THAT BODY OF YOURS

(Continued from Page 2)

In the accident ward, a quick injection of a clear liquid, human serum albumin, made from blood, saves a dying man from shock. In the delivery room a new-born baby is given a complete new blood supply to halt a possibly fatal battle caused by Rh antibodies in his veins. A boy who is a "bleeder" is given an injection of a blood product that enables him to have diseased teeth removed.

An elderly man gets a series of 12 injections of a pint of blood within two days, as much blood as you have in your whole body. This new fresh blood will pull him through a dangerous operation. All the above wonders of the blood were unknown less than 10 years ago.
