You Can Have Brighter Teeth!

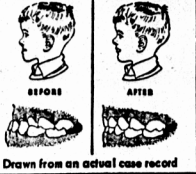

Impartial laboratories made hundreds of tests. Scientists checked their findings with photoelectric measuring devices and authorized this statement: PEPSODENT POWDER PRODUCES A LUSTRE ON TEETH TWICE AS BRIGHT AS THE AVERAGE OF ALL OTHER LEADING BRANDS... BRIGHTER

THAN ANY OF THEM—BAR NONE! These results have been double-checked by identical twins who made practical in-home tests... by technicians in dental clinics... by dentists in their own offices. The result is always the same: Pepsodent Powder with Irium makes teeth far brighter.

You Can Change a Child's Face!

This young boy, for example, had badly-arranged "baby" teeth that made his lower jaw protrude... threatened to affect his future looks. But modern dentistry, by corrective treatment, improved his looks... made the permanent teeth come in properly, too. Yes, dentists can do wonders in straightening crooked teeth. Or, like the movie stars, you can have chipped or broken teeth recapped. So watch children's teeth carefully. Visit the dentist regularly. For it's the truth... a child's personality and future may depend upon the condition of his teeth and how bright and clean they're kept!
