

Attention Farmers Near Charlottetown

Take advantage of the excellent river ice for hauling your Turnips, Table Stock and Seed Potatoes. We will arrange to have our trucks meet you at the edge of the ice at Charlottetown. Do not ask us to handle your Turnips allowing some other dealer to have your Potatoes. This positively will not work.

Table Stock is priced at the ceiling and will not advance to an amount equal to normal shrinkage for the remainder of the season. Seed is firm. Remember, there could be a ceiling placed on Seed.

Fertilizer - We would like to have your Fertilizer orders in right away but we are not advancing dep-... We have Fertilizer now in stock and plenty booked and assured that it will be here in ample time. Farmers short of labor should plan to use mixed Fertilizers for their entire crop. In the past, on mixed Fertilizers, you had to buy prazulium for C. I. L., Colonial and International. Remember, this year, they are costing you practically the same as the Island mixture due to the fact that the Government have subsidized the freight rates. We can arrange to secure you Granular Fertilizer this year.

Victory For Love

By PAMELA WYNNE

(Continued from page 2)

John bolted upstairs. And five minutes later, settled in front of a beautiful fire, John thought that after all it wasn't so bad. Mrs. Manvers-Pollock, proceeding to extract large coarse knitting from her workbag on her lap, said to her husband, "This morning I spoke to Mrs. Maturin about the matter that I am now going to bring to your notice," she said, "it is this. Last night at about midnight I was sitting awake and, as my window was raising, I saw a light in the sky and there was an intermittent flashing of what looked like a torch. Signaling, in fact," she said, "there; you see, there is nothing more fatal to comfort than to be at loggerheads with one's landlady." Through the smoke that hovered between him and the fire John saw the pale, lovely face of Odette. "Would you mind telling me exactly where it was?" "I can show you. Come over to the window. We must switch out the light of course." Together they advanced to the window. "Wait until the beam comes from the light-house," said Mrs. Manvers-Pollock importantly. "There," she said, as the great orange shaft of light swept across the sky and vanished behind the headland. "That's it; now it's gone. But I ought to have pointed out the rock I meant; we must wait till it comes again."

Blood Brother to an unknown patriot

He steps away from his daily work, rolls up his sleeve and cheerfully donates his blood - so that some unknown brother or sister may come back again from under the black shadow of death. Through the efficient services of the Canadian Red Cross, his blood is speedily transported in dried form to be used for transfusions in Britain, Russia, Egypt or wherever war's shock takes its toll.

Ford of Canada honours all blood donors; especially those who come from the ranks of Canada's great army of production workers. At Windsor, in the Ford of Canada blood clinic, many thousands of Ford workers have already made more than 7000 blood donations. So that this great work - binding Canada to her strongest and sisters of other nations with the Cross needs your help.

The need for Red Cross help is now greater than ever. Let Canada's response be quick and generous.

INCREASING COLONY PRODUCTION

(Experimental Farms News) Among the factors beyond control of the beekeeper are abundant nectar and suitable weather conditions. The most important factor for which the beekeeper is responsible is the production of strong colonies of bees in time to gather the honey harvest, says C. A. Jamieson, Bee Division, Central Experimental Farm, Ottawa. Increase in unit production may be secured by adopting the following general plan. All colonies covering our frames or less should be united to those of medium strength in the spring. The queens removed from the weak colonies may be placed in mass for emergency use later on. In regions where the main honey flow comes late and extends into August, as in the Prairie provinces, strong colonies may be equally divided the spring. The queens introduced to the queenless hives during May or early June. In Eastern Canada and British Columbia where the flow commences early, a two-queen system of management may be adopted on all strong colonies during the first week in May or at least four to five weeks before the main flow. Detailed information on two-queen system may be obtained by writing to the Bee Division, C. E. F. Ottawa. Experimental results have indicated an increase in unit return when two queens are used. The extra

DAILY DEPARTURES
