EXPORT OF SCENERY TAKES SECOND PLACE AMONG INDUSTRIES

Tourist traffic of major importance to Canada states C. W. Johnston of Canadian National Railways—Value in Excess of \$200,000,000.

MONTREAL, Nov. 7.—The tourist industry in Canada is growing by leaps and bounds, and the season just closing is a record in the number of tourists it has brought from other countries into Canada, and also in the amount of tourist travel engaged in by Canadians themselves.

"Hunting and fishing resorts served by the Canadian National all across the Dominion also report an unprecedented rush of business during the season just closing.

While the 1928 fishing season, in some parts of Canada was not as favorable as usual, due to abnormal water conditions, there was 100 per cent of the territories along our line which did not at various times during the season, report catches which broke all records.

With the figures for the year 1928 not yet available, railway bookings as shown by the records of the Canadian National Railways System show a tremendous increase over those of the previous year.

The total amount of money spent in Canada this year by holiday makers cannot be estimated for some time, but we have an estimate for 1927 which shows that the total amount of money spent by tourists in Canada of more than \$275,000,000.

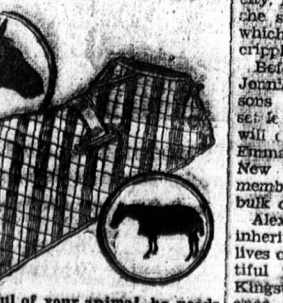

ALL PARTIES LOSE TO LABOR

LONDON, Nov. 6.—There was a day over the result of the municipal elections throughout England and Wales yesterday, which they accepted as a portent of next year's general election.

AGED LADY IS HEIR TO \$200,000

(Canadian Press) ALEXANDRIA, Nov. 2.—Mrs. Wm. Prince, 50 years resident of this city, is heir to \$200,000. At almost 70 she still lights a coal oil lamp by which to do her knitting. She is crippled with rheumatism.

"Save The Horse"

Be careful of your animal, he needs care this weather. Beware of getting him over-heated and then chilled. Get him warm blankets for standing during calls.

S. L. HARDY & CO. 187 Queen Street, Charlottetown, P.E.I.

HEALTH HINTS

MORE SUNLIGHT

If you deprive a small baby of its regular share of sunlight and fresh air, you are doing the same thing as starving part of its food.

Dr. A. Grant Fleming of the Montreal General Health League tells of an unusual case. A Canadian doctor was visiting a family in poor circumstances. The baby, three months old, was not well and he noticed that both mother and baby looked very pale and wan.

The doctor was astounded. The mother told him she did not go out because sunlight and fresh air would be too strong for the child. The grandmother, who was in the room, listened to the doctor's comment.

The entire family was ignorant of the simplest principles of health and hygiene. Because of it, one young Canadian has started life, one day a bed-ridden invalid. Accurate health information is something every person should have.

Here are a few more facts about sunlight and ultra-violet rays worth remembering. In the winter months, we get fewer ultra-violet rays from the sun. In the summer, there are plenty.

VICTORIA, B. C.—Preventable disease is still taking a serious toll of life in this country, despite efforts which are being taken to meet this problem.

Dr. Gordon Bates, of Toronto, Ontario, made this fact public at his second lecture on preventable diseases. He emphasized what a tremendous burden to the Dominion of Canada the cost of sickness is. Every day in the year 180,000 people are disabled by illness in Canada.

Dr. Bates expressed the opinion that health should be looked upon as a matter of greater importance than any other. He pointed out that the duty of the citizens of Canada is to see that their representatives are impressed with the importance of public health.

The speaker dealt with the effective manner in which medical science has gained control of the dreaded diseases of smallpox and diphtheria. The discovery of vaccination and the subsequent application of it has been responsible for the elimination of the appalling outbreaks of these diseases.

Dr. E. H. Young, provincial secretary of health in moving the vote of thanks to Dr. Bates, supported the arguments of the latter in favour of vaccination. He pointed out that the medical profession is conducting the campaigns to are public health have nothing to gain and are only active in this work because of a desire to benefit humanity.

QITAWA, Ontario — A survey made by the Metropolitan Life Insurance Company has revealed some interesting information regarding the possibilities of death by tuberculosis. It is recorded that workers employed in the trades and occupations where the air is charged with dust show a much higher death rate from this disease than most other classes.

TORONTO, Ontario—Dr. C. J. Hastings, Toronto's Medical Officer of Health in a recent interview made the statement that only two classes of every community receive proper medical attention, the well-to-do and the indigent. The reason he assigned to this fact was that the great mass of people, who have only moderate means, cannot afford the medical services which assure themselves and their families of health safeguards.

"When one considers that man-power, brain and brawn, is a nation's greatest asset, it is difficult to understand why this large proportion of the population is not given more consideration," said Dr. Hastings. "Cases have come under my observation that illustrate this fact."

Welsh miners who have been unable to get work are taking courses in a school for writers.

A Foot Note to Prohibition

Much has been heard since Prohibition about the extension of the drinking habit to the schoolboy set, but a late dispatch from that celebrated home of novelties, Brooklyn, discloses that the net effects of the eighteenth amendment are only beginning to be felt.

Other sections may have their grandmothers, red-nosed dry politicians and tipping members of Prohibition societies. It has been considered for Brooklyn to produce the disorderly horse. An agent of the ubiquitous S. P. C. A. noticed an aged animal acting strangely between the shafts of a pedlar's cart.

Public Health Briefs TORONTO, Ont.—For some years past the name of Dr. Winifred Cullis has been familiar to the general public as a whole but to the medical profession in particular.

The committee is investigating the accommodation possible for those who cannot afford to pay the fees of from fifteen to twenty guineas per week demanded by the hospital for accommodation but can afford to pay from four to seven.

Tullips should be set from four to five inches deep, measuring from the shoulder of the bulb. They cannot be harmed by deep planting.

TORONTO, Ont.—The report of the Toronto Health Department for the month of September shows that whooping cough and measles were the only two diseases to show an increase over the record for the same month of 1927.

TORONTO, Ont.—Four prominent Canadian health officials have been appointed to the Connaught Laboratories, Fellowships in the School of Hygiene of the University of Toronto.

FALL BULBS It is difficult to convince many gardeners brought up in old-fashioned gardening methods that everything that grows shouldn't be manured.

At this time of the year especially, if the child appears to have a fever, or is vomiting, or if he has a sore throat and he will not be able to move his arms or his legs.

The Angler's Paradise

WHERE can be found such sport as abounds in the lakes, rivers and bays of the Maritimes! And where can be found a chew of such satisfying goodness as Big Ben tobacco! It is always in the best possible condition because the plug keeps Big Ben fresh and moist—it does not dry out, chip or crumble and there is no waste.

BIG BEN PLUG Chewing Tobacco

Early spring before it is removed. They are likely to be broken off when the mulch is taken from the bed. Planted at proper depths there is no real necessity for mulching unless the bulbs are planted so late that they have no opportunity to form anchoring roots before hard freezing sets in.

CANADA'S AGRICULTURAL CROPS ARE VERY VALUABLE MONTREAL, Que., Nov. 6.—Canada's agricultural crops are worth more than \$1,500,000,000 a year—equal to the receipts from the Dominion's fisheries, mines and forests combined—according to Dr. E. S. Archibald, Director in Charge of the Dominion Experimental Farm at Ottawa.

The lowest priced—high grade Stock Fattener and Conditioner you can buy

High in Protein and Low in Fibre

WE have just received a shipment of Sampson Feed, a general purpose feed for cattle, hogs and sheep, and recommend it highly for use this time of year.

Sampson Feed contains just the proper mixture of valuable stock-feed ingredients. Its high protein content gives it the necessary fuel for growing animals while it contains a little fibre as other feeds costing \$5.00 more per ton. It is excellent for feeding hogs just before finishing off. Lets you market them 30 to 45 days earlier.

Sampson Feed Contains Hominy Feed, Oat Chop, Bran, Barley Chop, Rye Shorts and Oilcake Meal. Chemical Analysis Protein 12%; Fat 3%; Fibre 10%. DeBlois Bros., Ltd. Wholesale Distributors
