

Dirty Fingers from p.5

Martin are presently employed maintaining computer systems, pricing inventory, evaluating management control systems or posting accounts receivable.

"The experience will be reflected in our next year's work," said Fitzpatrick. "It will help identify areas that will require greater emphasis in our study program."

The majority of students selected for this program have a high academic standing and are able to handle the

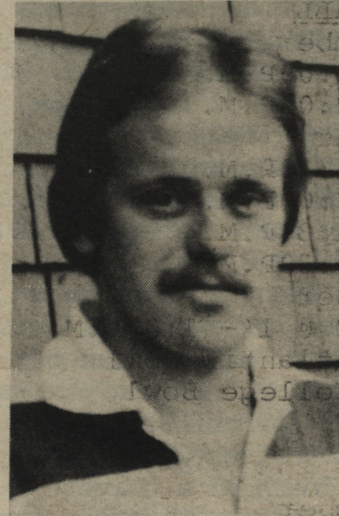

work experience with the minimum of supervision.

BRUCE MARTIN

It's a real pleasure to work with these students, said one of the employers. "As a business person I don't have the time to 'hold someone's hand' while they learn the job; with their academic background and the professors working as consultants they produce some excellent results. This program provides an opportunity to get caught up on some of the projects we dream of in the winter months, but never seem

to have time to complete," he said.

TONY GOULD

RAIDS RAIDS!!

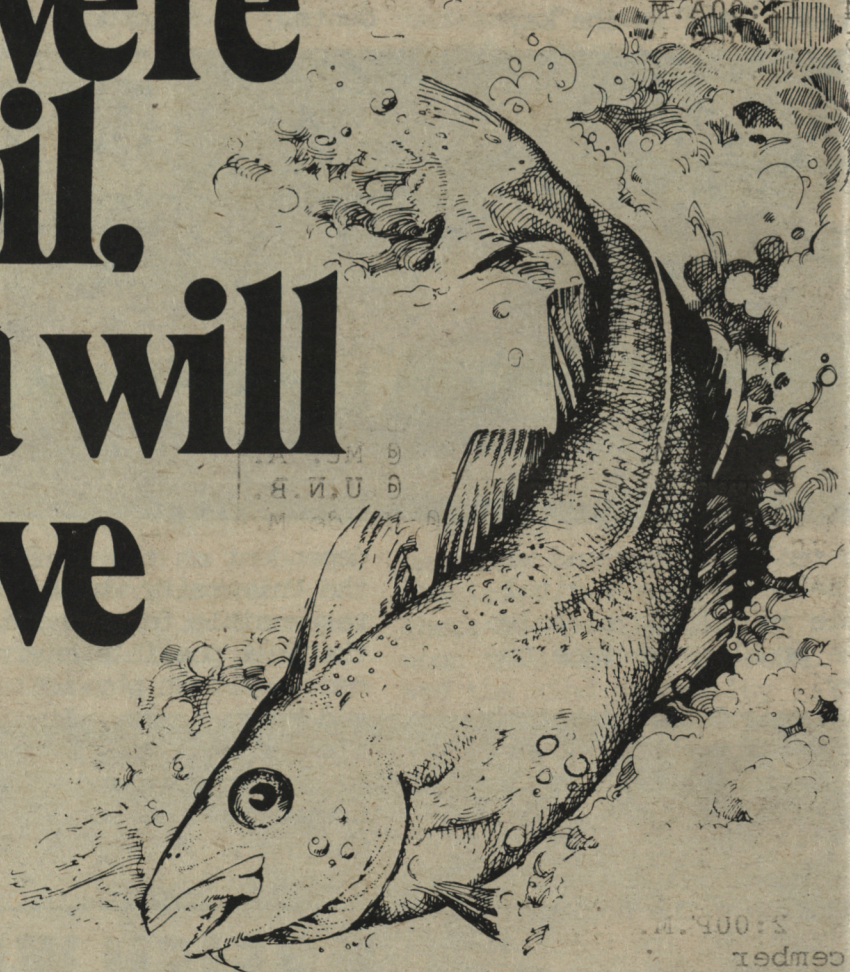

On Monday, Sept. 11, 1978, the girls of Bernadine raided Marian Hall. They brought confetti and various other articles along; a lot of water was thrown around.

The guys of Marian Hall cleaned up the majority of the mess i.e. the water, and left the rest. The next morning the maids entered Marian, and they thought the mess that was left was "the worst" mess in years.

On Wednesday seven cleaning women were put in Marian to clean up this "horrible mess". The confetti, according to the staff, was glued to the floor and the walls and had to be scraped off with paint scrapers. On Wednesday night the guys of Marian raided Bernadine - with confetti - and again the majority of the mess was cleaned up but again, according to maintenance, it was a horrible mess.

A meeting was held between House presidents, maintenance and Student Services. What came out of this meeting was that this year's resident students were to be made an example of. Each resident in Marian and Bernadine was fined \$1.00 (a total of \$200) to be put toward the expense of cleaning Marian and Bernadine halls. Also, in the future when there is a raid, the mess must be cleaned up immediately after to the satisfaction of Maintenance or else the cleaning fees will be charged to the respective committees.

When we're out of oil, Canada will still have the sea

The 200-mile fisheries management zone has given Canada the opportunity to become the number one fish exporter in the world. For the country as a whole, this could mean a growing resource industry that could provide the sort of economic stimulation that has come from other resource industries like petroleum and mining.

Compared to most of these other resource industries, fishing has the advantage of being renewable. Oil wells and mines are eventually exhausted. A well managed fishery resource grows.

For Atlantic Canada, the fishery opportunity could mean thousands of additional jobs in the fishing industry. For other companies that service and supply the fishing industry, the opportunity could mean more work. Taking full advantage of the opportunity involves a number of complex considerations and policies. One consideration is the need for a reasonable balance between the inshore fishery and the offshore fishery. The existence of both is essential. There is room for expansion in both the inshore and offshore sectors.

Policies that recognize the need for this balance, and that recognize that competing internationally requires size, expertise, technology, financial resources and continuity of supply throughout the year, are essential to taking advantage of the opportunity.

There is a time limit. If Canada does not move quickly to develop the vessel technology and expertise required to catch more fish within our jurisdiction, we will continue to see a large foreign fishing fleet in our waters — perhaps for all time. The opportunity will be lost. As interested and concerned organizations involved in fishing, H.B. Nickerson & Sons Limited and National Sea Products Ltd., would like Canadians to know more about our industry and the important economic opportunity it offers. This message is one in a series aimed at providing that information. For additional information, please write to the Post Office box number that appears below.
