Blue Bird Standard Tea offers the most for your money in flavor, bouquet, strength and economy. As good tea cannot be bought anywhere in the neighborhood of its price

Brings Happiness!

Of Interest to Farmers

Best be done by tying the skin from the dead lamb upon the back of the one adopted. One plan that the writer adopted in dividing the milk equally among the lambs, or in case of a lamb where a good milker was not without a lamb, was to tie the ewe with a rope by the neck to a corner of a closed pen or bed with the adopted lamb beside her. She must be tied, for in some cases a ewe will kill a lamb, save the lamb with her for a day or so. Then remove the lamb to the outside, but leave the ewe as before, and have a dog to bark and general row. If engaged in destroying the lamb, but out of sight of the ewe, then take the lamb to the ewe and watch if she will let it suck. Keep the ewe tied as before. Sometimes it is necessary to let a dog into the pen beside the ewe when the lamb is returned. If a plan is persisted in it will generally be found successful, and in lay or so the ewe can be let loose, when she shows signs of liking to her adopted lamb.—O. J.

The first time a bit is put into a colt's mouth. Everything should be done gradually, and nothing in a hurry. As soon as the young horse is accustomed to having a bit in the mouth, and is used to carrying a saddle or wearing the harness the animal may be mounted or harnessed to a vehicle without further ado.—Live Stock Journal.

HORSE NOTES

If the oats are going to be short substitute a little corn in the horse ration. Good horses are the product of nature, but the devil must have lent the men who treat them roughly.

When having the team shod, insist that the shoe be fitted to the foot, rather than the foot to the shoe.

If the mare was not bred last spring breed her to produce a fall colt. Good horses command a satisfactory price. Harness sores are painful to the horse. Many such sores could be avoided if the teamster paid attention to his work.

On many farms the teams are kept on the binder, or on the wagon, hauling in until after dark. It will pay to water and feed the horses at the regular time. It will freshen them and they will do better work.

Never send a horse or team on to the road with a weak or ineffective harness. Accidents are common enough without inviting them.

When the brood mare is put to hard work the colt should be dehorned upon oats and grass for its sustenance rather than entirely to its dam. When the atmosphere is moist and heavy one should work the horses carefully.

When and How to Dehorn.

1. Caustic Potash Method.—The horns may be prevented from growing on young calves. When the calf is from 4 to 10 days old, clip the hair from over and around the horn bud or knob. Rub vaseline into the surrounding hair to prevent the caustic potash stick paper, to protect the hands, leaving the end exposed, slightly moisten the end of the stick, and rub on each horn alternately three or four times, allowing the place to dry each time. Do not have the stick so wet that the solution will run down the side of the calf's head. Keep the calves away from rain, which would wash the caustic over the face, burning it and possibly destroying the eyes.

2. Mechanical Method.—Saws and clippers are used to cut off horns already grown. Clippers are better for young cattle than for old ones, as the clippers are liable to shiver the hard bone in old cattle, making a slow healing wound. Cut the horn so closely as to take off one-quarter inch of the skin. If not cut closely, the stubs will grow out and will again be a menace, as well as spoil the animal's appearance.

The best time to cut off horns is from March 15 to April 15 or during October; there is more danger from insects in warm weather.

3. Chute for holding cattle while dehorning is a very great convenience. Possibly not every farmer needs to maintain one; three or four farmers might co-operate in this matter.

Many Poisoned by Frozen Eggs.

During the hot summer that has prevailed in France there have been many cases of poisoning from eating nasty with a so-called "eggs" film. Investigation shows that this film was made from frozen eggs. These are imported from China into the United States in large quantities. Dr. L. Doret, a member of the French Academy of Sciences, who has made a special study of the matter, says frozen eggs are eight times as poisonous as fresh ones, in which the prolonged baking at high temperature kills the germs which they are contaminated.

Hints for the Motorist

By Albert L. Clough Editor Motor Service Review of Reviews

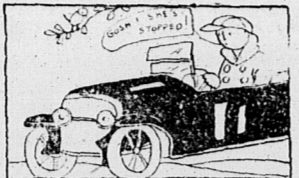

Do Your Grease-Cups Really Grease?

MAJORITY OF CARS still depend for the lubrication of their spring-bolts, steering connections and certain of their bearings, upon grease-cups that are turned down by hand. If they are operated frequently and do their work properly, the effect will be to postpone the "ratty period" and the need of many replacements, but merely screwing down the cups is not always sufficient. It must be done intelligently. If a cup is distributing its grease as well as it ought, a little of the lubricant will be made to ooze out of both ends of the bearing. If it does not, the result is not at all convincing, and it is more than probable that a part of the bearing surface is left dry, and will wear out fast. Continued attempts to operate cups without evidence that grease is forced fully into or through the bearing are almost futile and misleading. It may be that the grease-ways have become so plugged with hardened lubricant that nothing can be forced through them or that the cap of the cup does not fit its threads tightly enough to permit the required pressure to be attained. Cleaning out the grease passages, replacing defective cups, and the use of thinner grease are the remedies. At any rate it is no use twisting the cups, unless one is sure that grease is reaching its mark.

ENGINE STARTS BUT SOON STOPS

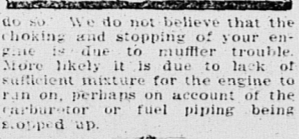

A. L. G. writes: My engine is in good condition mechanically, but when I start it it chokes and stops almost immediately. Would a closed muffler cause this and would the pressure of the exhaust be likely to blow off the end of the muffler? Answer: It is almost inconceivable that a muffler should become so stopped up to prevent an engine from running at all. However, it might prevent anything like full power or speed from being obtained, especially with open throttle, and might lead to unusual heating of the circulating water. No exhaust pressure that the engine could develop could cause a muffler to burst, but the explosion of unburned charges within it might

trouble most likely is that your battery is nearly discharged, so that it does not furnish the current necessary to bring the lights to full brilliancy. You better have your battery tested, repaired, if necessary and recharged and then have the charging rate of the generator and its connections to the battery carefully examined to make sure that it is sending enough current to the battery to keep it in a charged condition.

TWO CARBURETORS ON A FORD

W. B. asks: Would it be possible to put two carburetors on a Ford car, one for each pair of cylinders and, if so, would it increase the power and speed of the car? Answer: We suppose that it would be possible to do this, although two intake manifolds would be required, but there is no reason to think that it would increase the power and speed at all. We are certain that the arrangement would be an awful nuisance.

BATTERY CHARGE IS LOW

B. L. writes: The lights on my car are pretty good, when it is running fast, but when running slowly I have hardly any light at all. What is the matter? Answer: When your car is running fast, your lights are supplied directly from the generator, but when it is running slowly, they are supplied from the battery. Your

Questions of general interest to the motorist will be answered by Mr. Clough in this column, space permitting. If an immediate answer is desired, enclose self-addressed, stamped envelope.

Conclusion of Premier Meighen's Speech

(Continued from Page Nine)

It not lead, in the course of time, to the swallowing up of this country by the United States? A voice: Sure.

Mr. Meighen: It would lead to that, if the condition as it exists follows night, and we should find ourselves more interested in what they were doing with the tariff in Washington than at Ottawa. The peril of the very independence and integrity of this country in following the course proposed by our opponents is so manifest that every statesman in this Dominion that ever got very far, that ever studied the problem and saw the danger of it, has been against it. Even Sir Wilfrid Laurier did once, but he was lured by Mr. Fielding into the mistake he made in 1911. Edward Blake saw it in 1891, and he manfully wrote a letter to the electors of Durham and told them that the very course now proposed to you by Mr. King would mean the swallowing up of the Dominion; and he told them that in language just as plain as any man could use. I ask the Liberals here, who have the same interest in their country as Blake had, and which every man who ever sat in a post of responsibility ever had since the seventies, I ask you to take to heart the warning of Blake and never forget you are Canadians. Never slacken the resolve that this country shall march on not as the adjunct of another but as Canada. Keep firm the resolve that Canada shall not place itself, in any position in which it will be at the mercy of another nation. It is said that the Fordney tariff is a punishment for our not having accepted reciprocity in 1911. That is nonsense. If the United States had wanted to punish Canada for not having accepted reciprocity, why did they not do so immediately? Instead they took down their tariff in some cases because they thought they could handle our goods and it would pay them. The fact is that the Fordney tariff has been imposed against every country impartially. We had reciprocity with them in wheat and flour both ways and it lasted just six months, when they imposed 35 cents of a duty on wheat and 25 per cent on flour. They are now suggested to us that they intend to do anything of the kind. We also had a treaty with them in regard to potatoes and this spring they put up 25 per cent a bushel on this product. Why did they not respect that little treaty? Simply because they thought it did not pay them. Therefore, I say, let every man and woman who loves Canada declare, without equivocation, that we will not bind ourselves to any competitor but shall march on to our own destiny.

"Executed" Spy Awarded \$20,000

CASTLE BLAYNEY, Ireland, Oct. 11—John McCabe, a former soldier, has been awarded £4,000 as compensation for injuries inflicted by the "Irish Republican Army." According to the evidence where he was imprisoned in a cottage. A priest was sent for and the last rites administered. Then McCabe was taken outside and three bullets were fired at him. He was left for dead, but revived, and despite his wounds and bonds, managed to crawl to a stable where he was discovered. A card was pinned to his body inscribed: "Convicted spy. Beware. I. R. A." The quarter sessions awarded the damages, which, it is expected, will be levied on the taxpayers of the district.

Capture Of Vimy An Object Lesson

HAMILTON, Ont., Oct. 11—How Vimy Ridge was taken by the Canadian troops was practically told to a mass meeting of Boy Scout at the Savoy Theatre this afternoon by Rev. Canon Scott, C. M. G., D. S. O., M. C. A. T. Enlow president and Col. Wm. Hendrie introduced the speaker, playing tribute to his distinguished war record. Canon Scott told the boys that the Scout movement gave boys the opportunity to work off surplus steam, which no normal boy was without. In vivid language he told of the great military feat, the capture of Vimy, and said that the Canadian troops had never once failed to reach their objectives. "Life is full of that," said Canon Scott. "Life is like that, objective. It requires high aspirations and you must put into your lives the principles that made those men so glorious." After the meeting had been dismissed, Canon Scott personally greeted the boys in the lobby of the theatre.

SEED FAIR

TRYON SCHOOL

The Tryon School Fair was held on the school grounds of the Tryon Consolidated School, Tuesday Sept. 20th. The fair was one of the most successful held this year. The live stock exhibit being especially good. Prizes to the value of \$160 offered by the Craupad and Tryon Creameries stimulated the interest in this exhibit. The schools taking part were North Tryon, Augustine Cove, Victoria, and Tryon Consolidated. The points scored were as follows: Tryon Consolidated, Exhibits, 228, Sports 90, Total, 318.

Total 243. North Tryon, Exhibits 139, Sports 15, Total 154. Augustine Cove, Exhibits 24, Sports 32, Total, 56. Victoria, Exhibits 185, Sports 58; Following is the Prize List:

CLASS 1, GRAINS

- Section 1, Oats: 1. Marjorie Leard, Tryon Con. 2. Lloya Howatt, Tryon Con. 3. Mary Rogerson, Victoria. 4. Helen Rogerson, Victoria. Section 2, Wheat: 1. Jeanette Rogerson, Victoria. 2. Vernon Webster, Augustine Cove. 3. Sheldon Dixon, N. Tryon. 4. Willie Lea, Tryon Con.

Section 3, Corn

- 1. Donald MacLeod, Victoria. 2. Max Thompson, N. Tryon.

Section 4, Beans

- 1. Norman Wood, N. Tryon. 2. Ethel Leard, N. Tryon. 3. Margaret Calbeck, N. Tryon. 4. Florence Leard, N. Tryon.

CLASS 2, ROOTS

- Section 1, White Potatoes: 1. Donald MacLeod, Victoria. 2. Frederic Hubley, Tryon Con. 3. Walter Bell, N. Tryon. 4. Fred Walton, Tryon Con. Section 2, Red Potatoes: 1. Annie Calbeck, Tryon Con. 2. Lloyd Inman, N. Tryon. 3. Donald MacLeod, Victoria. 4. Fred Walton, Tryon Con.

Section 3, Blue Potatoes

- 1. Gordon Lord, N. Tryon. 2. Vernon Webster, Augustine Cove. 3. Marjorie Leard, Tryon Con. 4. Marquette Bell, Tryon Con.

Section 4, Carrots

- 1. Hilda Foy, Tryon Con. 2. Amy Ferguson, Tryon Con. 3. George MacWilliams, N. Tryon. 4. Frederic Hubley, Tryon Con.

Section 5, Turnips

- 1. Chester Lea, Victoria. 2. Vernon Webster, Augustine Cove. 3. Lester MacLeod, Victoria. 4. Donald MacLeod, Victoria.

CLASS 3, VEGETABLES

Section 1, Squash

- 1. Sidney Dawson, N. Tryon. 2. Eldon Dawson, Augustine Cove. 3. Ralph Lyman, Tryon Con.

Section 2, Tomatoes

- 1. Ralph Lyman, Tryon Con. 2. Mae Foy, Tryon Con. 3. Donald MacLeod, Victoria. 4. Earle Mabey, Tryon Con.

Section 3, Onions

- 1. Ralph Lyman, Victoria. 2. Zeta Snow, Victoria. 3. Clifford MacQuarrie, Victoria. 4. Gordon Lord, N. Tryon.

Section 4, Cucumbers

- 1. Fred Walton, Tryon Con. 2. Gordon Lord, N. Tryon. 3. Hilda Foy, Tryon Con. 4. Ralph Lyman, Tryon Con.

Section 5, Beets

- 1. George MacWilliams, N. Tryon. 2. Donald MacLeod, Victoria. 3. Margaret Calbeck, N. Tryon. 4. Boyd Snow, Victoria.

Section 1, Wealthy Apples

- Section 1, Sweet Peas: 1. Ruby Lord, N. Tryon. 2. Scot MacQuarrie, Victoria. 3. Amy Lea, Tryon Con. Section 2, Any Kind of Flowers: 1. Mae Foy, Tryon Con. 2. Marguerite Bell, Tryon Con.

Famous Old Recipe for Cough Syrup

Essentially and cheaply made at home, but it beats them all for quick results. Thousands of housewives have found that they can save two-thirds of the money usually spent for cough preparations, by using this well-known old recipe for making cough syrup at home. It is simple and cheap but it has no equal for prompt results. It takes a family a cough and gives immediate relief, usually stopping an ordinary cough in 24 hours or less. Get 2 1/2 ounces of Pinex from any druggist, pour it into a 16-oz. bottle and add plain granulated sugar syrup to make 16 ounces. If you prefer, use clarified molasses, honey or corn syrup, instead of sugar syrup. Either way, it tastes good, keeps perfectly, and lasts a family a long time. It's truly astonishing how quickly it acts, penetrating through every air passage of the throat and lungs—loosens and raises the phlegm, soothes and heals the membranes, and gradually but surely the annoying throat tickle and dreaded cough disappear entirely. Nothing better for bronchitis, spasmodic croup, hoarseness or bronchial asthma. Pinex is a special and highly concentrated compound of genuine Norway pine extract, known the world over for its healing effect on the membranes. Avoid disappointment by asking your druggist for "2 1/2 ounces of Pinex" with full directions and don't accept anything else. Guaranteed to give absolute satisfaction or money promptly refunded. The Pinex Co., Toronto, Ont.

More Months and More Miles

Some motor-car owners figure battery life by miles—others by months—of service. Both are suited with the Willard Threaded Rubber Battery. Willard Threaded Rubber Insulation is the secret of the "most miles of uninterrupted service per dollar" of this battery. As its name implies it is made of rubber and threads—rubber to insulate the plates, threads to make the rubber porous. It puts extra strength at a point where many batteries are weak. It puts an end to re-insulation worry and expense. It lasts the life of the plates. You can get the extra months and miles of battery service only by buying the Willard Threaded Rubber Battery. You can recognize it immediately by the Thread-Rubber Trade-Mark, stamped in red on the side of the battery case. WILLARD STORAGE BATTERY CO. OF CANADA Limited Factory and Office, 100 Sterling Road Toronto, Ont. Go to your nearest dealer for Willard Service or a new Willard Threaded Rubber Battery: PRINCE EDWARD ISLAND Charlottetown, Bourke-Windsor Serv. Sta. Summerside, J. F. Taylor Service Station
