Re Local Board of Health For Township 67

Continued from Page Four benefit the facts are these: On Friday the physicians waited on him; on Saturday one of the members of the board placed on the home a quarantine; on the following day, Sunday, he died; and following his death he received immediate respectable attention and further I wish to say that I investigated the case and found that Mrs. Ross allowed that the Board of Health gave the home good attention. One of the members visited them several time during Saturday and Sunday. Now as I said above, a local board

of health gives its time and attention gratuitously and our board is very thankful to those outside of the board who have assisted us recently in our work. I hope that it will not come to my notice again or to any other members of the board that any person shall circulate any report of a false and obstructing nature otherwise they will be immediately brought to task I am Sir, etc. THOS. WASTED PATIENCE

He was a green Scottish lad, and one of his duties was to answer the telephone. When first called on to do so, in reply to the usual query, "Are you there?" he nodded assent. Again the question came, and again, and yet again, and each time the boy gave the answering nod. When the question came for the fifth time, however, the boy, losing his temper, roared through the transmitter: "Man, are ye blith? I've been noddin' ma head aff for the last half-oor!"— Boston Transcript.

Sixteen Ounces to the Pound Avoirdupois Weight Versus Apothecary

There seems to be a common error in the minds of many people regarding drug-gists weights. For instance, when they buy Cream of Tartar, borax, sulphur and many of the other thousand and one things which are sold in a drug store, they think they get Apothecaries weight—twelve ounces to the pound.

This is a mistake, for Avoirdupois weight—sixteen ounces to the pound, is used in such cases. Apothecaries weight is used only at the prescription counter or in the compounding of other medicinal preparations. One pound Apothecary, consists of 12 ounces of 480 grains each—a total of 5,760 grains to the pound. One pound Avoirdupois, consists of 16 ounces of 437 1-2 grains each—a total of 7,000 grains to the pound.

The Apothecary ounce is the heavier, but the Avoirdupois pound is the heavier by 1240 grains, because it contains 16 ounces Avoirdupois. When you trade here—you get a 7,000 grain pound and the finest drugs money can buy.
