

Kidney Trouble?

The waste material which the kidneys are intended to remove from the blood, if allowed to accumulate in the system, poisons the blood and thus produce deleterious effects.

If from over-work, exposure to cold, or some local injury, the kidneys become congested or inflamed and cannot perform their functions, the system becomes filled with uric poisons.

Whenever a dull, heavy pain is felt over the region of the kidneys for any length of time, accompanied by a sallow complexion, loss of appetite, decrease of weight, and a puffy condition under the eyes and in the ankles, a chronic inflammation of the kidneys must be suspected, and if not relieved promptly chronic Bright's Disease will certainly develop.
