.

Mr. David Gardner arrived home to Chelton, last Friday Eve being

- Grade II, 1. Norman Gillis, Grade I, (a) 1. Ruth Nicholson, Grade I, (b) 1. Chester Gillis, 2. Mervin Gillis.
- Grade I, (c) 1. Jean Nicholson, Grade I, (d) 1. Channing Gillis, 2. Manson Murchison, Annie Murchison, Teacher.

POULTRY NOTES

POULTRY NOTES. Submitted by POULTRY DIVISION, DOMINION LIVE STOCK BRANCH. This information given in the interests of better farm flocks. All inquiries to be addressed to Box 200, Charlottetown.

INCUBATION

SELECTING BROODY HENS

A hen to be a good brooder should be medium in size and well feathered. The extremely large hens are often clumsy and break eggs. One must be sure that the hen possesses the broody instinct before eggs are placed under her for hatching.

The nest should be constructed so that it is comfortable and can readily be cleaned. A box 14 inches square, and about 12 inches deep is generally satisfactory. A piece of sod with the grass side down should be placed in the box. Then the corners should be filled with earth, and the centre of the nest should be the lowest point. A thin layer of straw is then placed above the sod. If the nest has been properly made the eggs will roll together in the centre of the nest, and yet can be rolled apart with little effort. The hen should be dusted with a good house powder before setting and after she has been on the nest for about a week. This is very important. Plenty of fresh water and feed should be available at all times. The hen should not be disturbed during the hatching of the eggs.

ARTIFICIAL INCUBATION

Artificial incubation is an art practised centuries ago. The past 25 years have seen the greatest development. There are incubators of all sizes for all conditions sold at different prices. During the past few years the large commercial hatchery has played an important part in the hatching of chicks.

Incubators, as a general rule, make it possible to control incubation. The chicks are all of the same age, and therefore can develop more uniformly. Some disadvantages are the cost of the machine as an initial investment, and some danger of fire. However, the risk is minimized, or very small, in the new machines. In the small machines we have three classes, e. g. hot water, hot air, and electric. Hot water appears to be the most popular.

TIME TO HATCH

Chicks should be hatched early as a general rule because the profits on poultry raising depend upon the fall and winter production, and one will also notice that the early hatched chicks make the best development. This naturally is effected in the productivity of the flock. If one is interested in obtaining egg production throughout the entire year it is a good plan to keep in mind this factor of early hatching. However, one should keep in mind climatic conditions also, and be governed somewhat from this standpoint.

CLEANING THE INCUBATOR

An unclean incubator is conducive to poor hatches and high mortality in chicks. The eggs should come from healthy breeding stock kept in strictly sanitary quarters. In so far as it is possible the eggs should be clean and free from dirt which may harbor disease organisms. The interior of the incubator should be disinfected thoroughly, as well as egg trays and nursery drawers. There are several good commercial products on the market for this purpose.

SELECTING EGGS FOR HATCHING

The success of artificial, as well as natural incubation, depends upon the quality of eggs. The selection of the eggs for the incubator should be very carefully done. Size, texture, and uniformity of shape should be considered. The size, shape, color and quality of the shell of the eggs are heritable characteristics that will show up in the eggs that are produced by the pullets.

Eggs should not be saved longer than 14 days for incubation. Keep them in a dry room at a temperature between 50 and 60 degrees. The eggs should be turned occasionally while being saved for hatching.

The best success in artificial incubation will be obtained if the directions for incubation as given by the manufacturer are followed.

SUMMARY

- (1) Do not save eggs until 10 days after male has been placed in flock.
- (2) Do not save eggs for more than 7 days after male has been removed.
- (3) For best results do not set eggs that are more than 14 days old.
- (4) Place eggs for hatching in a cool dry place. (50 to 60 degrees)
- (5) Early hatched chicks consistent with weather conditions are the most profitable.
- (6) Treat hens for lice before setting.
- (7) Do not overheat or chill chicks.
- (8) Do not overcrowd chicks, not more than 350 to the largest brooder.
- (9) Use judgment in feeding young chicks.

LETTER OF SYMPATHY

North Wiltshire, P. E. I., April 6th, 1928.

Mrs. A. Clow, Freetown.

Dear friend and sister member:—We the members of the North Wiltshire W. M. S. wish to express to you our deepest sympathy in this the hour of your sore bereavement.
